STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. :) This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars

in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

> > ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------ > >

Step 1) You do not need to retype this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste.' This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay

anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** > > HERE'S HOW $6.00 DOLLARS TURNS INTO THOUSANDS!! Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies,

that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday? JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will really work. GOOD LUCK!!!

I've come to conclusion people's brains are being affected by environmental pollutants, pesticides in food, or microwaves from all the cell phones. I mean it. Kids all over internet can't spell simple words, articulate or make any real sense out of things. I just don't know. It sure seemed to me people and kids were much smarter just 20 years ago. I don't get it anymore. It seems the seams of the world are slowly rotting away. No I'm not surprised he finds 20 new morons every week....

Lucky

Don't know why you're getting defensive.

I didn't imply a conspiracy, or that profit was a bad thing. I mentioned Lowe made a similar decision.

If they couldn't make a profit, they'd have little incentive to make the radio.

My guess is they expected leaving the parts out of the radios for people who didn't care about the port would do more for the bottom line than selling the accessory for those who wanted the capability.

First, my thanks to Laura for asking a question that guys probably wouldn't ask anymore than we would ask directions if lost. In both cases we seem to be satisfied with wandering around.

Also, once again thanks to Joe for a somewhat complete answer to Laura's question. (I'd love to get Joe over here for a long conversation and just pick his brain for a few hours.) But I would like an even more complete answer. Joe and others seem to feel that you can't just lay a wire on your roof and hold it down somehow and still get better reception that you get with the whip indoors. I'm thinking you aren't satisfied with that answer. If you are, I apologize. I'm not satisfied.

I've heard all kinds of people suggest that you can tack a wire to the fence in your backyard and run a wire to your radio and get decent reception or maybe just better reception. "Better reception than what?", you ask? Good point. I guess I don't recall what the alternative was for sure, but I think it was one of us neophytes trying to get away from the whip again. And I haven't heard it just once; I've heard it many times. Did they not actually mean tack it to the fence? Did they really mean use stand-offs and attach it to the fence. I don't think so, because most asking the question were trying to find a way to hide the antenna from the neighbors or the homeowners association.

I've heard others say they live out in the boonies and have laid 1000 feet of long wire on the ground and obtained terrific reception. (I suppose a thousand feet of any kind of wire is bound to receive something!) This seems very much like laying a wire on the roof of one's house with one major difference: out there in the boonies you would have less interference from the junk most of us have in our homes and those next door to us.

Finally, I assume Laura was talking about laying insulated wire on her roof to improve reception. I'm not sure that bare wire would be a no-no (heck, I'm new to this stuff, too), but I've heard the type of wire doesn't really make that much difference (within reason). I suspect this large roll of #14 solid, insulated wire used to wire homes will work just as well as most and better than some.

Then we have that connection thing. The guys who have been into this hobby for a while assume we all know how and where to connect the downlead to the main antenna wire. My head spins with all of the detail, but its kind of fun searching for answers .... especially when you have a bunch of people who you can drag them out of.

All I'm sure of is that the Wellbrook is in my future.

Harlan

By today's standards, Pat Buchanan is ''Left Wing''.  Hell, I guess
I'm a Communist.  That doesn't change the fact that New Orleans will
soon be like Venice.

And Kenwood was another maker that sold the 232 interface separately
for it's radios.

I suspect that the decision by all of the radio companies to market it
as an option was mostly an atttempt to keep the initial price as low
and competitive as possible.  I think the companies understood that
only a small group of enthusiasts wanted features like a 232 interface,
voice synthesizer or 500hz filter.  Adding one or more to all radios
could have pushed the price beyond the competition.  While profit is
certainly their motive in selling radios, I don't think they separated
the 232 adaptor solely as a way to eke out more markup.

I live in an apartment complex where no outdoor antennas are allowed. I put push pins in the wall around the window in my room and got 100' of hookup wire wound around it. It works fairly well, but with DSL in the building, I don't listen much <s>. Regards

Good question, given that the vast majority of my listening is on SSB,
including some SWBC stations with QRM on one sideband - BBC on 12095 for
example - what do PBT and IF Shift have to do with SSB performance?
If they were important surely they would be standard items in
professional receivers?

I agree that they can be useful on occasion for getting rid of some QRM,
but they are hardly a requirement for good SSB performance.

I have, among others, the HF-150, R-5000, Plessey PR155, Eddystone
EC-958: none have PBT and only the R-5000 has shift which is very seldom
needed, the filters do most of the work. My HAM rigs have both and also
are seldom required.

Regards
Dave

  I would be tempted to think that there is something seriously wrong if
you have to use PBT and shift to be able to listen to SSB stations.
Either your receiver or local noise environment need to be looked at.

The only other option I see is that you are operating your receiver
incorrectly. I have an "older" acquaintance who has a similar problem
but insists on listening to SSB with a 16kHz filter - he needs all the
help he can get since he refuses to use the correct filter(s).

Dave

Here's three low visibility antennas I've tried.

1. Find the biggest outward facing window and run wire around the perimeter. I used tiny cupholders with suction cups on the bottom at each corner of the window.
2. Run a wire around the baseboards of your listening room and any other that you can get away with and tuck it down into the carpet.
3. A reasonable outdoor antenna can be made from magnet wire. It is so thin that it's all but invisible. If you can toss the end over a tree, so much the better, otherwise dangle it down the side of the building with something to hold it in place.

Number 2 was the best performer.

That's funny...I was debating the other day whether I should delete my
library of QBasic programs or not. I think I'll keep it, actually.

BBSs and Telnet are/were near and dear to my heart - those really
were the days.  Remember Fidonet?  (getting all choked up now, heh heh)

The "cyberworld" (as it existed 15 years ago) was a friendlier, text-based
world.

73,

Steve

Dear Harlan and Laura,

You are correct in stating that we "old-timers" tend to assume that newcomers to the hobby know all the "basics" we know. That, as you state, is not the case.

Antennas are the MOST important item in your radio arsenal yet are the LEAST quantifiable; in other words, a great antenna at one location may turn out to be a "dud" at another. Even moving an antenna a FEW FEET(!) in either direction may make a great difference in reception.

How are you going to accomplish what you want? As I stated above, only "trial-and-error" will do. That, as you can surmise, can be a real pain in the neck (sometimes literally!).

All anyone can do is research the various antennas which might be suitable for your particular location and requirements and then try one or more. Obviously, if one has restrictive covenants, an outdoor long-wire antenna is "out" unless it can be camouflaged (and then, often, its performance is compromised), so one has to make allowances for his/her particular situation.

With an abundance of local electrical noise, it is important to find the source and to see if somehow it can be overcome. Recently in my location we had two defective streetlights. One, a low-pressure sodium, was fixed by the electic company rather rapidly. The other, a mercury arc-vapor one, was not fixed for several months; I had to call the town hall and the electric company quite a number of times before this light was fixed. Having those defective lights was adding "insult to injury" at my location already awash in electrical noise. (Too bad there isn't an electrical noise reception hobby. Just imagine being able to tell your friends "I picked up a high tension line from 10 miles away!" Boy! What fun!)

To get to your original query, insulated wire makes a good outdoor antenna. It should be run straight; the longer and higher the better in general. (But beware: a great long wire, suitable for a good table-top short wave radio, may badly overload a portable. Your antenna MUST be "matched" to the particular receiver with which it will be used. Common sense prevails here.) The wire should terminate at both ends to ceramic (or similar) stand-off insulators. (Remember to affix those insulators to connections with strain-relief.) The lead-in wire should be connected at one end and that wire run to your receiver. The simplest lead-in is just another piece of insulated wire attached to the + terminal of your wire unput (on a table radio) or affixed to a 3.5 mm plug (for a portable). If you are using a table radio, you can experiment with a ground. Sometimes it helps, sometimes not. The best ground is heavy copper wire attached to a metal rod driven about 6 feet into the ground (at least in my experience). A portable radio does not need a ground. IN ALL CASES, when using an outdoor antenna, you MUST have lightning protection. (All radio shops can help you along those lines.)

There are, of course, many other types of antennas: dipoles, Beverages, vertical, tower, etc. Your call.

The best thing to do (and here I shall brook no argument) is to buy several of the better books on antennas, such as Joe Carr's book (available from Universal), PASSPORT's 'White Paper" about antennas, and some others, and read them several times. The more you read, the more you will know and understand. Does all that take time? Yes it does and one could argue, "I'd rather be listening than reading and learning all that stuff!" But unless you are willing to learn and then experiment with antennas based on your knowledge, no matter what receiver you own, you will never be able to use it to full advantage.

Once you have done all this (and it takes time, effort, and experience, of course, for which there is no substitute), then you too will be an "old-timer" like me!

Best,

Joe

They're just the features you've learned to use to compensate for problems
you've faced.

On my 7030+ I've installed exceptionally good filters with very steep skirts, so
I rarely need to tweak the PBT to eliminate interference.

But the real reason I added those filters was the ones that came with the radio
were too wide or too narrow for me.  The fact better filters simplified using
the radio was just a bonus.

On the Harris, I just use the sync detector and coherent AGC and it sounds beautiful.

The HF-150 is one of those radios hardly anyone complains about - I never bought one, but I spent a while looking for the Europa version before I ended up with my 7030+.  I wanted as much performance as I could get in the smallest possible package, and it had to be reasonably practical to run on rechargeable batteries.

I'm very happy with the decision I made, but if I'd found a HF-150 Europa first, I probably would have gone for it. (and then I'd probably have tried the 7030 anyway)

Hello Greg.

Check back for some of my previous posts as well as some others in the archives.

I live in a small townhouse with covenants similar to yours. In addition, I am "plagued" with local electrical noise.

My two best solutions for a table-top radio similar to yours are:

1) The AOR WL500 Window Loop Antenna (an excellent antenna) and,

2) The Wellbrook ALA 330S Active Loop Antenna (the very best,

peformance without parallel)

My (and other's) previous posts, as well as the new PASSPORT TO WORLD
BAND RADIO and the new WRTH, will give you all the details.

Best,

Joe

I subscribe to a couple Majordomo lists, one of which is
baswaplist@foothill.net.   To subscribe send email TO:
majordomo@foothill.net
 etc.....

There still out there.

It's been starting at 01:00 and fading out after 02:15 or so here in Seattle.  Makes taping the science program slot a pain in the arse, as you get the first few minutes and then it degenerates into noise.

Things were a lot better Wednesday for the BBC morning frequencies.
(What a difference two days makes).  7160 was 10 dB over S9 about
16:00 UTC.  Maybe it'll be better for the evening stuff.
Added note:  Nope.  Sigh.

That particular station is Radio Canada International's DRM trasmission.
It should go from 9.795 to 9.805.

Other more narrow signals that sound like it are frequency division
multiplex telegraph signals.  They usually sound a bit more ragged.

In both cases, they're a forest of closely spaced (100 Hz or so) FM
or Phase modulated subcarriers.

Is that a pre-WWII tube radio?

A ferrite rod loop stick is both the antenna and the tuning coil for
the first RF amplifier (if the radio has one) or the mixer RF input.
So you'd have to go into the band switch and disconnect the tuning coil
for that band, and then rewind the winding on the loop stick for the
same inductance. Not worth the effort, IMHO.

You could make a tuned loop stick out of it by connecting the right value
of variable capacitor and then add a link winding of a few turns that
hooked up to the antenna and ground inputs. But that's yet another knob
to twiddle. (You'd probably be better off with multi turn wire loop a
couple of feet across).

Wow, the population of Malvern, England must really have been cooked over the years with the assorted high power RADAR systems operated at the Royal Radar Establishment and the other stuff at the Telecommunications Research Establishment (The names and roles have changed several times over the years).

ISTR that the radiation was intense enough that during the coronation of Elizabeth II a fascinating and artistic? display of gas discharge tubes was erected and powered solely by the incident radiation. Certainly during my time there a neon or fluorescent bulb did not require wires to work.

Also the folks around Cutler, Maine with the 2+ Megawatt VLF transmitter which has been running for several generations must be showing some signs, as should the folks around Jim Creek etc. etc.

There are multiple places with transmitters on these frequencies running many, many times the power of any portable device - they have dedicated power lines or huge dedicated generators which obviously far exceed the capability of any transportable device.

But, I think I'll put an aluminum shield on my front lawn to protect me from that long range radar I can see across the field, trouble is there is a high power VHF TV transmitter beyond my back yard - maybe I'll dig a hole and line it with copper? They both use back-up generators which would require a very large truck to move and consume large quantities of fuel so I suspect they out-perform any portable 'bubble'.

Dave

> Hi Lucky,

I build most of my receivers, including the crystal filters- the Lowe being
the exception. None have PBT but the do have excellent 8  to 12 pole crystal
filters with exceptional group delay- I have never missed PBT on them or the
Lowe. My IC756 PRO has tiwn PBT and although it  is occasionally a help, I
have yet to find a station that I can copy on the PRO that I cannot copy on
the Lowe or the homebrews.
Bottom line- I'd take better crystal filters over PBT any day.

Yes, he's in read bad shape.  I bet he won't last more than a couple of weeks.

If Doc's affiliates in the U.S. drop him, he still has his transmitter in Anguilla that can broadcast him 24/7.  Heck, on my radios, that transmission is much stronger on 6090 than the one from KAIJ, and I'm only about 450 miles away from Dallas.

HJS,

.

The process is called Cost Benefit Analysis (CBA).

.

At the time that these Receivers were made the number of Buyers that would have been motivated to buy a specific Receiver just because it had this specific feature 'built-in' was small.  The reduced Cost of the Receiver (Lower Price Point) by not including this feature and offering it as an Option for the few that would want it; against the total number of sales an overall profitability of the product.

.

At least back then; Market Analysis must of identified that an RS-232 Adapter/Interface was not a Selling Feature that would motivate most sellers to "Buy" a specific Receiver. Yes some would... but most would not.

.

Look at a current sample of new Table Top Receivers that have been offered for sale within the last five years. How many have a built-in Computer-Interface; and how many have not.  In todays market it may be a Selling Point for many buyers; and the cost of having one built-in may now add little to the overall cost of the Receiver at it's current Price Point.

.

Now consider a sample of new 'portable' AM/FM Shortwave Radios that have been offered for sale within the last five years. How many have a built-in Computer-Interface; and how many more have not.  In todays market it still is NOT a Selling Point for most 'portable' AM/FM Shortwave Radio "Buyers"; and the cost of having one built-in does Add-to-the-Overall-Cost of the 'portable' AM/FM Shortwave and drives up it's current Price Point.

```
.
At any given time in a Market there is a Balance between:
-  The Manufacturing Cost of the Product
+  The Price Point of the Product within the Market
=  The Value of the Product as 'perceived' by the Customer
.
jm2cw ~ RHF
 .
 .

Just wondering, as I want to get the most out of my radio.
Thx!

What a load of crap, anyone with even a little radio knowledge will read this as pure nonsense. When did whales start hearing radio waves?  And what the hell is the mix of VLF "Ver Low Frequency"  ULF "Ultra Low Frequencies" and UHF "Ultra High Frequencies" got to do with Microwaves "Super High Frequencies"?  I live a few miles from a 50,000 watt MF "Medium Frequencies" station at 700 Khz, theres several Mega Watt level Television stations within a few dozen miles, not to mention countless FM Broadcasts on every frequency from 30 to 1300 mhz everywhere.   Our whales arnt hearing any of this ;-)

It also lets people see if a lot of his positive feedback is from people
buying $5 connectors.

The LEM206 DXpedition report from Arctic Finland can now be found at http://www.dxing.info/dxpeditions/lem206rep.dx and the log at http://www.dxing.info/dxpeditions/lem206log.dx

For us, pretty good reception of US AM stations throughout the entire week was the highlight. Those of you who are interested only in shortwave can still find one interesting logging, check out 3815 kHz under you-should-know-which continent...

We have only begun to review the huge number of recordings, so I expect the log to grow by at least 50% over the coming weeks and months. However, I wanted to give you a preliminary listing as soon as possible. I will also be adding some more slogans and sound files later on.

73s
Mika

Whales have been beaching themselves since time immemorial for reasons unknown, fool!

Do a bit of research before you shoot your 'tard boy mouth off.

Oops, sorry about that. I didn't realize it, as I haven't followed the
discussion here for a while.

73
Mika

My review of the wellbrook ALA 330S loop antenna so far.

first things first i was going to test this antenna mounted in my loft
but the loop would not fit through the loft door opening.

So my first test was carried out as follows.
i stood the antenna in the middle of my room floor.
i had the 330S connected to an antenna switch so i could flick the switch to
compare the performance between other antennas i have mounted out doors..
when i had the 330S connected up like this just sitting in the middle of my
room floor.  my other antennas did perform better signal wise but the
wellbrook was much quieter but the signals were a lot lower.....one thing i
did notice is that why i was useing the wellbrook 330S in this position is i
tuned into a distant signal that i could hear why using the 330S then i
flicked the antenna switch between my two other out door antennas and i
could only hear the signal using the 330S as the noise was a lot less....
this is as far as i have progressed so far.....
my next test will be to locate the antenna on a fence post in my back
garden..
then when i get time i will be mounting it about 50+  feet high...

as for my circumstances my farther in laws cancer treatment well.

he was admitted to Hospital on Monday 24th and was expecting to have his operation first thing Tuesday. his operation was going to take 12+ hours .. well on the Tuesday the doctors got my farther in-law all ready for his operation they went as far as wheeling him down to the operating room they had injected him with strong pain killers and relaxants then just as they were to wheel him into the operating room the operation was cancelled due to the intensive care bed had been taken and he was sent home later that day and he now has to wait for another couple of weeks for his operation and it could be cancelled again.  how fucking cruel is that this country is going to the wall the health service is totally shit. one day i am going to get out of this god forbidden country......

As soon as i have time i will test the Wellbrook 330S mounted out doors.....

all in all the antenna seemed to perform better than my out door antennas but the signal was low but then again it was only sitting on the floor....

John

Kind of a mixed bag from the reviews I've read. May be a passable to good performer on higher bands, but poor on the lower ones and I remember reading some complains about it being noisy. Best to do a google groups search and read away for a few hours.

I've seen several new antennas over the years, and while they will catch signals, they don't turn out to be the one antenna-that-works-all-bands equally well as is usually claimed by the maker.

Reference Materials Wanted

I am interested in pirate radio, scanning, LPFM,
clandestine radio, free radio, community radio,
shortwave listening, utility monitoring, etc.

I would like to find books or CDROMs dealing with
these topics.

For example, used Monitoring Times CD's or WUN, etc.

Thanks.

http://members.cox.net/bshort4/

That's the one I have, and it works perfectly except that the dial lamp does not work.  I'm not sure if the bulbs are burnt out or what.  It is a fun radio to play with.

The uP's (microprossors) on many devices can make a clicking sound on a
radio. I recently discovered that one of my battery chargers does this.
It wouldn't hurt to have the TV checked out though.

I have too many 24 hour clocks so I am selling one. this is a real nice
model from radio shack. AC operated. blueish florescent digits.

```
real nice and only $15 plus $5 or so for shipping (lower 48, moew elsewhere)

email me at mmaghakian@yahoo.com

There was a great television documentary on PBS by Ken Burns of
Armstrong's life . It was called 'Empire of the Air'. It was both
inspiring and tragic.

I mounted my balun in a plastic electrical junction box with a cover
gasket, the kind used with plastic conduit. The ground wire to the rod
is about 2-feet long.

When I saw the photo of the 5900 I thought the thing absolutely mint, absolutely collector quality, absolutely jes great, on the outside. Can't rate the inside and workings until I would have heard it.  But them outsides is absolutely....yeah!  I would have been bidding if ebay had not totally screwed my account to the poing that it is unsuable and I can't get a new account using my real name and my real address.  I will not open a false account.  screw ebay.

From the DX-398 Manual at URL:
ftp://80.162.141.166/manuals1/radio_shack/Receiver_-_DX-398_Owners_manual@8.pdf

TUNING SSB STATIONS
Your receiver receives both USB and LSB transmissions. Follow these steps to receive SSB stations.

The page (18) goes on to give a step by step tuning procedure

"making it  understandable" is covered as follows (from the DX-398 Manual

Note: SSB stations sound distorted when you tune to them in the normal SW band. To help you find SSB stations, watch for deflections on the signal strength indicator. Since SSB is transmitted with a suppressed carrier, the signal strength indicator will move more quickly when there is a transmission and more slowly during pauses in the transmission.

When you have located an SSB station, press AM MODE  to receive the transmission. Repeatedly press AM MODE  to switch between USB or LSB transmissions (try LSB for frequencies below 10 MHz or USB for frequencies above 10 MHz).

4. Set STEP  to SLOW  then readjust MANUAL TUNING slowly for maximum intelligibility.

Is this mainly a program listening rig?
How is the SSB on it with no PBT or shift?

I guess you can't even compare it to a Drake R8 huh??

Any opinions?

Thanks
Lucky

That's strange, since they're there, albeit with what seems to be reduced power. Tonight, at 0200 Jan 27, the signal was definitely there, but only popping above the noise threshold occasionally. That weird heterodyne like noise is still there on 6000. I can null it with USB mode and hear Havana underneath it, but only weakly.

>

Now that is weird. I've also noticed that the 9525 frequency usually used from 0200-0400 is going off at 0300. Apparently they've shifted its schedule up one hour. I haven't checked to see if 6135 is now signing on at 0300. Passport says that 12095 at 1500 is to Europe from "various locations", probably Rampisham at this hour.

And it's probably tuned to NPR or Air America. :) He says he has several

SW radios, but most, heck, ALL of the stuff he posts is articles posted elsewhere on the internet about politics, Iraq, or various left wing causes. By the way, if anybody out west is hearing Air America on 1240 khz (MW band), it's "Talk City" (not sure of the call letters) from Sacramento, California.

You're in South Africa, John? (My newsreader snips off sigs in replies.)
That's pretty damn good. 58 watts isn't a whole lot of power.

Of course, in these sort of suits, it's always the LAWYERS who make out like bandits while the guys represented get peanuts. I've heard of lawyers in class action suits making NINE FIGURE paydays (over $100,000,000, or $100 MILLION) while each of the people being represented get something like $3 each. Not bad for, what, 10-12 total hours of work. Lawyers are holding our system hostage for big bucks and writing deliberately obfuscating laws (all politicians are lawyers, although unlike John Edwards most have never tried a case) so that

anybody can be charged with anything and the lawyers will make even MORE
in taxpayer paid legal fees.

Actually, I think the HF-150 is great on SSB. It gives you 8 hz tuning increments...very handy.

Steve

And it's not only in America. What on EARTH could persuade a BILLION PEOPLE (Muslims) that blowing yourself and everybody else up and destroying every last vestige of civilization brings glory to God? I think that there's something MAJOR affecting EVERYBODY'S brains, causing them to lose all ability to reason, causing whole ecosystems to disappear, causing frogs to grow tails and extra legs. We better find out what the hell we've done to the world before life as we know it disappears.

Something I intend to experiment with, is running two radials from the
Balun/ground/feedpoint; one under the entire length of the antenna and the
other 180 degrees away from the feedpoint.  Since this antenna was
deliberately located as far from the house as possible (on the property
line), I could not run radials in a 360 degree fashion. But I think if
radials will help at all, two of them (at 0 and 180 degrees) would show
results. Ever try this? The antenna is for 2182 thru 16000 khz marine.

Jack

The SSB is excellent; the synchronous AM, all 4 options, works great; as
do the AM and AMN.

Hi Laura,
You have the right idea <S>. The antenna should be a couple feet above the surface, and connected to supports at either end by nylon cord or something else non conductive. You can connect the antenna to the center conductor of some coaxial cable and run it into the house and connect it to a connector that matches a connection point on the backof your radio. I would connect the wire from the antenna at the end of the wire closest to where you want to connect the coax.

The ventilation units you mention have electric motors in them, and that may be the reason for the interference. If possible, route your antenna wire in a direction away from the location of those ventilators that is not broadside to them. That might help a bit.

Best wishes for your success. I'd be glad to see a post of what you have heard :) mm

PEACE + We are the Providence of God

Extreme Fajitas?  Hmmm, sounds interesting, I must admit.

I was wondering why I was waking up all thirsty and dizzy --- and here I was thinking it was all the vodka of I've been drinking --- silly me.

But seriously, about these EM Poppers --- do you think the CIA would be interested in deploying a popper array in Canada?

First we would program the poppers to make people vote republican, and then get the neo-conservative think-tanks to come up with a way to divert soft campaign funds into funding a contract to deploy thousands of poppers nationwide along the northern border provinces of BC, Alberta, etc.

Then comes the sneaky part, once the yankees are all thirsty and dizzy and voting republican, we set up huge rocket motors pointing off into space at wierd angles and run them night and day, this would alter the earth's spin, and push the geographic pole towards russia, having the net effect of pushing canadian territory into a more southerly latitude where it's warmer so the pot plants grow better.

This information is top secret, I'm relying on the tight knit NNTP community to keep this under wraps.

Years ago when I first came online, if you wanted to join a mailing list, you would normally subscribe to Majordomo, Listserve or Listproc.

These email mailing list programs where difficult to use at first, but after a while they were cool to use.

I wonder which of these mailing program came out first?

I was wondering if anyone knew of a host address, that I could use the NETWIDE or LIST command, so that I could then find a mailing list to join?

I hope that they are not disappearing like BBS & TELNET.  And I hope that newsgroups as we have them do not disappear either!

Some could say, well, people are making computerizing user-friendly.
And I had always said: User-friendly is User Limited!!!!!!!!!!!!!!

Hey, I still use Qbasic and DOS!

It is funny because, even in the computer age, some people could be
old fasion like me. LOL!

73!

A guy 5 feet away waving a knife can close the distance to you in 1/5 of a
second.  I hope that you have the safety off and the gun pointed if you're
not shooting at 5 feet.

I agree. Something is going on. People have become so jaded it's incredible.
You know how many hit and run drivers have hit people on the road here in
Florida and never stop? I see almost every couple weeks. Mother and bay hit,
the driver never stopped. Old man dragged for blovks and killed. Driver
never stopped. Just last night
on I-95, man cause accident, kills mother and daughter, father survived.
Driver got out of the car and ran. They haven't found him yet.

I know I'm sounding like Brother Stair, but I think our whole society and
culture is rapidly fading into one big free for all. Something is going one,
that's for sure...

starman <starman@tech.net> wrote in news:41F75645.281C1216@tech.net:

Dear Mark and Starman, rather than neurose this link into infinity by reasserting that the RS232 Standard was omitted since Yaesu had an insidious plot to overthrow the economy by forcing people to buy the adapter, why don't you offer evidence, in the form of URLs, to pages that discuss the prevalence of RS232 ports on other similarly priced equipment of the time?

Visit here: http://www.dxing.com/rx/r71a.htm for information on the Icom R-71 and R-72.

Here's the back of the Icom R-71

http://www.universal-radio.com/catalog/commrxvr/r71diar.jpg

Here's the back of the Icom R-72

http://www.universal-radio.com/catalog/commrxvr/r72rear.html

Apparently their RS232 Jacks fell of before these photos were taken.

Notice they offer an "OPTIONAL" CT-17 CI-V Level converter. Here we go again, the conspiracy theories will abound, this underhanded manufacturer must have been trying to destroy the US economy by requiring their customers to actually buy accessories rather than incorporate them into the radio, "Oh the Humanity".

Gee, the Drake R8 and the R8A had the RS232 jacks, but they retailed for $400 more. Isn't that special. You pay more and you get more, what a concept.

Does the Lowe 150 have an RS232 Jack, I don't think so!

Strange, I thought that this was an elaborate plan by Yaesu?

The proof is in the pudding. Oh, and by the by, for the correct phrase, please visit here: http://ask.yahoo.com/ask/20020903.html

So you can see, the presence of RS232 Jacks, on equipment of that era, was limited to units retailing for nearly $1000. But why let facts get in the way of a needless gripe?

Walk around outside with the whip extended and see how the interference and
noise is.  If it is much less, but you're still close to the fan farm, then
you may be dealing with interference inside your home.

The best approach, if you have the right property size, is to run a wire as
far away from the restaurant and your house as possible (on top of a wooden
fence works), and use a balun (you can use a TV matching transformer for
now) and feed it into your house with coax.  For your application, outdoor
TV 75 ohm coax will do, and you can get an adapter for the end to go to the
mini-plug.  Radio shack sells everything you need.  Don't forget to ground
the shield with a ground rod.

Those are both bells and whistles, very uncommon even thirty years ago, and only slowly moving into more common appearance, and towards lower priced equipment.

Good SSB means good stability, good selectivity (sufficiently narrow, and sharp skirts) and a product detector.  If it's got that, then it's good for SSB.

The other things may help under some conditions, but people have lived without them.

JP,
```

If IIRC the one Radial that helps the most, is the one
that lays directly under the Horizontal Out-Arm of the
Inverted "L" Antenna.

This is why I suggest that 'if' possible to Flip Starting
Point (Back-to-Front) with the Vertical Up-Leg of the
Inverted "L" Antenna and have the Coax Cable Feed-in-Line
lay directly under the Horizontal Arm of the Inverted "L"
Antenna.

READ - Flipping the Inverted "L" Antenna 'Back-to-Front'
= Better Performance
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2013
http://groups-beta.google.com/group/rec.radio.shortwave/msg/6079890656d94af1

Maybe some one could use some software amd 'model' a
Shortwave Listener's (SWLs) Inverted "L" Antenna with
a single Ground Radial directly under the Horizontal
Out-Arm.

# 1 The 'small' SWL (V1:H2) Inverted "L" Antenna using a
15 Foot Vertical Up-Leg and 30 Foot Horizontal Out-Arm
Plus 30 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.
.
# 2 The 'medium' SWL (V1:H2.5) Inverted "L" Antenna using a
20 Foot Vertical Up-Leg and 50 Foot Horizontal Out-Arm
Plus 50 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.

# 3 The 'large' SWL (V1:H3) Inverted "L" Antenna using a
25 Foot Vertical Up-Leg and 75 Foot Horizontal Out-Arm
Plus 75 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.

Test Results should be provided for these Shortwave Bands :
@ 60M Band ~ 5 MHz
@ 49M Band ~ 6 MHz
@ 31M Band ~ 9.7 MHz
@ 25M Band ~ 11.8 MHz
@ 22M Band ~ 13.7 MHz
@ 19M Band ~ 15.5 MHz

iane ~ RHF

CRYSTAL CLEAR RECEPTION
OVER EUROPE ON 9290 KHZ

If you are a programme producer and would
like to be heard all over Europe on short wave
with a solid signal  look no more.
1/ Operated by KREBS-TV in Ulbroka Latvia,
 It is a Good way to be heard.
2/ The cost is low - 30 English pounds for 1 hour
3/ The frequency is 9290 khz
4/ The power is 100 KW
5/ The transmitter site-Ulbroka near Riga in Latvia
6/ Beamed to Europe
 For more information visit this website
http://www.listen.to/emr/ulbroka.htm
If you are interested in this relay service please
E-mail - info9290@blueyonder.co.uk and we will
Pass your message on to KREBS-TV in Ulbroka.
GOOD TRANSMITTING

(from Tom Tom EMRSW@blueyonder.co.uk)

Hello Laura,

The idea of walking around your area (and the roof) with your radio in hand to see if interference is greater or lesser at various locations is sound. See if you can find a place which is relatively noise-free. I'm afraid a length of wire just lain on the roof will probably be unsatisfactory; it should be raised much higher and must not touch anything. It should be attached to ceramic (or similar) insulators and those insulators affixed to supports, with suitable strain-relief. You can use coaxial cable (RG-6 or RG-8) as a lead-in, or you can even try a twin-lead (300 Ohm) wire and terminate that in a 3.5 mm plug. If you do use coax, I have found that Radio Shack does indeed sell adapters for attaching it to your radio. I have used a BNC connector at the end of coax, then a BNC to RCA adapter, and finally an RCA to 3.5 mm plug adapter to connect an outdoor antenna to a portable radio (I did this years ago when I was able to have an outdoor antenna; it worked just fine.) I have done something similar to allow my Wellbrook antenna to be used with my Sony ICF-SW7600GR.

If, however, you find that in your location there is nowhere without electrical noise, you've got problems.

Are those restaurant ventilators ever turned off, perhaps in the middle of the night? If you try your radio then and find no interference, you've found its source.

If those machines are indeed the cause of your interference, the only type of antenna which can overcome that (to a greater or lesser extent) is a balanced loop design, such as the Wellbrook, and, as you know, they are expensive (but well-worth the money if you can afford them). What you'll spend or do depends just how serious you are about short wave listening.

If you find that placing your radio (using its whip) near a window on the side of your house farthest away from the ventilators results in lower noise levels, you might try an AOR WL500 Window Loop Antenna which can be mounted in that window. It is a loop of unbalanced design, according to PASSPORT, but may help reduce some local electrical noise. In my case, I tried it before I bought the Wellbrook ALA 330S and found it to be a great help in my location, better than any other antenna I had previously tried (I still use it with my Satellit 800), and it is a great match for a portable radio (the Sony AN-LP1 is also a good antenna for portables, but, in my experience, does not reduce local electrical noise at all). It terminates in a BNC so the Radio Shack adapters I mentioned above will easily adapt that antenna to your radio. It may be worth a try though it, too, is expensive and, frankly, is no match for the Wellbrook. If the WL500 works fairly well, then the Wellbrook will work very well.

I hope that is of some help to you. Some of the other posts here also have good ideas. Antennas are "scientifically" designed. But "science" is no good at all when it comes to determining what will work at a specific location. Only trial and error will tell you that.

All the best,

Joe

I'm currently using a Grundig YB 400 but I'm sure this would happen with any shortwave, but my problem is the clicking of the TV nearly across the whole spectrum from 1-30mhz.  There are spots where it doesn't bother much and if the signal from the radio station is strong it is not a problem.  I was wondering if an outside antenna would improve this or just make it worse? If I turn on the TV and listen to the radio it isn't there so I'm assuming it is from the remote control part of it.  I used to have an old TV with out a remote and it didn't bother.  I have thought of getting a better radio at times but this clicking has made me wonder it it is worth it.  If it weren't for watching my own videos and the news, I would know what to do with the TV, but I really don't want to see if it will support the weight of a bull dozer just yet.  Got any ideas as to what I should do?  By the way, this is heard even when the AC line cord is not used.  Ric in Wisconsin.

HI Ric,
If it were me, I'd be very careful with that TV. If the clicking sound is coming from the TV and not the radio and the sound happens even with the TV turned off and unplugged, it may be an electrical arc in the TV - that might be a fire hazard.

If you feel it would be worth the expense you could take the tv to tv shop to be checked out. I don't really know what else would make a clicking sound on a tv.
HTH
  PEACE + We are the Providence of God

It's a temporary setup, So I just used a wire nut (Marrette) filled with Penetrox, an anti oxidant grease, before it was put on the twisted coax centre and the steel line. I positioned the closed end upwards, so that it wouldn't collect rainwater.

A ground wire then runs down to the clamp on water pipe underneath. That's the only side I have the coax grounded on. Then the coax runs through the attic and down to the push button switch selector, which feeds the 'radio of the day'.

A matching transformer didn't seem to make much difference

mike

Telnet is still active. Also still a number of BBS's out there (FidoNet is
still active as of a few months ago).

You're right about operating systems. It may not have been pretty, but I
could do a lot more with DOS and BASIC. Besides, it gave me a feeling of
accomplishment to build things myself from the start.

Someone else might chime in here on this one but if I'm not mistaken using the coaxial cable in that fashion actually defeats the purpose as it should be terminated in its characteristic impedance at both ends to be effective.

I seem to recall some effects of capacitance coming into play when used as you've described, and what happens there is that the coaxial cable is simply acting as a very long capacitor which might actually act as a block to some frequencies.

I'll have to look through the literature when I get a chance.

Depending upon how you have it hooked up you might not have noticed any difference with a matching transformer if it was not attached properly.

I am the proud owner of a Zenith Transoceanic R7000 portable radio. This
Zenith is the last run of radios when they shut down production of this
famous series ....well the band switch lost its click-click,
Now where in the world are you going to get this fixed?
Well come in Mr Allan Jesperson of "Great Northern Vintage Radio's"
Minneapolis, MN.
I sent him the radio, he repaired it and aligned and tuned up the
receiver...and I'll tell you what...against my Sony SW77..AOR 7030 ..it
doesn't miss a beat...and the audio quality is wonderful!!

So if your in need of help contact Allan at
http://www.gn4radios.com
By the way he has no idea I'm writing this, but I know how stressed I was,
when the Zenith when South...but now am happy I found this fellow and wish
all you folks to have knowledge of this great service!!

-Thanks,

Bill

I have one of those as well.  Nice radio.  I used it as a kid.
It needs work badly.  What did he charge you for the fix?

fidelity other than perhaps hurting it off moved too far.

The difference between the R8 and the Lowe is that the Lowe is built
tremendously better and the Sync modes work as well if not better.

Hello friends
I'm in a condo.  I just received a fantastic receiver (FRG100B)..I'm
currently running a homebrew "Heli-Rope" Antenna (from June 1971 QST)
hanging on the wall.  Just out of pure curiousity, have any one of you
run indoor antennas?  What kind?  How did yours work?
Thanks 73 Greg WDX9KHY

"Their system uses repeaters placed at every one kilometer, (0.62 miles) and requires power lines to be modified to reduce interference with the data signals. The estimates were based on computer models, and that the data speeds available in a real-world version would depend on how many repeaters a power company used."

Nothing like trying to use something intended for one use for some other unrelated use.  Why would any fool want to put high-speed transmission data on an unshielded single wire feedline that travels for miles in a hostile communications environment? One would think the idea wouldn't get off the professor's desk. Maybe PhD's should harvest rice six months each year to find out what the real world is all about?

What does it have to do with it? There are many SSB stations I would have to
listen to with loads of interference if I didn't have them.
Some I wouldn't be able to continue listening to at all.

Lucky

MICHAEL,
.
"Also, how do I connect a lightning arrestor to the antenna
and how do I properly connect the coax to the antenna ?"
.
Of... Lightning Arrestors and the Antenna Wire to Coax Cable Connection
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2041
.
ZAP - - - - - / \ / \ / \ / \ / \ / \ / - - - - - - >________
Here are several Lightning Arrestor type devices
that can offer some "Limited Protection" in the
event of a 'nearby' Lightening Strike in your area.
.
*  Opek A7516 Lightning Arrestor [ Basic Air-Gap ]
http://www.universal-radio.com/catalog/protect/4618.html
.
*  Transi-Trap LT utilizes a hermetically sealed gas filled cylinder
http://www.universal-radio.com/catalog/protect/1502.html
.
*  Alpha Delta ATT3G50 series of coax surge protectors
http://www.universal-radio.com/catalog/protect/4003.html
.
*   Antenna Super Market "Zap Trapper" Coaxial
http://www.universal-radio.com/catalog/protect/2993.html
.
*  Cushcraft Constant Impedance LAC4
uses a replaceable Gas Discharge Tube
http://www.universal-radio.com/catalog/protect/0614.html
.
*  DEO Receiver Guard 2000U

http://www.universal-radio.com/catalog/protect/1305.html
.
*  Diamond CA Series of Coax Surge Protectors
http://www.universal-radio.com/catalog/protect/2318.html
.
.
THE ANTENNA WIRE TO COAX CABLE CONNECTION :
.
IMHO - The best was to make the Antenna Wire to Coax Cable Connection is to use a Matching Transformer Balun UnUn or what is called a Magnetic LongWire Balun.
+  These devices make the Electrical-Mechanical (Joints) Connections between the Antenna Wire Element; the Ground Wire; and the Coax Cable Feed-in-Line.
+  These devices also help to 'match' the "Impedance" of the Antenna Wire Element to the Coax Cable Feed-in-Line.
+  These devices provide a "Direct-DC-Ground-Path" for any Electrical Discharge pasted through the Antenna Wire Element to earthen ground.
.
* * * Balun Reading List ( Long )
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/337
.
*  RF Systems Magnetic Longwire Balun (MLB)
http://www.universal-radio.com/catalog/antsup/1484.html
.
*  Shortwave Longwire (10:1) Antenna Feeder #SWL-1
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5745940468
.
*  "Universal Magnetic Balun" (UMB) a Receiving (Only) Antenna Balun with a 9:1 impedance ratio by Wellbrook, UK.
UMB=> http://www.wellbrook.uk.com/UMB.html
.
*  Shortwave Longwire Antenna Feeder with balun LWF-1
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5745918363

DX ACE,
.
For me it is not about the End Insulator Failing or the Wire
Failing. I had nothing to do with the design or make-up of the
Insulator or the Antenna Wire. If they fail then that is on
their respective manufactures; not me.

.
However, I do build the "Joint" {Connection} between the Antenna
Wire and the Insulator; and if it fails; then that is on me.
To that end I have a tendancy to OCD in Over-Building the Joint.
.
When building a "No-See-Um" 30 AWG Magnet Wire Antenna with Mono
Fishing Line for Rigging. I build the Wire-to-Mono Joints with
Fishing Line Swivels and Double-Lay and Double Bite (Wrapped)
Knots.
- The Wire may break.
- The Mono may break.
- The Swivel may break.

But the Knots will hold [.]
.
i just try to build the best 'joint' i can ~ RHF
.
.

Why Radial Wires Antennas ? ? ?
.
READ - Radial Wire Antennas - by Peter Chambers
RWA => http://radiodx.com/spdxr/Radials.htm
.
*  Radial Wire Antennas are a very simple and easy way
of obtaining amazingly good radio reception on longwave,
mediumwave and the lower shortwave bands.

.
*  The Radial Wire Antenna is simply a length of wire laid on the ground in a straight line. Connect the wire to the receiver as normal and connect an earth, the same as any longwire type Antenna
.
*  The Radial Wire Antenna's wire length & direction depends on the frequency and direction of the stations you wish to hear.
.
*  The Radial Wire Antenna is not a practical Antenna for your home location, not in a town or city anyway. If you are prepared to drive off to a good location with your radio and wires for an afternoon and/or evening of amazing listening from the relative comfort of your vehicle, then read on.
.
Major Paragraph Titles:
-  Why Radial Wires Antennas
-  Wire Lengths
-  Earthing
-  Impedance Matching
-  Low Angle Pick-Up
-  Directional Characteristics
-  DXing Locations
-  Receivers and Connections
-  The Wire and Handling Multiple Wires
-  Directions, Bearings, Propagation
-  Conclusion

I've had HD2IOA  from Guayaquil, Ecuador    in my logs
as a time standard on 3810 khz. and hear it regularly in my
location.

I'm rather biased toward the 803a (I have a 15 year old
DX-440, myself), which among other things it can take
an external antenna fairly well without overloading.
It's nice for utility work.

I found an old ferrite rod antenna coil in my scrap box and would like
to know if it would be possible to hook it to my  Philco 38-10 ?
It has the usual 4 leads on these antennas and I have no idea  where
these leads should be connected.
Any and all information for my education on these antennas will be
greatly appreciated.
Thanks
James

I suppose if you're serious about chasing DX the cost of a dual axis rotor
system would be small compared to the money you could toss at a radio upgrade.

Personally, I think it would be slick to do a dual axis rotor system with a yagi
for radio astronomy.

Hurrah!  The police and the DA had the good sense to allow
people to defend themselves.  Wonder how many whiney Democrats
will pewl about how they should have let the poor, oppressed
chimps kill them.

I'd say that if you're chasing MW DX the rotor is an absolute 'must
have'; but I wouldn't say this where SW DX is concerned. I was sort of
hoping that the antenna would have directional characteristics above,
say, 4500 khz; but it sure doesn't seem to, at least in my location and
listening conditions. I guess I'll just have to resign myself to an
excellent omnidirectional antenna... :).

 these leads should be connected.<<<

This isn't an answer, just a commit. The ferrite rod in my McKay Dymek DA 5
ferrite bar antenna has only a half dozen or so windings centered on the
rod. The rod (it's been a while since I've looked at it) is aprox 8 to 10
inches long. Rob Mills ~

KVOO,Tulsa is 419 miles (674 KM,364 Nautical Miles,I looked it up at indo.com,Find Distance) Northwest of where I live and I love Western Ranch Music.I can't pick up KVOO (kvoo.com) from where I live on my radio's.My yard area measures about 170 feet West to East and about 60 feet North to South.If I lay an antenna like that on my yard,would that let me pick up KVOO,Tulsa,Oklahoma real good on my radio's? Will that help/improve Shortwave listening too? I would probally need to bury the wire in my yard about two or three inches so that when I mow my yard in the Summertime,my lawnmower wouldn't be snagging on the wire.(one day when I was driving that old reject Clark forklift at Tan Son Nhut,sombody had left a whole roll of flat steel banding wire laying partway in the road.It was just wayyyyy too tempting,,,,, I just had! to get the right rear wheel of that forklift snagged on that roll of banding wire! Accidently on purpose,of course :{)

Unfortunately, many of the stations on that AC6V list are no longer in operation. Many of them have been off for years.

Here is my list of QSL'd time signal stations:

RWM
RID
WWVH
WWV
YVTO, Venezuela
Radio Reloj, Costa Rica
VPS60, Hong Kong
JJY, Japan
HLA, S. Korea
LOL, Argentina
VPS35, Hong Kong
VPS8, Hong Kong
CBV, Chile
BSF, Taiwan
Naval Communications Station Darwin, Australia
EBC, Spain
PPR, Brazil
OMA, Czechoslovakia
OLB5, Czechoslovakia
BPM, China
ZUD, South Africa
VNG,  Lyndhurst, Australia
VNG, Llandilo, Australia
CHU, Canada

ZSC, South Africa
Y3S, E. Germany
Radio Relogio Federal, Brazil

Many of these are unfortunately now off the air. And no, I still do not have a QSL from HD2IOA.

dxAce
Michigan
USA

The Founders were not ''all Christians''. Franklin and Jefferson were Deists. They did not believe in the Bible as any kind of holy book. They didn't believe in unseen forces. The United States is the first Post-Enlightenment government. It is an evolutionary step beyond the shackles of religious tyranny.

I used a Palomar MLB with a tinned lead to the transformer.  Soldered.
It grew small amounts of salt but that didn't seem to affect the
operation.

only radio-mart could get a bidding frenzy on a common everyday
receiver without a user manual

this radio is NOT worth the bidding that is going on. I have seen rare
receivers not get anywhere near this activity.

pathetic buyers ! I would love to sell them a bridge !!!

I bet the frequency isn't accurate in the SSB modes, but he's not going to
mention that!

$275 and still 4-1/2 days to go!

Cuhulin wrote:

KVOO,Tulsa is 419 miles (674 KM,364 Nautical Miles,I looked it up at indo.com,Find Distance) Northwest of where I live and I love Western Ranch Music.I can't pick up KVOO (kvoo.com) from where I live on my radio's.My yard area measures about 170 feet West to East and about 60 feet North to South.If I lay an antenna like that on my yard,would that let me pick up KVOO,Tulsa,Oklahoma real good on my radio's? Will that help/improve Shortwave listening too? I would probally need to bury the wire in my yard about two or three inches so that when I mow my yard in the Summertime,my lawnmower wouldn't be snagging on the wire.(one day when I was driving that old reject Clark forklift at Tan Son Nhut,sombody had left a whole roll of flat steel banding wire laying partway in the road.It was just wayyyyy too tempting,,,,, I just had! to get the right rear wheel of that forklift snagged on that roll of banding wire! Accidently on purpose,of course :{)
cuhulin

Well, there is a type of antenna configuration designed to be lain on the ground or even buried a couple of inches. It is made from coax, and is called a "snake" antenna (recipies are on the web in various places). Don't know how you'd do it - or if you could - with plain steel wire.

But more to the point, as best as I can tell, KVOO is an FM station - I don't see any AM listing for it. The rough figure for maximum reach of reception of an FM station is about 100 miles, as FM is line-of-sight transmission. DXers make FM catches exceeding that, of course, but that would be a rarity. 420 miles? I doubt it's possible.

The "snake" antenna configuration would likely improve your reception, though, of a lot of things. What kind of antenna config are you using currently?

Tony

If it's a resale of this one he bought with the gottahaveit1995 userid for $150
it's another example of him puffing up the description:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5742288776>

The original seller indicated it had some scratches and dings.

radio-mart says the one he's selling is in collector condition.

I'm sure he cleaned it up with something like Windex, but who knows if he fixed
the scratchy audio pot.

I have a feeling that radio-mart paints the cabinets of radios he
resells and that is how he get the scratches gone ?????

he just doesn't mention it !

there are places to get spray cans of custom paint made and I bet he
has a collection of colors for each brand

That's true but it's already been posted.   Too late to add to the
headers. x-no is something you do before you post, not after.

I didn't realize KVOO had switched to FM,I know KVOO used to be on AM
because I could pick it up on my radio's that have AM band at night time
but it would fade in and out.A little over five years ago I bought one
of those CCrane radios that Art Bell and George Noory tout so much.I
thought it would be much better for picking up KVOO is the only reason I
bought that CCrane radio (are y'all listening,Art Bell and George

Noory?) but that over priced,over rated plastic piece of crap CCrane radio didn't show me s..t! so I packed it up an sent it back to CCrane company.Then I bought one of those Sangean ATS whatever it is highest priced (I hate to say this,portable) portable shortwave radios from CCrane,I sent that radio back to CCrane company too.Only the antennas that were installed at the factory's are in my old beat up radio's.I suppose I could tune into KVOO with my computer though.There is a good Country Music radio station   www.us963.com   and a Bluegrass radio station and an oldies station and a lot more AM and FM radio stations here in Jackson but they hardly ever play any Western Ranch music.I like Polka Music too,but around here,it just doesn't exist on radio stations.

Yeah! we can dream Mark. Contrary to popular opinion the possibilities of running out 1000m/3000ft of wire in South Africa are very slim, as most of the country is intensively farmed and there are massive power distribution lines gridlocking the country.
There are a couple of inland DX sites we have used in our dry semi desert area's, but they never yield the results of operating at the coast with much shorter wires.

I have had outstanding results at coastal shacks with my portable and compact Kiwa MW loop. Pity it is off the market now and no other commercially available loop on sale to my knowledge.

Pity about those JRC radio's - they would have done even better with a decent RX..!!!

You don't get it - he uses HIDEEN BIDDER IDs - that means
he can sit and shill bid (using gottahaveit1995) and no one can
turn him in now.  HE'S the one bidding it up and up and up, I'm
sure.  Sometimes he does this a bit too much and wins his own
junk - then relists with 'deadbeat bidder - back on the market'
He's done it over and over again...

OK I didn't restate the obvious, agreed.

The best place to terminate the antenna and mount the Balun is *at* the
ground rod, which means the connection is about 4 inches long. Ty-wrap the
Balun to the protruding ground rod. After applying coax-seal to the
wire-wrapped and then soldered connections, cut the bottom and slit one side
of a plastic beverage bottle to just fit over the Balun and tape the bottle
shut afterwards. Spray paint the bottle with bow-flex cammo and it becomes
part of the background, and weather-proofed for years of service. Some
designs advise terminating the vertical drop of the inverted-L about 6 feet
above ground. That's more important for a center fed or off-center fed
(dipole type) antenna than the end-fed wires. Users should have no problems
terminating the inverted-L at ground level, and sink a good ground rod (with
buried radials if you desire) at that same point.

I have seen instances where he's repainted cabinets, but only if it's real nasty.

If you read his feedback, you'll see people have complained about "original paint" meaning a lousy repaint with the correct color.

On the Kenwood, he says "Cosmetically, it is in exceptional shape for its age as can be seen in the pictures."

"For it's age" probably means he didn't paint this one.  (Otherwise, it would have been "mint".

"Mark S. Holden" <mark@bmas.org> wrote in
news:41F900E5.C51945AB@bmas.org:

I like the Yaesu FRG-100, or at least the possibility of a selection of equipment (Palstar etc.). It seems that in the modern world, people are selecting fewer items, since they read this or that about a specific brand of equipment, and the focusing of sales is going to result in a limited variety of designs available.

By the thread discussing the omission of the RS232 Jack on the FRG-100, without demonstrating that other radios, in similar price categories, designed and marketed in a similar era, were also lacking this Jack, seemed to impugn the Yaesu itself. (As I originally said, Yaesu has dropped the radio from their web page, it has been discontinued, I am sure that the Icom R-75 has taken its place in terms of Table Top Radios).

People have a dwindling interest in SWL. After all you can get anything you want off of the internet and cable (or Satellite). But can you really? The U.S. Government has ordered an Iranian channel to be deleted from a satellite providing coverage to the U.S., citing "Intellectual Terrorism". So much for the convenience of the "digital age", the satellites are beyond our control, someone else controls the switches.

http://www.counterpunch.org/moses12212004.html
http://www.asiamedia.ucla.edu/article.asp?parentid=18855

Shortwave offers the ability to directly glean information from a variety of sources, thereby giving you the possibility of making an "educated decision". I would truly mourn its passing, as I rue the passing of the FRG-100 as a current offering.

It was around $200.00 with the shipping to & from....
Not bad considering the worth of the radio, and a three hour pull down and

repair....alignment, 24 hour smoke test and another realignment.
Getting parts is the problem, he probably buys units that are gone and some
that play but are cosmetically poor and takes off the good mechanical
parts...but the parts supply barrel has to be playing out!!

While browsing on the internet, I found the following site:

http://www.offshore-radio.de/fleet/

Very interesting, photos of many of the ships, history, stories of the
escapades of the U.S. FCC to confiscate ships purportedly in international
waters.

"A survey of all Radio Ships and Artifical Structures"

Soliloquy.

How large is the property in Anguilla? I do remember him having a hard
time trying to get the government there to let him brodcast, dont know
all the details of that, but it did take him awhile.

LF,
.
An "On-the-Roof" Shortwave Antenna may be a good idea;

and an "In-the-Attic" Shortwave Antenna can also work well.
.
But when you have RFI / EMF Man Made Noise Problems
usually one sure way of reducing them is to use a Loop
Antenna to Null-Out the Noise Source or Peak the Signal
of the Radio Station you want to listen to.
.
An In-Door Loop Antenna is about as easy to build and
takes about the same amount of time money and effort
as an Out-Side {External} Shortwave Antenna.
.
READ - Four 'different' "In-Door" Loop Antennas Ideas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1933
.
Specifically take-a-look-at the :  In-Door "On-the-Wall"
Loop Antenna for 'portable' AM/FM Shortwave Radios that
use a 1/8" (3.5mm) Jack for the External Antenna like your
Roberts R861 Radio.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1845
.
This Antenna can be Mounted with Two Cup-Hooks
and a 8oz Fish Weight to position the Bottom-Center.
.
Try it on one wall and then the adjacent side wall (90*)
.
iane ~ RHF

Where do you buy these? I read about it in the PWBR 2005 and would like to purchase one...

Jackie

Thank goodness; I could go the rest of my life
without hearing another loonie Gene Scott freak show.

Anyone besides me notice that whomever does their
sound mixing is a class-A doofuss?
Whoever this guy is, I don't know if I'd trust him
with a light switch, much less a mixer board.

Wonder what the old fart will think in the last flickering seconds,
          as the darkness closes in,
             and Jesus
       just....doesn't................show................up.

A lady whom is fifty years old,she and her dad and her husband are originaly from Ireland.I met them via the internet a little over five years ago,they live in Bognor Regis,West Sussex,England about sixty something miles south of London.About two years ago her dad went to Ireland (Caherconlish,near Limerick) to visit friends.His doctor in Bognor Regis had told him it was ok to make the trip to Ireland,he had been having prostate gland problems.Almost as soon as he got to Ireland,he was in very severe pain.He wound up at Dooradoyle Hospital,Limerick,his prostate gland was just about to burst.If he haden't made that trip to Ireland,chances are he would have died in Bognor Regis.

That's just cute!  I say dump that old kook
GS as he's just a cheap copy of L Ron Hubbard.
Put James Lloyd on instead! Ole James "Cleric-in-a-
chicken-coop" up in Oregorn is FAR more entertaining !

> *One reason for KAIJ Dallas planning to broadcast something besides Dr
> Gene Scott: reportedly has terminal cancer after puffing cigars; but
> if his heirs want to continue the University Network ministry, they
> could run his tapes 24 hours for 7 years without repeating

Good news: Master rip-off artist, circus showman and
commensurate Con-Man Gene Scott dying a very painful
death due to cancer....

Bad News: Some shortwave station owner gettin a hardon

at the thought of running his tapes for even a year...just the
thought of that makes me wanna go take a massive shi+...

Wales have been tootin and pootin in the oceans since time immemorial
too.Every once in a while the oceans give up a great big belch.It could
be (but probally isn't) the Wales head for higher ground (beaches) to
get away from their old toots and poots.Well,it is an idea.

What is the deal with this cheap radio? Is it any good or am I just throwing away $10 on a piece of junk?

I am not looking for anything fancy in shortwave....just something that has decent sound and can pull in shortwave bands for occasional listening and amusement.

I was going to try a variation of that, by putting the matching transformer
at the long wire junction to the coax. We had a few warm days here, though
and the it's a mudhole back there, so I wait..

> I seem to recall some effects of capacitance coming into play when used as

> frequencies.

Possibly. If I ever get energetic I'll connect a signal generator to the far end and see what comes out on the radio side. I have an old scope here that will go to 30Mhz, so it should be fine. Things don't seem too bad now, but I have no way of knowing if they can get better until I try.

> I'll have to look through the literature when I get a chance.
> Depending upon how you have it hooked up you might not have noticed any
> difference with a matching transformer if it was not attached properly.

Very true. I have no way of knowing to what degree the impedance characteristics of the wire have been changed (if at all) by the single point ground cable sheathing. That signal input test is starting to sound better all the time.

mike

I bought a radio described as in very good condition. when I got it, I would rate it fair to good. when I wrote the seller, here was his first response:

> I am sorry to hear that but this item is being sold
> as-is.  This was listed
> very clearly.  There is nothing we can do for you on  this item.
>
> Sorry I couldn't be more helpful.

no where did he address that he was not giving the truth in the auction.

when I told him I would have to leave a negative for  him, here was his response:

>Expect a negative in return for a buyer who doesn't read
>auctions and is quick to leave negative feedback. Hope
>your perfect record is worth it.

now where does "as-is" mean you can LIE about the item you are selling ? How was I quick, I wrote him and he told me tough luck !

this is an area where the eBay system is seriously flawed. How can I give a negative without getting one I don't deserve. maybe a class action alw suit is in order here !

My first question would be whether your idea of very good condition is
the same as the sellers.  Also, were there pictures you were able to
look at?  Believe me, I sympathize with you but if the auction said "as
is", you really have no recourse and I don't think the bad feedback is
worth what you *won't* gain from it.  Sometimes I hate the "system"......

Best,

sadly, 'as-is' pretty much does allow him say anything about it he likes --
```

particularly as there is no official meaning of 'very good condition'.

He was in very good condition -- for a dead guy.... (for example)

I've been noticing that 5975 has been slipping into noise gradually
during the 0300 hour. The World Today starts out audible but by 0315
it's mush.

It's much worse than I had imagined. Is there a clear explanation on how this could have happened yet? I found the "uncharted mountain" story hard to believe.

(chuckling)

I'm somewhat disappointed no-one picked up on my
"Office Space" reference (though I'll admit, it was obscure).

Office Space and "The Office" (BBCTV) are 2 of my
favorite productions, *ever.*

Ahem.  On to spicy things:  Habanero hot wings tonight.
A one course dinner; what could be easier?

73,

Steve

This fellow is local to me. I love this store! I live in the Twin Cities metro area, and Great Northern Antiques is really quite a fun place to visit... Allan fixes and sells all sorts of vintage radios as well as parts and manuals. He's sort of a Zenith repair specialist (which is good for you!). The website doesn't support online ordering, but there is a catalog on it and you can always call them and let them know what you're looking for. They are friendly, helpful and very knowledgeable about old radios.

Great Northern is a fun place to visit if you're ever in the Twin Cities. It's super close to the Twin Cities International Airport and the Mall of America.

Jackie

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

"mike maghakian" <maghakian@comcast.net> wrote in
news:X-mdnYz7cOwiBGTcRVn-sA@comcast.com:

Where's the link to the auction? I'd like to see exactly how it was described, any pictures, how much it cost, etc.

I have purchased various things from E-Bay, all but 1 went well. The 1 that went poorly was a Bearcat Scanner from the bygone days, programmable though. The auction was listed "as is", but went on to state that the picture shown was the radio actually scanning. When I received it, I realized that it didn't work, giving an error message in the display. When I re-examined the auction photo, and looked very closely, it showed the same error on the display that I had. There was no way that it was working when the photo was taken.

Although I may have gotten satisification by negotiating a return of the radio, I paid so little for it that it would have cost me more to return than I paid for it.

I was an E-Bay Sap. Though I paid for the unit in a very timely manner, the auctioner wouldn't post any comments for me until I posted comments for him. I was therefore unable to post the negative comment that I wanted to. Here I was with 20 purchases, and he with 1500 sales. One negative comment for me would have done more damage than one for him.

Regards.

Soliloquy.

tich tich...

I checked the headers and it's from an anonymous remailer. I jumped to the erroneous conclusion that you were being nasty again, so I posted. In my defense, I made a mistake based on pretty convincing circumstantial evidence. It was still a mistake, however and for that I am sorry.

does anyone know of a way to increase sensitivity especially below 5 mhz on
these radios..i notice sensitivity is low at 3 mhz but improves, the higher one
tunes..at 29 mhz it's actually pretty good.

i suspect some type of filtering was added to reduce overload on low freqs???

suggestions r invited.

Yes, I saw that the time and freq listed for Sackville at DRM.org matched.
This is the first time I've looked at the site for several months and found
that there are a lot more transmissions from just a few experimental
broadcasts listed earlier. It will be interesting to see if this becomes
really popular. Unfortunatly, the reception setup is rather involved for
most listeners. I don't think my old laptop is up to snuff for this- also,
the software is not free (yet). I may try it, but I just don't care much for

having to depend on a computer to help me listen to the radio- too much
fuss.
I suppose there are a lot of other SWL's that feel the same way. It would
be nice if I could just make up a little circuit board to hide behind the
radio, and then flip a "DRM" switch when I encounter a transmission. I'm
sure this subject has beat around here plenty anyway!

Thank you Mark.
I know have a better understanding of the situation.
I think I will take your advise and just make a multi turn loop.

I have an outdoor wire antenna, about 75 feet in length, connected to one radio. The other radio is used with a strictly indoor antenna. This consists of an 18 guage insulated wire (the wire is available in white from Radio Shack)that goes once around the room at ceiling height. We live in a wood frame house and the indoor antenna is on the second floor. Surprisingly, the reception is quite good, I am usually able to receive most broadcasts on either radio.

I guess the condo situation modifies your situation somewhat. If the building is substantial (concrete and steel), access to the window/windows is your best bet. Try to avoid running wire antennas close to other metal, such as suspended ceilings or metal frame windows.

I really like the FGR-100B, have fun with it.

Hello,

I am selling an Icom IC-R71A shortwave radio - excellent condition, rarely used, owned by ex-husband. Comes with upgraded Kiwa filters and infrared remote control and also has speech processor mod. I do not know the values or specifics of what has been actually done to the radio but I do know it is a top-notch receiver. Has PSB/notch filter and some kind of audio mod done on it as well to improve sound. All lights on panel are very bright and clear and radio is not scratched or nicked at all and looks new. Have original owner and service manuals (no original box tho). Radio has been very well taken care and is as close to mint condition as there is and needs a good home:) Asking $450 + shipping from Clearwater, FL 33764

Karen

You have to ask questions, I haven't been burned yet. The only thing I have ever bought that didn't work perfectly was the Hammarlund HQ-100 I bought. A wire broke off during shipping, and it did nothing but buzz. The thing was so heavily modded I had no clue where it went, with 3 added tubes and no schematic, I wasn't looking forward to having to screw with it. Luckily, I found the end of the broken wire, and got it going.

I always ask, "Is there anything wrong with it?" So far, the answers have always been "No". ANd they were telling the truth.

The only problems I had selling something was when a buyer tried to claim an expensive receiver I sold him wasn't working right. He wanted to keep it, with a partial refund, of course. I had him send it back and I refunded his money. The radio worked perfectly for nearly a month straight, and then I put it up for auction again, and got a much lower price for it, but the buyer was very happy, and he should have been, as it was in mint condition. He paid about the same as the first guy wanted to pay. That's how it goes..

BDK

Read through the ebay website rules about leaving feedback. Find out the length of time you have to leave feedback; this used to be 90 days 3 years ago, which is why I'm saying you should look it up.

Calculate the date 90 days (or whenever) from the date the auction ended. Circle the date on your calendar. Remember the time the auction ended. Simply leave negative feedback less than an hour before the feedback expiration period.

I know this might sound kinda dumb, but it is the best shot you have at leaving a well-deserved negative feedback without receiving a retaliation feedback in return.

Hope this helps,
tony

It's very mysterious because, I did once get Coast to Coast (with Art)
on shortwave.  This happend a few years ago.  I do not remember the FRQ,
```

date or time.  I did remember that the signal was fading away.

Depending on the details, you may be able to file a complaint of misrepresentation, and a claim for reimbursement through ebay.

I'd do this before filing a neg.

If they agree the listing wasn't honest, they're likely to offer him the chance to make good or get naru'd if they have to pay the claim.  That's likely to mean more to him than a neg.

Of course he may still neg you.

I made a claim a few years ago when a seller took the money and ran. IIRC, they had a $25 deductible, and a $200 limit (really $175 after the deductible.)  You need to follow up on things as they have narrow time windows where you need to take action to pursue the claim.

Dear Ed,

When you spend $10 on a short wave radio you cannot expect anything but a $10 radio. You know what you'll get. It will work. It will receive MW, FM, and SW signals as it's designed to do. I have one and I've even had the All India Radio and a few other more-or-less "difficult" stations on it. I bought it just to see what you get for $10. It's well-worth $10 as long as you don't expect a $50 radio. (I rarely use mine any more. Frankly, it's just a toy.)

If I were to make a recommendation for you, and assuming that $80 is not too much for you, I should recommend the Sony ICF-SW35, a very under-rated and very good dual-conversion receiver which has extremely good quality of construction. This radio might serve you much better (I have two of them), but, if short wave is only worth $10 to you, then go with the B&H.

Best,

Joe

I think the ALA-330S is a wonderful antenna. It didn't work well for me
indoors due to noise, but now that it's mounted outdoors it's doing
extremely well.

If you want to purchase one, you can contact the Shortwave Shop and
order one with a credit card. Visit their website for contact
information: http://www.shortwave.co.uk

Your brain is the decoder.

Dear John,

Compared to what you, your father-in-law, and your family are going through, questions about the Wellbrook antenna seem insignficant. I hope you and yours find the strength to pull through this. (The "dedicated" health-care "professionals" in ALL countries offer poor care nowadays. It seems to me [in the USA] that the only "dedication" many [most?] of these people seem to have is to themselves.)

So I'll just make one quick comment; you will be able to observe this for yourself (and, actually, you already have). Many antennas will cause the S-meter to show a stronger signal than the Wellbrook, yet, especially in the summer, you will be able to hear the signal far better via the Wellbrook than most other antennas. This is because the other antennas boost the noise along with the signal. The Wellbrook attenuates electrical and atmospheric noise. Its gain is not as great as many other antennas, but its signal-to-noise ratio (which is all in which you are interested) is far better than any other antenna I have personally tried or experienced. In short, it just doesn't matter what the S-meter reads. The bottom line is: "can you hear the signal with good intelligibility?"

I (and I know all the rest of the members of this group) sincerely wish your father-in-law a speedy and complete recovery and for you and your family to get through this most terrible time.

Best,

Joe

==============================
WASHINGTON, DC (ENS) - The U.S. Navy and the National Marine Fisheries Service have released a report acknowledging the role that the Navy's experimental sonar played in the deaths of 17 marine mammals in the Bahamas last year. The report is the agency's first official admission that sonar may contribute to whale beachings.

I've been lucky with Ebay so far, but your experience is why I'm still
very cautious about using them. I find that calling the seller and
talking to him is one way to get a pretty good idea about whether he can
be trusted. Most people don't lie well on the phone when they have to
answer questions quickly. Hope you get some satifaction with Ebay.

The Sony An-LP1 is one of the best but I don't know how well it would
work with your FRG-100B. Might be worth a try.

An article in the Cincinnati Enquirer says that the former VOA Voice of America Bethany Relay Station is in urgent need of repair, and to help save the building Ohio lawmakers are considering a $275,000 grant. That money would be combined with locally generated dollars to match a requested $625,000 "Save America's Treasures" federal grant. The total $1.2 million would be spent on electrical, heating and structural work on the building, which houses the Gray History of Wireless Museum, the Media Heritage broadcasting collection and township park offices.

Hopefully this marks the resumption of MediaScan. I had to stop for several reasons. First of all, I was away on vacation for 6 weeks, and it was hard to get going again. Then, I got put in charge of Radio Sweden's transition to a new web content management system, and was told to put MediaScan aside.

Later, when it turned out that I did have some spare time in the new assignment, the English Service expressed interested in continuing MediaScan. But after a computer crash, I couldn't get my Radio Userland blog software to work right. I've now switched to another system, Blogdrive. It lacks many of the features of Radio Userland, but does allow me to post from anywhere. I could only get Userland to work on a computer and home, and not behind the firewall at Sveriges Radio.

I'm note sure how often I will publish, or whether I will publish a lengthy bulletin or blogs. The latter is easier, but others (especially Andy at Radio Netherlands) do that well. I am gratififed that a few people have asked if MediaScan is still alive. That indicates some interest, so I will try to get something here on a regular basis. Besides, it's a great URL and deserves content!

Around 40 frequency managers of 18 shortwave broadcasters have converged in Kuala Lumpur since Monday for an Asia-Pacific Broadcasting Union (ABU) conference on reducing interference to shortwave services. The first two days of the 2005 Coordination Conference of the ABU Shortwave Coordination Group, ABU-HFC, saw significant success achieved towards this end. The conference hopes to address frequency channel requirements for more than 6,700 daily shortwave broadcasts by using coordination methods and complex software tools.

The recent tsunami calamity has underscored the critical importance of shortwave radio in bringing disaster warnings and new of relief efforts to the affected population, and the need to keep it free from interference. The ABU-HFC Steering Committee also met on Monday and made some crucial decisions on the functions of the group.

What kind of antenna are you using?  How long?  Are you using a balun?

You made our point. Manufacturers like to keep the price down by
eliminating certain features like a 232 interface, *perhaps* with the
intention of selling it as an accessory. Drake did the same with the R8
and it's VHF module.

It may be more a matter of the whip sensitivity which is not very good with these two models compared to some other portables. You can find a lot of mod's for them on Yahoo and other sites. I did a whip mod' that was particularly succesful. It involves adding an impedance matching balun transformer between the whip and it's circuit input.

It's a very good idea. You can save yourself a lot of hassle by
'snooping' the area first before erecting an antenna. It's one of the
best ways to find radio interference.

It's considered a good "beach radio" - you can hear strong stations
and have fun. If it gets stolen or if it gets damaged - well, it's
just a $10 radio.

If you're expecting to do serious DX and hear weak domestic stations
from Latin America, Africa or the Pacific whilst you're in North
America, you'll be disappointed.

It's probably also a good radio for people in third world countries
who want to bypass domestic authorized media but who can't afford
anything fancy. I've heard of U.S. embassies giving out these or
similar radios - although if batteries are an issue, the wind ups may
be better in the long run.

BURNIA3,
.
The RadioShack DX-398 (Sangean ATS-909) has both a
Whip Antenna and External Antenna Jack:
.
The RadioShack DX-398 / Sangean ATS-909 is noted for
being some what deaf off of it's built-in Whip Antenna.
.
Generally the RadioShack DX-398 has a reputation for being
better using an External Antenna connected via the 1/8" Jack
on the Side of the Radio. This is a Stereo Jack and you should
use a Stereo 1/8" Plug with the End-Tip connected to the External
Antenna Wire and the Rear-Barrel connected to the Ground Wire.
NOTE: The Center-Middle-Barrel of the 1/8" Stereo Plug is NOT Used.
.

These fine people disagree.

> http://www.mods.dk/mod/radio_shack/dx-398antjack.gif

==================================================

The radio accepts a 1/8" stereo headphone jack for its external antenna. It's wired a little differently than you think.

The tip goes to the antenna terminal and the sleeve goes to ground, just as you would expect in this unbalanced antenna input. Shortwave signals are routed from the external antenna jack when a connector is plugged in.

The ring--the terminal in the middle of the plug--has a special purpose. When you ground it, medium wave signals are also routed from the external jack instead of the radio's internal loopstick. This is why some people have reported poor MW reception when they use regular 1/8" mono patch cables to connect their antennas.

But for medium wave DXers, this is an opportunity to connect their favorite antennas to the radio; the lack of a good MW antenna connection has made some otherwise good radios less than desirable.

If you prefer to use the internal loopstick for MW, simply leave the ring of the plug unconnected.

Ingo Truppel has another approach:

An important note to the MW/LW - external antenna. It is not useful to connect the ring terminal of the antenna plug to ground. Instead of that it should be connected also to the antenna terminal and parallel via a 1 kOhm resistor or an inductance (some mH) to ground - that way you get more sensitivity for MW/LW (look at the scheme for that). I use an self made active antenna (150kHz-30MHz tuned) with an output transformer which grounds the antenna for DC. So I only connect the ring of the antenna plug to the antenna terminal.

[I haven't tried this. The antenna I use is also DC grounded, so Ingo's idea

should work for me...DM]
How do I disable the internal MW antenna?

Using a 1/8" stereo connector, ground the ring terminal to the sleeve. Or else use a 1/8" mono connector. The FAQ author much prefers the former method as this can be controlled by a SPST switch to disable and reenable the internal antenna, thus saving the antenna jack inside the radio from wear.

I read the report, it was excellent and sounds like a marvellous way to
spend a few days, and well worth a second post for anybody who missed it!

Mark.
Auckland
New Zealand.

This is accurate, but they fail to mention that "this quarter or beginning of
next"
refers to "quarter century".

I used to have an outdoor longwire about same length as yours - until an ice storm. Reality is that the Slinky antenna indoors works just as well - and is a Slinky endloading about 22' of wire.

I bid,
I won,
I paid,
I never received product,
Two weeks later,
I sent email, where is my radio?
He email back to me, what radio you never paid,
Days goes by, I sent bank statement showing $$ going to him via PayPal on
day of auction ending?
He says never got it,
I say bullshit?
Week goes by, I see later bank statement where he has sent $$ back to my
account?
I say WTF?
He says never did it?
I say WTF?
I leave - feedback, what a ass!
He leave feedback what a ass!
Both have negative feedback! What a ass!

He sell's same radio for 50 bucks more than I won for? Ok now I get it!

I monitored his auctions for a while and emailed bidders to look a a site
where I had ALL documentation including bank statements and all
messages back and forth and said "Do you want to send $$ to this guy!".

BOTTOM LINE -sorry it took this long
To me wife is better looking that Marilyn Monroe, but my friends think she
looks like porky pig!

I wonder if we will ever find out what really happened! Navy vessels should know what the hell is in front of them! I was quite surprised at this damage! I wonder what cool stuff is covered up by the blue tarp!

We were coming back in San Diego on a warship, I am on deck and can see the California coast ahead and am thinking "In a few hours I will be in that girly bar with a cold beer". I stop by CIC (Combat Information Center) and ask my buddy, how long till be hit port?" He's answer, after looking at a billion $$ worth of navigation equipment was "About (2) hours till be see the coast". I said "Dude you guy's need a friggin window" and left!

Now that it has been established by 2 of the popular posters to this NG that RS232 protocol and ports go back in history to Noah's time, I was wondering if anyone knows what software I can use to control my Icom R-75.

Everywhere I look, there is some Caveat, such as these:

Of the Icom RS-R75 Radio Control Software.
Windows 95/98 (not XP!) PC Software CD and DB-9 Serial Cable. [Requires CT-17].
Apparently it doesn't work with Windows XP, AND it needs the CT-17 level converter (at $129) to connect the Radio to the computer RS232 Port.
http://www.universal-radio.com/catalog/commrxvr/0175.html (Look for the reference to RS-R75)

Another program, called Commander, requires an "interface".
http://www.qsl.net/civ_commander/

http://www.qsl.net/civ_commander/Help/Prerequisites.htm
"A serial port connected to your radio via an appropriate radio interface
"

Icom RS-232 Interface.
http://www.qsl.net/civ_commander/interface.jpg

I thought that all I had to do was to connect my computer serial port to the radio's serial port. Why all the "interfaces" needed? Why is Windows XP excluded?

I notice that the Commander's web address is CIV commander, and understandably the need for the interface, but I am surprised over the dearth of software for the Icom R75

Anyway, anybody have a link for software available for computer control of the R-75 as a direct connection of the RS232 computer serial port to the radio's RS232 port?

Thanks.

Soliloquy

ZCZC AP04
QST de W1AW
Propagation Forecast Bulletin 4  ARLP004
>From Tad Cook, K7RA
Seattle, WA  January 28, 2005
To all radio amateurs

SB PROP ARL ARLP004
ARLP004 Propagation de K7RA

Solar activity was down this week. Average daily sunspot numbers were off by nearly 36 points to 53.4, and average daily solar flux dropped 31 points to 101.7. Last Friday, January 21, we were hit by a big blast of energy from an X7 class solar flare on the previous day. Just one point below two days earlier, the planetary A index went to 61 and the mid-latitude A index was 30, also one point lower.

A severe geomagnetic storm lasted the next couple of days, but conditions really calmed down on Monday through Thursday (January 24-27) of this week. On Wednesday, January 26, the mid-latitude A index went clear down to 0, because the K index upon which it is based was 0 during all eight reporting periods. This is incredibly quiet, and good for HF propagation, at least if the sunspots are around to support it.

We could hope for similar quiet conditions for this weekend's CQ World Wide 160-Meter CW Contest, but the forecast doesn't look that great. The predicted planetary A index for Friday through Monday, January 28-31 is 15, 30, 20 and 20. This isn't due to any flare, but earth is about to move into a solar wind stream, and the most active conditions are expected on Saturday. Conditions should be back to quiet by February 3.

Ken Kopp, KK0HF of Topeka, Kansas sent in a great article that appeared in the Baltimore Sun on recent solar activity. It is full of dramatic descriptions of solar flares, the recent giant sunspot, and the evacuation of astronauts on the International Space Station to the better-shielded Russian Zvezda service module. For a while at least, you may be able to read it (without having to register) by clicking on the following link on,
http://www.baltimoresun.com/news/health/bal-hs.solar21jan21,1,7436903,print.story?coll=bal-health-headlines

Also be sure to check out a constantly updated collection of links to press clippings relating to amateur radio on Ken's web site at http://members.cox.net/kk0hf/.

Flares, solar wind and geomagnetic storms aren't bad for all radio propagation. 6-meters often gets interesting during active conditions, and a number of reports arrived this week concerning VHF.

When HF operators thought their radios were dead on January 21, OZ1DJJ in Denmark worked K1TOL on 6-meter CW during Aurora in the Scandinavian Activity Contest. You can hear the QSO at http://www.oz1djj.geronne.dk/6m.htm. Click to the left of the phrase, "I am so lucky!!" Thanks to Arne, SM7AED for passing that along.

Jon Jones, N0JK reported a nice 6-meter opening between Arizona and the Midwest on January 21 beginning at 0015z and lasting nearly four hours. Jon was mobile in Wichita, Kansas and talked to K7TOP on 6-meters. K7NN in Tucson and AC7XP and K7TOP in Phoenix worked stations in Kansas, Missouri, Oklahoma, Texas and Tennessee with strong signals.

And finally, ever thought of building your own magnetometer? I've thought for a long time that in addition to noting the College K index, Boulder K index or planetary K index, it would be neat to have one that is strictly local. Where I live in Seattle, I could have a University District K index, although in the city it might be affected by passing trucks. Check a web page devoted to just such an instrument at http://www.da4e.nl/magno.html. You can see current real time results from a homebrew magnetometer in the Netherlands at http://www.da4e.nl/magnetogram.htm.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for January 20 through 26 were 61, 69, 60, 40, 42, 56 and 46 with a mean of 53.4. 10.7 cm flux was 122.7, 113.5, 102.2, 95.8, 94.6, 94.1 and 89.3, with a mean of 101.7. Estimated planetary A indices were 12, 61, 28, 17, 6, 4 and 4 with a mean of 18.9. Estimated mid-latitude A indices were 10, 30, 23, 12, 5, 2 and 0, with a mean of 11.7.

Lloydooo,
   You need to increase the layers of aluminum foil that surround your
head, then after that you need to get a refund on all those college level
Physic's Courses, mommy and daddy paid for, cause you shure don't
understand the Physics and Math involved here.  As it is obvious, that
you don't comprehend the science, it would be useless for any of us who
do, to try and explain it to you, as you don't have the basic vocabulary
down.  Now be a good boy and GO AWAY........

Me

Atomic,

You seem to have newsgroups service (since you're posting here).  If your
news server allows binary files, go to"alt.binaries.sounds.radio.misc."

You'll find that Coast to Coast AM is posted there almost every day as a
RealAudio file (along with many other syndicated radio shows -- Rush,
Hannity, Franken, Alex Jones, etc).

I like using paypal too, but here are reasons some folks won't accept it.

You need to have the commercial account that charges fees if you want to receive more than $1000 per month, or to accept any payments funded by credit cards.

They've been accused of freezing people's accounts without a valid reason.

A few months back they had a system crash that lasted about a week.  Nothing worked - you couldn't send or get money, or check your balance.  Folks who were foolish enough to rely on paypal credit/debit cards without  backup options ended up in embarrassing situations.  One guy claimed he was arrested at a restaurant because his card was declined.

Where is the greatest portion of the audience for the Kol Yisrael
Ladino (Judaeoespa�ol) broadcast at 1645 GMT Winter/1545 Summer?

I notice they say "Buenos tardes" so I should guess eastern South
America. (although it was probably not a good idea to be a Ladino
speaker in a Spanish or Portuguese colony during the Inquisition)

I believe the Degen 1103 has 450 kHz IF frequency, not 455 (images can appear 900 kHz below a fundamental, which implies a 450 kHz IF).

You'll also need to convert the 450 kHz to ~12 kHz if you plan to send the signal to a PC's sound card for DRM conversion within software. The SatSchneider folks in Germany have suitable converter boards, but I'm not sure the Degen portable would be up to the task in other key parameters.

I would like to set up an attenuator like this one for my portable
shortwave using a random wire antenna:
http://www.kc7nod.20m.com/atten_.htm

But I also need static discharge capability to protect my receiver.
Here is one from the same site:
http://www.kc7nod.20m.com/static_dis.htm

These both seem like straightforward, solid circuits.  However, if
they're used together, wouldn't a static charge take the path of least
resistance which would be the attenuator out the center tap and
straight to the radio?

If I'm correct, is there an attenuator/static discharge circuit that
will work together?

Thanks!

Radio-mart will put it up as "mint, never used or only used once." You can bet there will be something in his description to puff it up that isn't true.

You could hook the potentiometer to the output of the static discharge circuit, so the signal goes through it before it gets to your attenuator circuit.

If it is anything like IBOC, they can keep it. While IBOC touts the benefits of their modulation scheme, they don't bother to tell anybody that their hybrid transmissions consume (yes consume) three channels of broadcasting space on the medium wave band. (I know I've said this before). All of this, and you get to pay a licensing fee!

Pete

Have you heard about this new hunting reality TV show that's seeking
participants? It's called "Hunting for Bambi" and it's like
Fear Factor meets Girls Gone Wild. 6 guys get to hunt 12 naked women in
the woods with paintball guns. Sounds like it should be a new Olympic
sport if you ask me! Definitely better than hunting deer. lol! Go to
www.huntingforbambi.com if you're interested in signing up.

Shit mon, I never thought of that one!
Wonder how many of his followers will
"Drink the Kool-Aid" or "Shed Their Containers"
when the old money huckster himself finally does
drop like a fly in the rear window deck of
the car on a 90� day in the sun in the parking lot..?

Pay close attention to who gets all the money left to them
and if 2 or 3 other Last Will and Testaments turn up
in Probate court.  (this should be VERY amusing!)

My guess is his whole churchy thing will turn out to
be a cheap carbon copy of $cientology by
2006 with the closest associates in the boardrooms
and full access to the bank accounts.....get on the telephone.... : )

Such fools! Such utterly brainwashed morons......!

And therefore quite rightly he should wear clothing that keeps him warm.
There are literally hundred of possibilities including nice dark suits
and coats. A white fur collar, a rapper's cap and a jacket emblazoned
with his name are not included in the collection of suitable wear for
such an occasion. He has no excuse sorry.

I can't seem to get a good answer from Radio Shack on this question, so I figured someone on here someone would know it. This is not a shortwave question, but I figured there is a higher level of tech knowledge on here than Radio Shack workers. Verizon just sent me an upgraded wireless router for my DSL. I also have a second computer than communicates with the router via a USB adapter. Anyways, I had a Netgear wireless router that I was using but no longer need since Verizon sent their new and improved one. Can this Netgear router be used on a third computer to receive the DSL signal from the Verizon router OR will I need to pick up another USB adapter to receive a signal. I am not sure a router just transmits signals and maybe doesn't act as a receiver of signals, thus the need for the USB adapter. Any information appreciated.
David

I agree with the other responses. It is ok for the beach and camping. I brought mine out west when camping last summer for over a month. The band selector fell off halfway through the trip and I had to use a paper clip to switch bands. It did fine picking up many FM, AM and SW signals, but no DX machine. Also, it is analog, so
frequencies are difficult to estimate exactly. But, in a way I was less worried over the radio as it cost just $10, not $350....so I didn't worry much about losing or dropping it during the trip.

I don't know... maybe if you add one of those "internal cellular telephone
booster antennas" that they were advertising years ago to your radio, it
might work better!

Speaking of HF-150s, there's one on Ebay right now:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&category=15051&item=5746183538&rd=1&ssPageName=WDVW

Could be an interesting auction.

Funny thing is, I noticed a Satellit 700 up for auction as well:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=15051&item=5746243261&rd=1

The bidding on the 700 is already up to a whopping (and mind boggling) $565.00. I'll bet the Lowe goes for significantly less than this. I really do believe that Ebay is a great marketplace for tabletop receivers and some 'portatops', but not so good (and occasionally terrible) for portables.

Steve

Thanks, I have downloaded it, installed, it, and it is running fine. Some of the database functions of the program seem interesting as well.

I use a laptop with USB ports only, so I have a USB to serial port adapter, and it seems to work flawlessly with this program.

I know that some other software manufacturers for radio control programs steadfastly warn against using the USB to Serial port adapters. Why, I don't know?

I have used it successfully with several programs from RT Systems Inc.

for my Yaesu handhelds and mobile.

Thanks again. At least I can tinker with Computer control without
building the interface.

Soliloquy.

Bob Parnass wrote a program called TK-75.  It can be downloaded from
http://parnass.com/tk75/ .

If you are using it with Windows, it requires the free tcl/tk program to
work which can be downloaded at
http://prdownloads.sourceforge.net/tcl/tcl832.exe .

I've used it and it's a decent program.

I apologize for this being a little off topic.  I've recently installed
a cb radio and am picking up lots of alternator whine that is coming in
from the antenna.  I've ordered an alternator noise suppressor
(http://www.crutchfield.com/S-VqGuUiolKOG/cgi-bin/ProdView.asp?
g=181150&id=detailed_info&i=127ANS80)
which arrives next week.

Looking at the online installation instructions
(http://akamaipix.crutchfield.com/Manuals/127/127ANS80.PDF), it
indicates that I may have to add a "10000 or 50000 mfd capacitor" to
completely block the noise.  The installation looks simple enough, but
where do I buy one?  I've searched the web but can't find it.  Does
"mfd" translate to another measurement?  Can anyone point me in the
right direction?

Thanks in advance.

I am not sure if I understand your question.
A router is like a telpehone central
office exchange. Each PC (on a net)
has to have a NIC (network interface card)
These can be ISA, PCI, integrateed, PCMIA
(or whatever you call the little plug in cards
that laptops use), or USB.
Each PC has a ethernet cable, today most
look like a telephone jack on steroids, but,
in the "good old days" we used 50 thinnet
with BNCs and I have even seen some odd IBM 2
pin coax. But almost everything today is either CAT5
or fibre optics.
You hub has one port called "uplink", (different terms
are used) that connects to your Cable/DSL or real world
ethernet port. My Ntegear T10 has 8 femal connectors.
One has a switch to allow it to function as a normal
prot, or an uplink port.
Say I have four PCs and a cable box, I don't we only have
2 and a use56K dialup, you will run one cable to each
PCs NIC device, in this case your USB adaptor. Then the
uplink port will go to the cable modem.
But each PC has to have it's own NIC.
An each will have to have a unique TCP/IP assigned.
Some hubs, modems are smart and use DHCP.
Others you will have to assign "static" numbers.
This will at least get you pointed in the right direction.
In a realy bad evil situation, you mihgt have to have
1 PCwith 2 NICs to act as a bridge. I don't know how far
hubs and cable modems have come in the last few years,
but when I helped a friend set his up 3 years ago, he had to
go the ugly route.
Wireless systems face similar issues. All PCs must have
a unique TCP/IP address. This is perhaps the single most
important thing to learn. I learned the hard way at 3:00Am the
hard way. We have one modem and use "network connecton
sharing" to allow that. It was a major PITA to set up.
I am assuming that you are using TCP/IP and not "netbui" or
Novel.
Terry

www.signalhilltrading.com   sells the exact same radio.I know a guy who owns one.The two little slide knobs on the front are oval shaped and on his radio,the little dial indicator bar that moves up and down when tuning a station is way out of alignment instead of being straight across like it is suppose to be.I think the same company that makes the Signal Hill radio's also makes the Bell and Howell radio's too.Bell and Howell used to make some fine cameras and movie projectors many years ago but their name on those cheap two bit junk radio's sure doesn't say much for Bell and Howell nowdays.

```

The 10K resistor will bleed all but a nearby
lighting strike(or EMP event) safely to ground.
If you are worried, use the 0.01uF 500WV cap
in series with the CENTER/WIPER output.

In the "static" discharger I doubt if the NE2 will
ever flash, the 10K will effectivly bleed most static
to ground.
I wish there was an easy way to post drawing in a NG.
Print both diagrams, and wire the pot in the place of the
10K fixed resistor., place the capacitor between the wiper
and the output jack.
There one box that serves both functions.
Terry

MSOV,
.
The ones that make me say !WHAT! are the C. Crane Co.
AM Twin Coil Ferrite Antennas that are sold as
'returns' by Crane on eBay.
eBay Seller = c.cranecompanyinc.
http://search.ebay.com/_W0QQsassZc.cranecompanyinc.
<http://cgi3.ebay.com/ws/eBayISAPI.dll?ViewUserPage&userid=c.cranecompanyinc.>

.
The new AM Twin Coil Ferrite Antennas direct from
C. Crane Co. sell new with the Full Manufactures
Warranty for $99.95 plus Free Shipping.
TCAMA => http://www.ccrane.com/am-antenna.aspx
.
Often the 'returns' are Bid-Up on eBay to $85
or more and sometimes $90 plus dollars.
This is with only a 90 Day limited warranty;
and the buyer has to pay an Extra $9.95 for
Shipping.   EXAMPLE :
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5744441445
.
Later the Buyer must Say : Oh No ! I Paid Too Much !!!
.

I know, I have one of the first Diamond Rio MP3
players (PMP300?) and it did well to run for 4 or

5 hours on a "AA" cell.
I treated myeself to a Rio Chiba, that has 8 times
the built in memory, and will run on a "AAA" for at
at least 20 hours. (I couldn't stand NPR or commercial
AM/FM radio any more and I can't see trying to put a
SW in a modern auto BTDT and still have the scrs!)
But having said that, I just don''t see a market big
enough to get the economies of scale to make it
practical. By the time that happens, the "third" world
will all have telephone and modest internet access.
A lot of 3rd wrold places already have very deep
cell phone penetration (I ownder why the market
guys came up with that word?)
Look at how many MP3 players have been sold.
Then look at how many SW radio have been sold
since radio began. I am willing to be a nice steak
dinner that  MP3 players have the lead, or will very
soon. I know 30+ people who have MP3 players.
Now some like my sister have a PDA that also
is a MP3 player. I know, not counting the hams,
maybe 4 poeple who have SWs. And one is my wife.
The other 2 are people Ihave given my oldr rigs
(RF2000) and Sony ICF?-7600 to.
Everyone wnat a MP3 player.
Only us nuts want a radio that requires a "long antenna
wire".
I still think it is a whizbang technical solution looking for a
problem.

Terry

I've been posting here for several years and have never posted an OT subject or link. I came across the story that I have linked to below and decided I just had to go and do it this time...

I'm exploring 41 meters tonight because it is clear here tonight for the first time in a while... I'm also having a beer...

Which leads me to this....

http://www.ananova.com/news/story/sm_1261997.html?menu

LOL !!!

That is priceless.... CHEERS !!!!!

"... now my kidneys and liver hurt."

Hee hee! Kind of reminds me of one of my all-time favorite websites, "The Onion". There are few websites that've made me laugh as much in the years I've been reading it.

This week's top story (http://www.theonion.com/news/index.php?issue=4104):

"U.S. Children Still Traumatized One Year After Seeing Partially Exposed Breast on TV"

LOL!

Back on topic: so 41 meters is clear tonight, huh? I believe I'll turn on one of my radios tonight... since last week's solar tantrums, SW reception has been bad in my area...

Jackie

As a rule, I hate the OT threads in the NG and I never acknowledge their existence lest I encourage the idiots that post them, but this one made my day.  Thanks!

Third Columnist Implicated with Payola Charges

By E&P Staff

Published: January 27, 2005 11:00 PM ET

NEW YORK Michael McManus, whose syndicated column, "Ethics & Religion," appears in 50 newspapers, was hired as a subcontractor by the Department of Health and Human Services to promote an administration marriage initiative, according to an article posted yesterday by Salon.com, the online magazine.

Senior writer Eric Boehlert wrote that Salon had confirmed that McManus �championed the plan in his columns without disclosing to readers he was being paid to help it succeed.�

This report emerged one day after President Bush ordered his Cabinet secretaries to stop hiring commentators to help promote administration initiatives, after revelations surrounding commentators Armstrong Williams and Maggie Gallagher.

According to Salon, Dr. Wade Horn, assistant secretary for children and families at HHS, had responded to the latest report by announcing that HHS would institute a new policy that forbids the agency from hiring any outside expert or consultant who has any working affiliation with the media. "I needed to draw this bright line," Horn told Salon. "The policy is being implemented and we're moving forward."

McManus could not be reached for comment.

Horn told Salon that McManus was paid approximately $10,000 for his work as a subcontractor to the Lewin Group, which was hired by HHS to implement the Community Healthy Marriage Initiative. McManus provided training during two-day conferences in Chattanooga, Tenn., and also made presentations at HHS-sponsored conferences.

Horn said he first learned about the payment on Thursday.

�In the wake of the Gallagher story,� Boehlert wrote, �he asked his staff to review all outside contracts and determine if there were any other columnists being paid by HHS. They informed him about McManus. Horn says the review for similar contracts continues.�

Horn said HHS was not paying Gallagher and McManus to write about Bush administration initiatives but for their expertise as marriage advocates. "We live in a complicated world and people wear many different hats," he told Salon. "People who have expertise might also be writing columns. The line has become increasingly blurred between who's a member of the media and who is not. Thirty years ago if you were a columnist, then you were a full-time employee of a newspaper. Columnists today are different."

In 1996, McManus co-founded Marriage Savers, which, among other things, asks clergy not to conduct marriage ceremonies unless the couple has had lengthy counseling first.

There is no set date.

Feedback can be left after the 90 day mark - just through a backdoor.
If someone is smart enough, they know how.

(01-28) 06:18 PST OSWIECIM, Poland (AP) --

Vice President Dick Cheney's utilitarian hooded parka and boots stood out amid the solemn formality of a ceremony commemorating the liberation of Nazi death camps, raising eyebrows among the fashion-conscious.

Cheney replaced the zipped-to-the-neck green parka he sported in Thursday's blowing snow and freezing wind with a more traditional black coat -- red tie and gray scarf showing underneath -- for his tour of Auschwitz on Friday.

Washington Post fashion writer Robin Givhan described Cheney's look at the sober and dignified 60th anniversary service as "the kind of attire one typically wears to operate a snow blower."

"Cheney stood out in a sea of black-coated world leaders because he was wearing an olive drab parka with a fur-trimmed hood," Givhan wrote in Friday's Post, also mocking Cheney's knit ski cap embroidered with the words "Staff 2001" and his brown, lace-up hiking boots. "The vice president looked like an awkward child amid the well-dressed adults," she said.

Digitalisation will initiate a world-wide renaissance of radio

By Erik Bettermann (specialist panel with the Director General of Deutsche Welle in the context of Medientage M�nchen)

"Digital short-wave will revolutionise cross-border broadcasts and will initiate a world-wide renaissance of radio". This was the opinion of the Director General of Deutsche Welle, Mr Erik Bettermann, during a panel discussion at M�nchner Medientage. Mr Bettermann, the head of the German international broadcaster and instigator of the event was not the only one to present an optimistic prediction of a "Digital Global Radio" development: The other panel specialists also emphasised the advantages of digitalisation in the so-called AM range, i.e. short-, medium- and longwave.

The discussion was chaired by Peter Senger, Director of Distribution at Deutsche Welle and Chairman of the Digital Radio Mondiale (DRM) Consortium; and next to Erik Bettermann, BBC representative Mike Cronk, Dan D'Aversa of RTL Group and Phil Laven of the European Broadcasting Union (EBU) were also participating in the debate.

Senger outlined the advantages of digital short-wave as follows: The world-wide accepted DRM standard provided an excellent audio-quality comparable to FM. In addition, the search for frequencies was obsolete, as the station identification tuned in to the designated frequency and automatically switched to the best one. In parallel, it allows for the sending of accompanying programme information such as text messages.

"On top of everything, digital transmission technology saves a lot of energy and costs compared to the analogue one", Senger said. This would open up enormous opportunities, especially for international broadcasters.

For several years, DW like many other broadcasters has noted that listeners migrated from short-wave to FM or other new distribution channels in digital quality, said Bettermann. Deutsche Welle had to stay abreast of these changes. "According to test transmissions being operated by Deutsche Welle, we anticipate large area coverage in almost FM quality without interference such as jitters, induced power-noise or fading", the General Director stated. At the same time, not only stationery indoor reception, but also mobile reception in cars and with small portable devices is possible.

Admittedly listeners would need new receivers. As a consequence, the real challenge for the DRM consortium would be to achieve successful implementation, said Technical Director of the EBU, Mr. Philip Laven. The timetable for the introduction of digital services in the AM bands would in fact be set by broadcasters, "but the speed of the transition to digital will be set by consumers", stressed Laven.

Dan D�Aversa of RTL Group sees the chance to develop pan-European coverage and that RTL Group would try to ensure "that low-cost DRM receivers will be on sale in time for Christmas 2005".

Mike Cronk stated that the BBC had invested heavily in DRM and that
they were now developing "a detailed strategy
for its initial deployment, probably into Europe, in 2005". According
to Cronk, DRM offered the unique combination of
wide area short-wave coverage and FM usability and quality.
As a consequence of using this digital medium, continuous direct
delivery to the audience avoiding "political or other
regulatory obstacles" will be possible.
Bettermann, having also stressed the aspect of the impossibility to
censor short-wave and, focussing on European
implementation, announced that Deutsche Welle would gradually switch
off its analogue short-wave transmissions. A
pre-condition would be the world-wide availability of DRM receivers.

He hasn't won it yet.

If he wins, he'll need to get creative to puff up the description - it's already "mint".

Perhaps he'll go for the wonder/intrigue angle and tell us how he used this very radio to listen to live coverage of Apollo 11, or the assassination attempt on President Reagan.  (a major accomplishment when you consider the radio was introduced in 1985)

Hello friends
I appreciate the indoor antenna ideas that were sent in.  One of them
gave me an idea.  I think I can take some suction cups..a piece of
heavy cardboard or very light plywood..some wire..and homebrew me up a
version of the old "wave magnet" antenna that came with the now vintage
Zenith Trans-Oceanic receiver.  Will pass on how it works (or if it
doesn't).  TKS 73 Greg

While most people on Ebay are in my experience fundamentally honest, they all have different ways of describing the same thing. If I say something is in "good" condition my standards may not be the same as yours. That's why it is so important to ask the seller specific questions before bidding...on anything. Did you ask him any questions about the condition of the radio before bidding?

Unless a seller describes something as new with no wear and operating perfectly you have to assume that it is used. While some sellers provide exhaustive descriptions many don't. For your self protection you have to determine that the radio is really in the condition you hope it is.

It isn't so much a horror story as it is a story of 2 people not communicating.

DaviD,
.
This is one of those "You Got It Wrong" Stories.
.
Both Gallagher and McManus are Experts in their Field
and were paid for providing Technical Support Services
for the training of government employees.
.
They were NOT paid to report favorably on government
policies.  They are both classified as Opinion Writters.
They are NOT so called 'objective reporters' and go
around saying that they are "Journalist".
.
Butt - This is again one of those made-up Anti-Bush
Stories by the Left-Wing that is being 'pomoted' by
the LIBERAL MEDIA who are Card Carrying Members
of the Democrat party of the USA.  The Liberal Media
ELITE - AKA - The Propaganda Ministry of the Democrat
Party of the USA.
 .
the truth shall set you free ~ RHF
 .
 .

> Vice President Dick Cheney's utilitarian hooded parka and boots stood out amid the solemn formality of a ceremony commemorating the liberation of Nazi death camps, raising eyebrows among the fashion-conscious.

Tell all of those "fashion conscious" gay ass-plonking

rug-munching motherfuckas to go and shit themselves
in THEIR wardrobes.

In case any of you stupid liberal pricks ain't aware of it, VP Dick Cheney
has a HEART CONDITION. Exposure to very cold
air (It was 11� F at yesterday's ceremonies with a
15 MPH wind blowing...) can trigger dangerous
heart palpatations in people with a history of acute CVA's.

This is just another example of the liberal controlled crap
media taking a swype at the USA and it's VP, plain
and simple!! They should all shut the phuck up.

> Cheney replaced the zipped-to-the-neck green parka he sported in

Robin Givhan is an ignorant shi+stain.
Take a 40 pound dead mackrel fish
from the local market...and they can
wrap a copy of the Washington Post
in the same and deliver it to her freakin office
with love from the Bush Administration...

> "Cheney stood out in a sea of black-coated world leaders because he
> was wearing an olive drab parka with a fur-trimmed hood," Givhan wrote

> the words "Staff 2001" and his brown, lace-up hiking boots. "The vice
> president looked like an awkward child amid the well-dressed adults,"
> she said.

If anyone is "awkward", it's that lesbo bull-dyke who
made that comment in that shitrag of a newspaper.

Take her column and use it in Polly parrot's  birdcage pan....

Just to clarify, they're talking about the building itself.
Most of the rest of the site has been turned into a
park.

Here's some lines from the VT-Merlin schedule that Mike Terry posted
back as the start of the B04 schedule.  These, at least the 6010, are
DRM.  Or is could be jamming from South Florida.

6005 0300 0330 ......s MNO Rampisham 500 300 English N AM
6010 0000 0100 smtwtfs BBC Sackville 250 268 English N AM
6010 0400 0500 smtwtfs BBC Sackville 250 268 English N AM

>> This morning (1/24 at 15:00+) was interesting.  Radio Australia

>> on 7160, 6195, and 9740  wasn't there.  But was on 12095 from who
>> knows where.
>
>Now that is weird. I've also noticed that the 9525 frequency usually

>used from 0200-0400 is going off at 0300. Apparently they've shifted its
>schedule up one hour.

No, I daily check these.  9525 is from 01:00 until 04:00 but fades out
here about 02:15.  6135 starts at 04:00 to 06:00 but is fading out about
05:30.

>I haven't checked to see if 6135 is now signing on
>at 0300. Passport says that 12095 at 1500 is to Europe from "various
>locations", probably Rampisham at this hour.

Lets grep that file (that I'd forgotten about) again.

```
12095 0700 1700 smtwtfs BBC Woofferton 250 140 English EUR
12095 1500 1600 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1600 1700 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1700 1800 smtwtfs BBC Woofferton 250 140 English EUR
12095 1700 1900 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1900 2100 smtwtfs BBC Ascension 250 114 English S AF
12095 2100 2400 smtwtfs BBC Ascension 250 245 English S AM
```

I used my "world clock" program to get a greyline map and found that
it's probably East Africa for the non-English stations, at sunrise.
That and West Central Europe are the only populated areas.  The sunset
greyline is really grim for Western North America.  India, Easter Island
and Tierra Del Fuego.

GREG,
.
Build you own Super Size "Wave Magnet" Loop Antenna.
.
One of the simplist construction materials for Wave Magnet
type Basket Weave Coil Forms (Frame) is Foam Core Project
Board that is available at Office Depot/Max Stapples etc.
```

.
A 30" x 40" sheet can be be made into a 30" Circle
with 15 (Odd Number) One Inch Long and 1/4 Inch Wide
Slots set at 24* every 6.25" around the Circumference
of the Circle.
.
Fourteen Turns of Wire (115 Ft) on this Frame will
provide full coverage of the AM/MW Broadcast Band.
.
Two Turns of Wire (16 Ft) on this Frame will provide
Shortwave Band coverage from 3 MHz to 16 MHz.
.
Three Turns of Wire (24 Ft) on this Frame will provide
Shortwave Band coverage from 2 MHz to 11 MHz.
.
Loop Antenna Calculators :
http://www.ourhousenews.com/loopAnt.php4
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm
.
NOTE - The full 30" x 40" Sheet can be used if you want
to have a Rectangle Shaped Loop Antenna.  The Top and
Left-and-Right Sides would have Five Evenly Spaced Slots
with the Bottom having only Four Evenly Spaced Slots.
(5+5+5+4=19)
.
Ten Turns of Wire (116 Ft) on this full Frame will
provide full coverage of the AM/MW Broadcast Band.
.
.
HERE ARE TWO "LOOP ANTENNA" eGROUPS :
.
"Loop Antenna" Forum {eGroup} on YAHOO !
LOOP => http://groups.yahoo.com/group/loopantennas/
- Discussion of loop antennas on all bands including ferrite loops,
air core, all types. All bands SHF, VLF, LF, MF, HF, VHF, UHF, etc.
Shortwave, longwave, receivers, transmitters, all fair game here.
.
"Loop Antenna Information and Design" Forum {eGroup} on YAHOO !
LOOPS => http://groups.yahoo.com/group/gccloopantennadesign/
- Welcome the GCC Loop Antenna Designers and Builders group, this
list is everyone who likes to learn about all bands ELF, VLF, LF,
MF, HF, VHF, and FM broadcast and UHF Loop antennas. Contruction,
tips, help, questions, and websites are welcome to the group.
.
.
iane ~ RHF
.
All are WELCOME and "Invited to Join" the
Shortwave Listener (SWL) Antenna eGroup on YAHOO !
<http://groups.yahoo.com/group/Shortwave-SWL-Antenna/>
.
Some Say: On A Clear Day You Can See Forever.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/502

.
I BELIEVE: On A Clear Night . . .
You Can Hear Forever and Beyond, The BEYOND !
With a Shortwave Listener SWL Antenna of your own making.
"If You Build It {SWL Antenna} You Will Hear Them !"
 .
 .

Received my 2nd and 3rd SWL QSL cards yesterday.
They where E-QSLs (to coin a word).
Nice ones from Grasscutter and Sunshine radio.
I've been listening for 40 years, but haven't
persued QSL card very actively.

Terry

I received a very nice paper/real QSL card and CD
from "Undercover Radio" in the mail today.
Confrmed recption on "6925 USB", "1/22/05",
at "2300T". He is running a Homebrew TX with a
dipole antenna and pushing 500Watts.
The CD has a note:
"Rebroadcasts Greatly Appreciated"
This is my 4rth WSL card in 40 years.
My first was in 1970 or 71 from
"Radio National De'Brazilia". I hope I haven't
lost it. I am going to have to start displaying my catches>

I really have my doubts about this "world-wide renaissance of radio".
The average user of radio and especially SW isn't likely to go
to the added hassle of DRM. I have played with DRM and
I am very underwealmed. DRM radios consume much more
energy, IE much shorter battery life, then analog. A lot of
users have no access to "made" electricity and have to
rely on batteries. The greater radio complexity also promises
greater user headaches.
Just my thoughts.

I've read that speech a couple of different times in the past month, and I think I finally know why I am bothered by it. The speaker focuses on the benefits of digitalized broadcasts to the broadcaster and largely (but not completely)ignores whether all of this will be of any interest to the listener. It reads as though they don't really understand who their listening audience is. A listner of limited means in a poor country will hardly be in the position to buy a potentially very expensive digital receiver. A listener who is more well of financially will have access to information and music through an increasing number of sources right now. How would a digital shortwave and mw receiver improve either the quality of selection available right now.

You are talking about the first generation of a technology. You could
also say the same thing about digital displays on portable SW radios
when they were first available.

A portable CD player can run 50-80 hours on two AA batteries. Would you
have expected that when CDs were first introduced?

Think about where the technology could go.

I can dress very warmly in an overcoat with a nice hat and
formal looking boots.  Cheney could have done the same.

I suspect this was the Bush administration's not so subtle
rebuke to the Germans for not quashing the charges against
Rumsfeld.

I've started emailing sellers he has bid on to give them a heads up.
It's their choice if they still sell to him.

What the heck, let's get a whole party going. If we can assemble 20-30 of us, we can go with torches burning in the night.

Picnic later.

GLC1173,
.
FWIW - A Standard Size Slinky is 66 Feet Long.

.

ABOUT - Using a Slinky as an "In-the-Room" Shortwave Antenna.

.

Since the Slinky is Helically Wound that when used inside a room; it is both a horizontal and vertical Antenna. (This is provided the Slinky is not stretched out to long.)
NOTE - The Regular Size Slinky measures about 66 Feet long.

.

A Slinky that is stretched out about 8 feet from Ceiling to Floor has an aspect radio of Vertical One to Horizontal Eight Plus.

.

Here are two ways to mount and position the Slinky.

.

1. As a Vertical Antenna: the Slinky can be stretched out vertically from ceiling to floor; using a cup hook and a half pound fish weight; connecting a Feed-in-Line Wire at the bottom. A Slinky that is stretched out about 8 feet from ceiling to floor has an aspect radio of Vertical One to Horizontal Eight Plus.

.

2. As a Horizontal Antenna: The Slinky can be stretched out horizontally along the ceiling; against the wall; using cup hooks; connect a Feed-in-Line Wire at one end or in the middle. A Slinky that is stretched out about 12 feet on the ceiling at the wall has an aspect radio of Horizontal One to Vertical Five Plus.

.

The Feed-in-Line to Slinky Connection:

.

1. Most people simply use an Alligator clip for simplicity and portability.

.

2. If you can Braze the Feed-in-Line Wire to Slinky connection that is good.

.

3. A Better method for a permanent connection is to:

* Strip off two feet of the Feed-in-Line Wire.
* Start tightly wrapping it around two loops of the Slinky and complete one circumference of the loops.
* Then adding another loop and tightly wrap the wire around the three loops to complete a second circumference of the loops.
* This results in multiple contact points that are secured.

NOTE: There is also a method of using a pair of Slinkys as an In-the-Room "EWE" Antenna. But that is a topic for another time.

.

Given the way Doc Scott treats his hired hands, it's remarkable that he can even find doofusses to work for him.

.
"The Slinky is fun, but calculations of its performance relative
to a straight wire are discouraging.
.
Below resonance it's just a hunk of wire, only slightly better
than a straight wire of similar length.
.
It's a relatively efficient antenna at resonance (which for a
"standard" slinky is around 7 MHz), but above resonance
it is less efficient than a straight wire of the same length.
.
For HF reception, efficiency generally matters most at the
higher frequencies where the Slinky's efficiency is in decline."

Yeah

they just had a show on chupas. It's so funny how they have all these wacked
out con artists
on the show. At least Art Bell shows his disbelief a little more with these
guys. Some shows are fun but I think Noory has the personality of a
pencil...

< Snip >

Congratulations! You got it right there above. I sniped the rest.

DRM benefits the broadcaster not the listener.

In reality it would seem as though RCMP are the ones who screwed up, rather than the fellow from Texas. Exchange programs have been fairly commonplace for a very long time and if the RCMP didn't have the brains (Duh!) to properly instruct the gentleman from Texas as to what their rules and regulations were, then that is the fault of the RCMP rather than that of the officer from Texas.

So therefore, you, 'tard boy are actually the one who screwed up by trying to portray the fellow from Texas as being in the wrong.

I'm not surprised.

When you folks up there get your %#&@ together, be sure to let us know.

Good quality non amplified bookshelf speakers are good option for most tabletop radios.

From what people are posting about the radio, it has its problems and buyers may have returned them to the sellers. If you look on ebay, I get the feeling that distributers dumped them and the ebay bulk buyer / seller is trying their hands at selling them.

I think I will keep my $10 and move on.

It also should be noted that Yaesu's CAT adapter (or *one* of them if
they did multiple designs) was more than a level converter -- it had
optical isolation to avoid any ugliness with ground loops or the like.

I own both the bell and howell and the coby (link below). The coby was bought at ABC instore which often runs the radio for a hair under $8.00. It is a superior radio to the Bell and Howell for the simple reason that the poor analog dial is replaced by a digital readout with manual dial controll. Neither of these should be compared with any of the numerous $40.00-$100.00 portable shortwave radios commonly available from any number of sources. However for $10.00 or less (Coby), they very well accomplish their task as the lowest rung on the ladder shortwave capable radios. If you can spend between $45.00-$65.00, I would recommend the Degen/Tecsun 1103. The jump in features/quality/performance is huge from what you get with the 2 $10.00 radios mentioned. But if your intended use and/or budget dictates something in the low end range then I say go for it, giving the nod to the Coby.

An R8 they ain't, but who would expect to find an R8 class radio for

$10.00?

Good luck and happy listening

Give it up 'tard boy. It wasn't a funeral, it was an anniversary. Please, try to pay attention.

It's not what one wears, it's what's in ones heart.

Now go take those meds.

It's not what one wears, it's what's in ones heart.

WRONG!

Meds scmeds. An official of the United States Government should always
wear suit and tie to and official function. Talk about an underdressed
fool and he came across that way to the rest of the world too.

Doesn't this thing use XM's rumored ''Connect and Play'' scheme where
all the brains are in the base of the antenna and the only thing in
the radio is a control bus/audio interface?  Does the XM antenna plug
look like a coaxial or like a Mini-USB?

>> Third Columnist Implicated with Payola Charges
>>
>> By E&P Staff
>>
>> Published: January 27, 2005 11:00 PM ET
>>
>> NEW YORK Michael McManus, whose syndicated column, "Ethics &
>> Religion," appears in 50 newspapers, was hired as a subcontractor by
>> the Department of Health and Human Services to promote an
>> administration marriage initiative, according to an article posted
>> yesterday by Salon.com, the online magazine.
>>
>> Senior writer Eric Boehlert wrote that Salon had confirmed that
>> McManus "championed the plan in his columns without disclosing to
>> readers he was being paid to help it succeed."
>>
>> This report emerged one day after President Bush ordered his Cabinet
>> secretaries to stop hiring commentators to help promote administration
>> initiatives, after revelations surrounding commentators Armstrong
>> Williams and Maggie Gallagher.
>>
>> According to Salon, Dr. Wade Horn, assistant secretary for children
>> and families at HHS, had responded to the latest report by announcing
>> that HHS would institute a new policy that forbids the agency from
>> hiring any outside expert or consultant who has any working
>> affiliation with the media. "I needed to draw this bright line," Horn
>> told Salon. "The policy is being implemented and we're moving
>> forward."
>>
>> McManus could not be reached for comment.
>>
>> Horn told Salon that McManus was paid approximately $10,000 for his
>> work as a subcontractor to the Lewin Group, which was hired by HHS to
>> implement the Community Healthy Marriage Initiative. McManus provided
>> training during two-day conferences in Chattanooga, Tenn., and also
>> made presentations at HHS-sponsored conferences.
>>
>> Horn said he first learned about the payment on Thursday.
>>
>> "In the wake of the Gallagher story," Boehlert wrote, "he asked his
>> staff to review all outside contracts and determine if there were any
>> other columnists being paid by HHS. They informed him about McManus.
>> Horn says the review for similar contracts continues."
>>
>> Horn said HHS was not paying Gallagher and McManus to write about Bush
>> administration initiatives but for their expertise as marriage
>> advocates. "We live in a complicated world and people wear many
>> different hats," he told Salon. "People who have expertise might also
>> be writing columns. The line has become increasingly blurred between
>> who's a member of the media and who is not. Thirty years ago if you
>> were a columnist, then you were a full-time employee of a newspaper.
>> Columnists today are different."
>>
>> In 1996, McManus co-founded Marriage Savers, which, among other
>> things, asks clergy not to conduct marriage ceremonies unless the
>> couple has had lengthy counseling first.

Blow it out your ass, Flanders.  Religion is a tool of oppression.
The Bible is a mindfuckers handbook.

The Church is the Antichrist.

I like to buy shelf system speakers at yard sales.  A 4" speaker in a
relatively large plastic baffle sounds pretty good.  Beware of 2-ways,
the HF speaker just makes the noise worse.

On 28 Jan 2005 19:02:21 -0800, sdaniel13@nyc.rr.com wrote:

# 'Blue' radio to debut in Memphis

Ed Hicks

Jerry Springer is not coming to Memphis radio -- at least not yet -- but Al Franken is. Franken, the former Saturday Night Live comedian who made a splash last year with his book about Fox News, will be featured on a new AM format starting Friday.

Entercom Memphis will change the call letters of radio station WJCE-680AM on Friday, and will launch a liberal talk radio format under the name Progressive Talk 680 WWTQ-AM, broadcasting the Air America Radio network.

Operations manager Jerry Dean says the station will go with the Air America format for the first few months, but hopes to add a live morning show thereafter. The station has not decided who will host that show, Dean says.

The station's new format will offer current political topics, social activists, occasional comical twists and "a creative approach to liberal talk by the best artists available," he says. It also will offer local news, weather and traffic.

Air America is heard on 47 stations from Los Angeles to Washington, D.C. The network's appearance on WWTQ-AM will mark its debut in the South. Dean says it's about time.

"Shelby County is a blue county in a red state," Dean says. "65% of Shelby County voters went for Senator Kerry. Plus, it's different. And when you can bring a format that hasn't been done before, that's half the battle."

Entercom Memphis is a division of Entercom Communications Corp., which is based in Bala Cynwyd, Penn., near Philadelphia. The company is the fourth-largest radio broadcaster in the nation.

Entercom is not the only broadcast company that's trying a progressive format. In Cincinnati, arguably the nation's most conservative major city, Clear Channel Radio has launched a progressive format on WCKY-AM, offering Jerry Springer, who once served as mayor of Cincinnati.

Springer's talk show is not yet syndicated. Dean says Progressive Talk 680 WWTQ-AM has no plans to offer it.

The station's scheduled lineup kicks off at 5 a.m. with "Morning Sedition" and ends at midnight with "The Mike Malloy Show." Franken will be on the air from 11 a.m.-2 p.m.

The other programs currently on the schedule include "Unfiltered," "The Randi Jones Show" and "The Majority Report."

WWTQ-AM's signal reaches Tennessee, Mississippi, Arkansas, Louisiana and Missouri, making it the most powerful AM signal in the region, according to Entercom.

Besides Memphis, Entercom operates stations in Boston; Seattle; Kansas City; Indianapolis; Milwaukee; New Orleans; Denver; Portland, Ore.; Sacramento, Calif.; Norfolk, Va.; Buffalo, N.Y.; Providence, R.I.; Greensboro, Greenville/Spartanburg, N.C.; Rochester, Minn.; Madison, Wis.; Wichita, Kan.; Wilkes Barre/Scranton, Penn.; and Gainesville/Ocala, Fla.

According to Intellicast: the mean temp. was 32, the max temp. was 37 and the
low temp. was 26.

Hardly 'sub zero', 'tard boy. You lose again!

There is some security with Wi-Fi. Especially with the newest routers.
Wireless is becoming very popular. So broadcasting to neighbors is highly
remote with improved WiFi products.

I agree that this is what SHOULD happen, but of course it doesn't always work out that way. In the course of correcting one set of problems, one often just creates a whole new set. Also, I'm still not clear on the role of Drake in the development of this new Eton receiver. I don't see anything about it on the Drake website, whereas I do see the Satellit 800 on the Drake site. Will Drake repair defective E1's, as they do the Sat 800's? I keep seeing the Drake name attached to the E1, which is encouraging; but what, exactly, does Drake have to do with it?

We just have to hope that things work out this way, but there are no guarantees.

Remember, it has been four years since

I'm with you there. I also don't think that the AM/MW/SW and FM will be a big selling point with people who are shopping for satellite radios....which makes me question the wisdom of combining so much in a single package.

Let us keep our fingers crossed!

Steve

OK I think I understand it now.
My sisiter has a HP laptop with built in wireless
support. I took it to work and we have a commons
area with an unrestricted WiFi port.
I played with her PC orver lunch, while several other
people used the same WiFi "port/device/wrieless hub".
You must have a hub that also has WiFi capacity.
If you have that, then you should be able to add several
additional WiFi users. At some point, about 5  in
the only situaiton I was in, the network gets real
slow. Even more so if someone is downloading
large data (think MP3) files.
So IF your router has built in WiFi, and you have
additional USB WiFi devices then yes you should be
able to add more users. The exact how to wil
depend on security issues.
When my aunt came in for Chrstmas, the hotel they
stayed in had WiFi. But when she fired up her laptop,
she connected to the next door hotel's WiFi port.

Terry

If it says mfd it should mean mili-farads - not micro-farads.

You only need one good firewall for your computer.Road Runner already
has a firewall and I have Norton System Works 2005 with GoBack and I
have Lavasoft Adaware.It works for me.

If you are useing a computer or computers via WiFi,especially if you are
working on important data,files,or whatever,make sure you enable some
good encryption.At  www.komando.com   (by the way,her radio talk show is
on the radio Saturday mornings from 9:00 AM to 12:00 PM,central time
zone,I am listening to it right now) type in some keywords in her
website search window of whatever you are looking for.It is good to get
her free email newsletters too.I use Road Runner   www.twcjam.com   for
my computer.

"ShortwaveMan" <qrz@radio.com> wrote in
news:eVFKd.647$Nn1.463@newsread1.news.pas.earthlink.net:

I had the DX-394, I liked it. I bought mine at a HAM Fest, for about $120. When I got it home, I realized that the display LCD segments showed signs of being dim, maybe some were missing. I took the radio apart, then the display assembly. If memory serves me right, they used a contact pad to transfer the electrical signals to the completely removable LCD display. I cleaned the contacts (and probably the LCD Display where it contacted the pad), and reassembled. The display was as good as new. I do believe that desoldering and resoldering of a shield for the display was necessary.

I always get a chuckle when the topic of the DX-394 comes up on this NG. Despite some people's assertions that the radio is not that good (I do not hold those assertions), the DX-394 has quite a following. It amazes me the price that people get for the DX-394 on e-bay.

Anyway, thanks for the suggestion, I'll look at the tuning step next time. I use a Yaesu FRG-100 and an Icom R-75, so when I was unable to receive the signals per my original post, I tried both radios. But it didn't help.

Thanks.

Soliloquy

During the dot.com boom, they were laying underground fiber all over.
(Downtown Seattle was especially bad, as the place was boomtown squared).
And most of it is lying in the ground unused because of "The Last Mile"
problem.  It's as expensive to build the local distribution network to
get it from the fiber companies hub to individual customer sites as it
is to build the long distance network.

So along come the investor owned electrical utilities, who would just
love to have an unregulated business (so that they can get a more
profitable tap on the consumer's veins) yelling "WE CAN DO THAT".

With BPL they can set up in the business to compete with the cable and
telephone companies.  So what if the stuff doesn't work, they can replace
it later with the same hardware the cable company uses.  BAIT AND SWITCH.

And the regulated rate payers will probably foot a good part of the bill
because the whole company isn't making the profit levels the regulators
will allow.

No, there will be no problem. The ground of the static discharge unit, the
attenuator and the radio are all common to the coax shield and should bonded
to a ground rod.

By going on and on about what Cheney was wearing,
the "media" are dismissing the issue of the Holocaust.

73,

Steve

If Ten-Tec holds true to form, they will not support the software for the radio for more than 1 year - then you are forgotten.  The RX-350 firmware has not been updated in well over 2 years.  Ten-Tec doesn't even answer e-mail enquiries on the subject.

You are quite right to question this. I have an antenna wire laying directly on my roof. It's been there for over ten years and works as well as the one I have in the back yard that's totally suspended. The one on the roof is bare wire. I have used it for transmitting where it also works fine, as long as it's not raining. In wet whether, the SWR goes nuts but this would not be of any concern for receiving. You are right about the house electrical wire. Thousands of ham antennas have been made from it.

"H Davis" <hdavisREMOVE@wowway.com> wrote in message news:deKdneb8Pt0rnGTcRVn-hg@wideopenwest.com...

> First, my thanks to Laura for asking a question that guys probably wouldn't ask anymore than we would ask directions if lost. In both cases we seem to be satisfied with wandering around.
>
> Also, once again thanks to Joe for a somewhat complete answer to Laura's question. (I'd love to get Joe over here for a long conversation and just pick his brain for a few hours.) But I would like an even more complete answer. Joe and others seem to feel that you can't just lay a wire on your roof and hold it down somehow and still get better reception that you get with the whip indoors. I'm thinking you aren't satisfied with that answer. If you are, I apologize. I'm not satisfied.
>
> I've heard all kinds of people suggest that you can tack a wire to the fence in your backyard and run a wire to your radio and get decent reception or maybe just better reception. "Better reception than what?", you ask? Good point. I guess I don't recall what the alternative was for sure, but I think it was one of us neophytes trying to get away from the whip again. And I haven't heard it just once; I've heard it many times. Did they not actually mean tack it to the fence? Did they really mean use stand-offs and attach it to the fence. I don't think so, because most asking the question were trying to find a way to hide the antenna from the neighbors or the homeowners association.
>
> I've heard others say they live out in the boonies and have laid 1000 feet of long wire on the ground and obtained terrific reception. (I suppose a thousand feet of any kind of wire is bound to receive something!) This seems very much like laying a wire on the roof of one's house with one major difference: out there in the boonies you would have less interference from the junk most of us have in our homes and those next door to us.
>
> Finally, I assume Laura was talking about laying insulated wire on her roof to improve reception. I'm not sure that bare wire would be a no-no (heck, I'm new to this stuff, too), but I've heard the type of wire doesn't really

If that article wasn't so frightening, I'd laugh.  Hard to believe that a
naked breast is just fine for a new born and a few years down the road  it
is a "traumatizing" thing to see.

I'm living on the same planet with these people too.

Respectfully,

Michael

Where do you see that broadcast? I looked at their schedule and I don't see it at that time.

ADONIS,

How do you know that the Alternator Whine
is coming in from the Antenna ?
.
Turn the Radio On and the Volume Up so that you can
clearly hear the Whine.
.
Disconnect the Antenna from the CB Radio does the Sound
of the Whine Stop or is it Greatly Reduced ?
+  Then in-fact the Antenna is the Source of your Noise
{Whine} Problem.
-  However if the Whine is just as Loud as when the
Antenna is 'connected' then the Problem is elsewhere.
.
Two Possible Elsewheres :
*  The CB Radio Ground.
-  Recheck your Radio's Case Ground Connection
+  Use a 4"-8" piece of Braided Webbing as a Ground Strap
between the Auto's Frame and the Radio's Case.
*  The DC Power Input Wires.
+  Use a Noise Suppression Capacitor on both DC Power Leads
going to the Radio.
+  Wrap the DC Power Leads in Foil.

```

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

Some people believe that belonging to a local church,
temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten
commandments or just being a good person will get
them to Heaven.

There are many other beliefs as well, but the good
news about God's way to Heaven is found in the
Holy Bible.

The good news is that God came from Heaven to earth in
the person of Jesus Christ over 2000 years ago and
died for our sins(misdeeds). He was born in the land
of Israel supernaturally to a virgin Jewish woman
named Mary. He lived a sinless life for thirty-three

years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the

GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!
Internet Evangelist R.L. Grossi

No doubt the VHF convertor will be removed and sold in a seperate auction.

Radio-Mart will sell the radio as "almost mint condition, this radio is
very clean and you won't find another one like it blah blah, but any faults
that are found by the buyer and NOT PICTURED are your fault," but with
400x300 washed out images attached.

Scott was a sideshow barker,
snake oil-cum-"holy water" salesman
and all-around con man,  a white man's Reverend Ike.
He takes the money of the weak minded and foolish.
He's getting just exactly the "kindness"
and "understanding" he deserves.

I got one uplink and that router sends the signal to another computer (USB wireless Adapter). What I am asking is for a third computer can I use a router to communicate with the uplink or another USB wireless adapter. I know a USB wireless adapter will work, but I was wondering if a wireless router can take the place of the adapter. I assume likely not since a router is made to send signals out. So can a router replace an wireless USB adapter.

Bob Sillett's colorful Shortwave Log has a lot of bells for being freeware.

Requires no interface, just a standard cable.

Allows semiautomatic downloading of various online freeware schedule databases (the FCC Intnl SW broadcasting database, Primetime's listings, ILG, the entire FCC amateur callsign database, all LongWave airport NDB;s, etc.). The program converts them all over into its own format (JET). You can filter the database with a few mouseclicks from tens of thousands down to a few hundred or less: e.g. asking it to now show whats playing right now in English coming out of Costa Rica. You can autolog receptions, later scan in a received associated QSL card. It can format a portion of the log, say a month's worth into the exact layout needed for reporting your catches to the the world's major SW clubs.

I control my ICOM R75 via Shortwave Log with a cheap laptop PII 300MHz, 128 MB RAM, Win98SE, although with XP Shortwave Log has sound support too!

Xref: g2news1.google.com rec.radio.shortwave:49459

Interesting thing happened tonight. For some time I've been using a
speaker that's received plenty of criticism: the Drake MS8. Earlier
tonight I heard VOIRI (Voice of the Islamic Rep. of Iran) on 6120 khz
and the signal was incredibly strong and clear. I decided to sit back
and listen, but the announcer's voice was just so bassy and 'muffled'
sounding that it wasn't always easy to understand her.

So, I decided to get an amplified Sony speaker out of my closet and hook it up to my R8B. The Sony speaker definitely produced a sound that was somehow 'smaller'. Even so, the announcer's speech was perfectly intelligible on the Sony, while it wasn't on the MS8. From now on, I think I'm just going to use the Sony speaker. I think there are still better speakers out there and when I find one I'll 'trade up'; but for now the Sony will do.

I guess the lesson here is: Don't overlook the significance of your speaker!

Steve

You're right, of course. Death is usually a pretty sad time for all involved. I wish him and his family all the best and may they get the strength they need to get through this trial. The good Doctor has amassed a great volume of work. It reflects his dedication to the calling.

mike

I don't know why death worries me..having lived such a pure, wholesome, modest, unassuming, self effacing and saintly life. I've won the Mister Modesty Awards every year for the last three decades running and I hardly ever mention it more than twice a week.

All in all, much like dxAce, I'm just too valuable a member of the Human race to be going across the Styx  any time soon.

If things are rising from say, the Planet, they must surely be DIVERGING from each other. This has been bothering me for weeks, so I'm starting to think I'm missing something. I've never read O'Connor, so perhaps a hint is in order.

news:cte9t1$rri$1@lust.ihug.co.nz:

Actually, it's rather useful. Maybe not in terms of glamorous programs with all the bells and whistles, but the program features a PAN function. You set (on the radio itself) the squelch to max, assign a frequency to VFO A and another to VFO B, and set the radio to search between these values. (such as 7.00 and 10.00 Mhz). Even though you initially won't be able to hear anything due to the MAXed squelch, the PAN function builds a graph representing the areas of greater and lesser signal strength. When the scan is complete, turn the squelch down, and using the left mouse button, click on any peak that seems likely to represent a signal. Viola, the radio tunes to that frequency. It might not be real time, since the scan takes a while, but a little experimenting even now shows that the scan continues even when the squelch is turned down all the way. (I do believe that the programmer recommends a higher squelch setting).

I don't know how old this program is, but it is listed as a "Legacy" program on this page:  http://tinyurl.com/4nlrq and no price is listed. Exactly what is Legacy software?

Anyway, the program also has a data base of established broadcasters, Listed as Utility, Shortwave, and AM Broadcast. Click on the Broadcaster, various frequencies are show that would be in use by that broadcaster, click on the desired frequency, and you are tuned to that frequency. I don't know how valid the data base is, but when you tune to a frequency that is represented in the data base, the program lists details of the broadcaster/s.

More than I expected, and I am still learning.

Thanks.

No. I don't check headers as a matter of course. I don't imagine for a second he'd use an anonymous remailer. He's not shy about saying what he means using his regular name. With nothing to hide, he has no need of anonymity.

mfd=Microfarads or uF. In other words buy yourself a nice big
electrolytic cap (about 30wvdc for make sure it surives) and put it
across the leads. Get it at Ratshack, or any electronic parts
supplier.

Good speakers do make a difference.  I like Bose center channel speakers
for use on radios that come with ones that aren't very good.

As slick as Radio-Mart is he could buy a bunch of those $10.00 Bell and
Howell radios and "cleanse" them and probally pass them off on eBay for
about $20.00 or $30.00.Brand new,never been touched by human hands! If
he is reading this,I want my cut.

Which is why some of their Chinese products are referred to as: "Hell & Bowel."  I'm afraid the actual Bell & Howell company has joined National, Hallicrafters, and Hammarlund in that great manufacturing center in the sky.

Best,

Joe

It's been a while since I've played with it, but the tlc/tk program is needed in order to run the tk-75 program.  If I understand it right, the tk-75 program was designed for Linux, and the tlc/tk program lets it run under Windows.

7.075 LSB 0518 UTC

It sounds like voices, but can't be resolved. Probably HAM, but what
format? USB/LSB/AM fails to clarify it, and it sounds like the simple
scrambling used by some telephones.

Any Ideas? I've heard it before.

Soliloquy

Good News!

Do you know how simple it is to go to Heaven after this
```

life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to
you so that you will not sin. But if anybody does sin,
we have one who speaks to the Father in our defense
Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you
saved.

Please tell your family and friends, thanks!

Have a great day!

Leonard Martin <lmarti49NOSPAM@bellsouth.net> wrote in
news:lmarti49NOSPAM-C52A2A.19055128012005@bignews.bellsouth.net:

I just have it connected to the High Impedence jack. One time (on the advice of a local HAM), I just terminated it with a Bananna Plug and pushed it into the center of the coax connector. I really didn't see much difference. My Yaesu FRG-100 has a selector on the back of the radio that needs to be set depending on the jack in use. The Icom R-75 has an antenna selector button and is represented in the LCD display as well. I need to specify Antenna 2 for the high impedence input that I use, otherwise the reception is almost nil. If the coax jack was used, Antenna 1 would be selected.

The indoor antenna is terminated in the same way.

For the outdoor antenna, the wire itself comes into the house and right to the radio. It comes through a small opening in the frame of the vinyl window, and comes across the baseboard to the radio. There is no metal nearby, and I have no problem with noise generated in the house, otherwise I would use coax until it was outside the house.

With the outdoor antenna, when I was renting a home with a very tiny back yard, I ran 2 outdoor antennas. One was on the diagonal across the yard, the other ran to the 4 conners of the yard. They in turn ran to a switch that allowed me to select which antenna I wanted to use. The shorter antenna actually came in handy often, producing stronger signals on certain frequencies.

Soliloquy

The first time I saw this radio was in an advertisement in Parade magazine about two years ago. After a brief search, I found that the best price for them was at Carol Wright Gifts. It seems that is still the case.

Start at http://www.carolwrightgifts.com/

and search for "shortwave". You get:

http://www.carolwrightgifts.com/cwg_v2/cwg_layout_base2.cfm?

mid_sec_page=cwg_prod_detail&seq_no=4&min_seq_no=600&SingleItem=94654&CFID=6784285&CFTOKEN=93332188

or

http://tinyurl.com/3lovm

Carol Wright is selling Bell & Howell 9-Band Radio, Item 94654, for $8.99. It's in the category Leisure & Travel: Electronics. I don't know about the shipping charges.

Dear Soliloquy,
On my receiver, radio shack dx 394, very strong signals in sideband can be difficult to clarify. What I do is set the "step" to 0.1 Khz then reduce gain down to just above inaudible, then try again. Sometimes I have to play with the knob to get the sound audible. You might try that. I am assuming you have a better radio and it might have some other options for sideband tuning. Best Wishes

Peace We are the Providence of God +

It was a "profile stop". Guy did look like a trafficker, then twitched and acted so nervous that they were pretty sure he was. The catch-release and stop-again is also common, as it really makes the guilty snap - in this case no harm came and he went on his way - to whine, whine, whine.

And at this stage, whining does no good. The so-called "war on drugs" has permanently erased American freedoms that were earned only at the end of a gun barrel, and could never be restored except by same. Even if Canadian freedoms were a 'gift of the crown', I suppose you still feel a touch of remorse at the sight of them washed away. Get used to it.  In the efforts to control the gang-banging murderous subterranean economies of drug culture, we have all lost precious freedoms, yet the original problem remains worse than ever.  Until we have no freedoms, and still have drug wars. Then what?

No I don't see the humor in it either, and I hope Canadians understand where it's coming from. The real irony, is that it was a Canadian cop who got upset, and he surely does the same exact thing to citizens of his own community, and it's fine with him then.

Jack

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

Some people believe that belonging to a local church,
temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

One of the BEST software for the R75 is RXplus. It's not free but you have a
30 day trial. Download it and try it. It has so many features like auto ECSS
and decoding, but too many too mention. I worked with the coder of this
software for the Kenwood R5000.

He controled my computer thru remote desktop from Canada to here in Florida.
It took him a couple weeks and he added the R-5000 to the list his software
works with. You'll love it and won't be able to stop fooling aound with it.
It even works on the Drake R8a/b.
It also can do DRM in some cases with it's built in 12Khz IF.

Here:
http://www.cam.org/~noelbou/RxPlus/

Have fun
Lucky

I answered your question. Maybe if you spent some time thinking about it
you will understand my answer.

I called nobody including you a name but now I will call you ungrateful
for calling me a "turd" for answering your question. Stop projecting
your own bad behavior on others Mr. Whoever.

DaviD,
.

The One Big LIE is in the use of the Word "Progressive"
.
This is a DISTORTION of the Truth for clearly Air America is Ultra-Liberal and Al Franken and other Air America Hosts are all Elitist.
.
Do Not Disrespect all those Good Honest MODERATE Forward Looking American's : republican, democrat and independent.  Who Are In-Fact True Progressives by Falsely using the Word Progressive and linking it to Air America and the likes of Al Franken.
.
Blessed by God with Life and Progressive by Nature thru Living ~ RHF
[Just an Old Retired Blue Collar Union Member - Dosvedanya T=ADovarisch]
. =20

Couple of years ago,the wal fart stores around here were selling Oregon
Scientific atomic clocks for about $11.00.(I didn't waste my money) My
big wall Clock plugged into a wall outlet keeps just as good time.And I
sure don't need anymore damn clocks either! I have to watch Red River
movie on tb now.

I was listening to a show on shortwave this afternoon, and they were discussing the fight to implement BPL around the world. They were saying that HAMs are being mischaracterized as lunatics and relics so that they can sway the public to support the implementation of BPL.

I hope the people so desperate for BPL are never in an area of widespread disaster, say vacationing where the tsunami hit. Though the BPL interference would be gone with the destruction of the powerlines, likely HAMs would not be there to help either, since the abolition of their hobby would leave them with little interest or equipment.

Though the computer oriented people are zealous to implement another unneeded communication mode, I hope that HAMs and SWLers continue to resist the implementation of systems causing widespread interference to communication, especially communication that can be and is routinely used to help the public when disasters strike.

Soliloquy

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

Some people believe that belonging to a local church,
temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten
commandments or just being a good person will get
them to Heaven.

There are many other beliefs as well, but the good
news about God's way to Heaven is found in the
Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Not strange at all.  Sat700 went for $1000 a few months back.  Now go
tote your portable or you're liable to start thinking the Iraq
invasion was justified.  Just a few American boys right?

It's a good thing, too. I went to Radio Shack last week for just this item. I told the salesperson I needed a variable tuning capacitor. They gave a me a blank look. I elaborated, telling them that the thing has lots of aluminium fins and a shaft for turning them back and forth. He promptly escorted me to the potentiometers.

Not to be put off, I went to another Radio Shack and repeated my description. This time, I got led to, you guessed it..the automotive FUSE display.

pathetic..by now it was mid day and time for lunch. I went into a nearby Wendy's and had a salad with Ranch dressing. It was ok, but I HAD ordered French dressing.

Either the quality of personnel is dropping very badly, or there's not much training being given. It's hard to be helpful when a know nothing customer knows infinitely more than you do.

Yeah, and why do I have the feeling you're the one who bought it.

Anyone who'd spend that much money on a Sat 700 should contact me
immediately regarding a grilled cheese sandwich sporting an intriguing
image. :)

Not in the USA.

================================================

Only metric prefixes for 10+6 or more have an upper-case abbreviation (e.g., M = 10+6, G = 10+9, etc.). In particular, note that the prefix m indicates 10-3 and M indicates 10+6. The difference between an upper-case M and a lower-case m is nine orders of magnitude! One should be warned that American manufacturers of capacitors often use "mF" or "MF" to indicate microfarads, a practice that is both incorrect and misleading.

The proper abbreviation for "kilohertz" is "kHz": only the "H" is upper case.

Note that the proper abbreviation for "second" is "s", not "sec".

The same abbreviation is used for the singular and plural form of a unit.

A period is not placed after an abbreviated unit, unless it is at the end of the sentence.

```
http://www.rbs0.com/tw.htm

==================================================

==================================================
     * mF: Milli-Farad, 1x10-3 Farad (1,000th of a Farad) - uncommon
     * uF: Micro-Farad, 1x10-6 Farad (1,000,000th of a Farad)
     * mF: Micro-Farad, a very, very old term, still sometimes used in the
US (True!) - Causes much confusion.
     * ufd: Micro-Farad, another very old term, still used in the US
     * mfd (or MFD): Yet another antiquated term - US again!
     * nF: Nano-Farad, 1x10-9 Farad (1,000,000,000th of a Farad) - Common
everywhere except the US
     * pF: Pico-Farad, 1x10-12 Farad (1,000,000,000,000th of a Farad)
     * mmF: Micro-Micro-Farad, another extremely old term, also still used
sometimes in the US

I think they will.  Being able to punch in a frequency and get high quality audio without fading, static crashes, etc. will sell people -- who can afford it -- on the technology.

> I have played with DRM and
> I am very underwealmed. DRM radios consume much more
> energy, IE much shorter battery life, then analog.

This is mainly a question of how well integrated the radio chipsets can be made; very quickly you get to the point where powering the speaker itself will dwarf the energy consumption of the radio itself.  I expect the actual DRM decoding can be done with well under 100mW, probably more like 10mW in the near future.  These are power levels that are easily obtained via solar power.

> The greater radio complexity also promises
> greater user headaches.

I think it actually makes usage a lot simpler.  What do you think's simpler to use.. a cell phone, or an amateur radio hand-talkie operating on 2m through a repeater autopatch?

I think the biggest stumbling block by far is going to be (1) getting broadcasters to adopt the technology and (2) getting people in places that have the most to gain from the receipt of such broadcasts the radios at a price they can afford.

"A listner of limited
means in a poor country will hardly be in the position to buy a
potentially very expensive digital receiver."

I agree with you 100% -- hence the real challenge to make digital radios
dirt cheap.  Interestingly, though, at a certain quality level digital
receivers actually become cheaper to build than analog receivers!

> DRM benefits the broadcaster not the listener.

I bet a lot of listeners to, e.g., satellite radio in the U.S. and Europe would disagree with the assessment that digital radio doesn't benefit the listener.

But you do have to keep in mind that companies exist to make a profit. Unless you'd advocate that only governments should have broadcast rights, the market will insure that people 'get what they want' when it comes to broadcasts -- even if that does imply that the content is crap relative to what you or I might desire.

You're right, scrambled transmissions on the amateur bands are not
permitted.

People have been able to punch in frequencies for an affordable price for about twenty years now.  It's doubtful there's more SWLs now than there was back then.

Also, digital radio might not have the same fading and static crashes that analog radio has, but I can't imagine how digital radio can be free from dropouts and digital SW certainly can't fix the occasional dead propagation problem.

The same could be said for direct broadcast satellites.  Such satellites
would provide highly reliable, clear sounding radio (or TV!}.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord

and Saviour worry about losing their salvation. The Bible
teaches Christians that we can never lose our salvation no
matter what happens.

The Bible says it this way, "My dear children, I write this to
you so that you will not sin. But if anybody does sin,
we have one who speaks to the Father in our defense
Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you
saved.

Please tell your family and friends, thanks!

Have a great day!

I've never tried ground radials but it's worth a try. Would you still
run a short ground wire too?

```

It's amazing what you can hear when the conditions are just right. I once heard the 5th harmonic of a Chinese domestic shortwave station on 25250. (5050 x 5). It was grey line reception in the morning a few summers ago. This was when the solar flux was much higher than now. I figure the power of that harmonic was less than 100-watts. The propagation path was about 10K-miles.

That VOA site and others played a major role in winning the Cold war, so I would think the current administration would gladly help to preserve it.

Jan 26, 2005

Special event station EM60J will be on the air February 4-11 from Ukraine to mark the 60th anniversary of the Yalta Conference. The historic 1945 talks brought together the "Big Three" Allied leaders - Great Britain's Prime Minister Winston Churchill, US President Franklin D. Roosevelt and Russia's Joseph Stalin--to discuss post-World War II reorganization of Europe. The conference's primary purpose was to re-establish the nations that had been conquered by Nazi Germany, and one result was the partitioning of Germany into US, Russian, British and French zones. QSL via UU5JYA or direct to PO Box 378, Yalta 98600, Ukraine.

The so called 'handling' charge used to be included in the price of merchandise until some businesses decided they could make extra profit by charging a seperate handling fee in addition to shipping. This also allows them to lower the price of the merchandise and make up the difference with the handling charge. A really reputable company doesn't do this.

Just because a few Southern Democrats voted for Kerry does not mean that a liberal talk radio format will last long in the conservative South.  I don't think this will last very long at all.

Why should they?  Boring, boring, boring.  I had the misfortune to pick up
Al Franken once and listened for 5 minutes.  All I heard were his laughing
at his sick attempts at humor.

Nope, but I have a Sony 7600GR I might be willing to sell you for $800.
There's nothing 'strange' about that price, mind you. I understand that
one once sold on Ebay for $850.

```

Greetings.

I'm keeping my eyes open for a good Panasonic RF-2200 on eBay.  I'm in no hurry, so I'll just keep watching and the "right" one (great condition, that I can buy cheap) will certainly come along eventually.  I just saw a nice one go for $127.

However, I'm also wondering about the RF-2600.  Those also show up for sale from time to time.  There is far less documentation and fewer reviews for this model, and I can't find a single side-by-side comparison.  Is the 2600 the equal of the 2200 in terms of performance and build quality?  If so, I would think that having the digital display would be a nice addition.  If the radio quality has been downgraded, though, it wouldn't be worth it.

Knowledgeable ones, please advise.  Thanks.

Jeff

There's a rhyme that's called a "Turd for a Tard" and I turned it into a song. It would be a great serenade for old Bill. :)

Good News!

Do you know how simple it is to go to Heaven after this

life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to
you so that you will not sin. But if anybody does sin,
we have one who speaks to the Father in our defense
Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you
saved.

Please tell your family and friends, thanks!

Have a great day!
Internet Evangelist R.L. Grossi

It's like a racing boat (Sony) runing circles around a fishing boat
(Degen).
Both are SW receivers but the Sony does MUCH better in every aspect.
Although the Degen fits the bill at the low cost end.

I made a 15-meter dipole antenna out of some wire I unwound from the yoke of
a junked-out television set, and strung it up near the ceiling.  It's held
in place with pushpins, too.  Living on the third floor must help, I think.
I've heard SW stations all over the world with this.

I just don't find this to be true.  I owned both along with a 909 and a 1102.  I did a rudimentary side by side test of all four one evening, each on a 75ft long wire.  I found the following:

The 7600 synch detector offered only minimal improvement over the others.  Negligible even.

The 909 and 1103 had slightly more sensitivity than the others.

The 909 was more selective than the Degens and about on par with the 7600.

The 909 is by far more ergonomic and straight forward to use than all of the others.

The test was done by tuning each through the same frequency range and logging all stations picked.  Honestly the 1103 had a slight lead on overall sensitivity and the 909 and 7600 followed close behind.

Don't necessarily believe all the hype you hear about the 7600.  It *is* a good radio but not necessarily better than the others mentioned.  I sold my 1103 and 7600 and kept the 909 and 1102.

Best,
-Al A.

Wow, that sounds truly inspirational!

Other anniversary special events around the globe this year will include the Hindenburg Landing Celebration (Germany), and the Welcome Wagon Donner Party and Hoedown (Sacramento, California).

Long BUT Worth Reading........

>Guest Column: No Relief in Sight for the Lincoln
> By Ed Stanton
>
>
> It has been three weeks since my ship, the USS Abraham Lincoln, arrived off the Sumatran coast to aid the hundreds of thousands of victims of the Dec. 26 tsunami that ravaged their coastline. I'd like to say that this has been a rewarding experience for us, but it has not: Instead, it has been a frustrating and needlessly dangerous exercise made even more difficult by the Indonesian government and a traveling circus of so-called aid workers who have invaded our spaces.
>
>
> What really irritated me was a scene I witnessed in the Lincoln's wardroom a few days a go. I went in for breakfast as I usually do, expecting to see the usual crowd of ship's company officers in khakis and air wing aviators in flight suits, drinking coffee and exchanging rumors about when our ongoing humanitarian mission in Sumatra is going to end.
>
>
> What I saw instead was a mob of civilians sitting around like they owned the place. They wore various colored vests with logos on the back including Save The Children, World Health Organization and the dreaded baby blue vest of the United Nations. Mixed in with this crowd were a bunch of reporters, cameramen and Indonesian military officers in uniform. They all carried cameras, sunglasses and fanny packs like tourists on their way to Disneyland.
>
>
> My warship had been transformed into a floating hotel for a bunch of trifling do-gooders overnight.
>
>
> As I went through the breakfast line, I overheard one of the U.N. strap-hangers, a longhaired guy with a beard, make a sarcastic comment to one of our food servers. He said something along the lines of "Nice china, really makes me feel special," in reference to the fact that we were eating off of paper plates that day. It was all I could do to keep from jerking him off his feet and choking him, because I knew that the reason we were eating off paper plates was to save dishwashing water so that we would have more water to send ashore and save lives. That plus the fact that he had no business being there in the first place.
>
>
> My attitude towards these unwanted no-loads grew steadily worse that day as I learned more from one of our junior officers who was assigned to escort a group of them. It turns out that they had come to Indonesia to "assess the damage" from the Dec. 26 tsunami.

>
>
> Well, they could have turned on any TV in the world and seen that the damage was total devastation. When they got to Sumatra with no plan, no logistics support and no five-star hotels to stay in, they threw themselves on the mercy of the U.S. Navy, which, unfortunately, took them in. I guess our senior brass w as hoping for some good PR since this was about the time that the U.N. was calling the United States "stingy" with our relief donations.
>
>
> As a result of having to host these people, our severely over-tasked SH-60 Seahawk helos, which were carrying tons of food and water every day to the most inaccessible places in and around Banda Aceh, are now used in great part to ferry these "relief workers" from place to place every day and bring them back to their guest bedrooms on the Lincoln at night. Despite their avowed dedication to helping the victims, these relief workers will not spend the night in-country, and have made us their guardians by default.
>
>
> When our wardroom treasurer approached the leader of the relief group and asked him who was paying the mess bill for all the meals they ate, the fellow replied, "We aren't paying, you can try to bill the U.N. if you want to."
>
>
> In addition to the relief workers, we routinely get tasked with hauling around reporters and various low-level "VIPs," which further wastes valuable helo lift that could be used to carry supplies. We had to dedicate two helos and a C-2 cargo plane for America-hater Dan Rather and his entourage of door holders and briefcase carriers from CBS News. Another camera crew was from MTV. I doubt if we'll get any good PR from them, since the cable channel is banned in Muslim countries. We also had to dedicate a helo and crew to fly around the vice mayor of Phoenix, Ariz., one day. Everyone wants in on the action.
>
>
> As for the Indonesian officers, while their job is apparently to encourage our leaving as soon as possible, all they seem to do in the meantime is smoke cigarettes. They want our money and our help but they don't want their population to see that Americans are doing far more for them in two weeks than their own government has ever done or will ever do for them.
>
>
> To add a kick in the face to the USA and the Lincoln, the Indonesian government announced it would not allow us to use their airspace for routine training and flight proficiency operations while we are saving the lives of their people, some of whom are wearing Osama bin Ladin T-shirts as they grab at our food and water. The ship has to steam out into international waters to launch and recover jets, which makes our helos have to fly longer distances and burn more fuel.
>

```
  >
  >   What is even worse than trying to help people who totally reject
everything we stand for is that our combat readiness has suffered for it.
  >
  >
  >   An aircraft carrier is an instrument of national policy and the big
stick she carries is her air wing. An air wing has a set of very demanding
skills and they are highly perishable. We train hard every day at sea to
conduct actual air strikes, air defense, maritime surveillance, close air
support and many other missions - not to mention taking off and landing on a
ship at sea.
  >
  >
  >   Our safety regulations state that if a pilot does not get a night
carrier landing every seven days, he has to be re-qualified to land on the
ship. Today we have pilots who have now been over 25 days without a trap due
to being unable to use Indonesian airspace to train. Normally it is when we
are at sea that our readiness is at its very peak. Thanks to the Indonesian
government, we have to waive our own safety rules just to get our pilots off
the deck.
  >
  >
  >   In other words, the longer we stay here helping these people, the more
dangerous it gets for us to operate. We have already lost one helicopter,
which crashed in Banda Aceh while taking sailors ashore to unload supplies
from the C-130s. There were no relief workers on that one.
  >
  >
  >   I'm all for helping the less fortunate, but it is time to give this
mission to somebody other than the U.S. Navy. Our ship was supposed to be
home on Feb. 3 and now we have no idea how long we will be here. American
taxpayers are spending millions per day to keep this ship at sea and getting
no training value out of it. As a result, we will come home in a lower state
of readiness than when we left due to the lack of flying while supporting
the tsunami relief effort.
  >
  >
  >   I hope we get some good PR in the Muslim world out of it. After all,
this is Americans saving the lives of Muslims. I have my doubts.
  >
  >
  >   Ed Stanton is the pen name of a career U.S. Navy officer currently
serving with the USS Abraham Lincoln carrier strike group.

It can't, of course, but digital broadcasts can still sound perfect when the signal to noise ratio of the transmission is such that no human could make anything whatsoever out of a standard AM or FM transmission.

The same could be said for direct broadcast satellites.  Such satellites

> would provide highly reliable, clear sounding radio (or TV!}.

Good point.  I suppose some of the push for DRM is so that the terrestial broadcasters can actually compete with satellite radio, just as cable TV in the US has been forced to upgrade its services given the competition from the DBS services.

byte_me, it's this current administration's classless arrogance, bereft of either humility or shame, that the world detests(never mind the fact Shrub's shills don't even know how to successfully wage war)!  Shrub's sycophants have been an absolute horror when contrasted against that family values republican'ts used to tout! Had a friend recently reprimand his daughter, & she replied "but daddy, the president doesn't have to be responsible; so why should I"? That's what these new millenium neocon nazis hath wrought!  So you get Shrub spokesmen like innate, whose pusillanimous postings begin & end with "'tard", rather than postulating cohesive counterpoint; proud republican't coccoon, whose yet to offer either fianiancial or moral support to those families scarred by an illegal war he supports(if the Iraq war aint illegal, why is Bombsfelldt worried about going to Germany & gettin' busted for bein' an international war criminal?); & obfuscative rants by rfi & telemud decrying America's "liberal" media! Am glad American corporate media dissected every misconception Bombsfelldt pimped to the public before the actual Iraq invasion, rather than lying down like 10 cent hookers accepting every fabrication as fact! Oops, apparently only Democracy Now's Amy Goodman(via Radio For Peace International) had the balls to not believe that hype! Perhaps the only positive aspect of Dubya Dubya II will be to watch their perfidious policies implode! Hopefully without collateral victimization!  As previously stated, the only Bush history will revere is KATE!!!

You need a better speech writer, 'tard boy.

Now go try to tote it, and don't forget to have mommy help you with your meds.

Nobody uses millifarads, except maybe the boom car crowd.  "mfd" or more
commonly "mf", prior to (the 1960's) metrification/SI rationalization
meant Microfarads.  And picofarads were "mmf" micro micro farads.

Yalta Conference,Febuary 1945,.(I had started school in September of
1945,I had a crush on my first grade school teacher because she was so
cute,at me tender age of only five years old,I actually wanted to have
sex with her too) Let me see,,, Roosevelt,Churchill and Stalin.Stalin
Murdered over eleven million rooskies by not allowing them to grow any
crops,hence they starved to death.Churchill gave up to easily,so did
Roosevelt,sitting there with that "look" on his mug,he knew he had been
HAD!

What would happen if the Communist Party of Iraq was elected? That would be fantastic, Bush would have to topple the democratically elected government of Iraq for being Commie!

For the money the DE1103 gives good performance. Within major
broadcast bands it delivers many signals and the dual filter helps in

some situations. And is does a good job of retrieving hams signals too.
It is quite compact and the ergonomics are good although not at the
7600 level. The tuning knob is a distinct plus for a radio in this
price range and makes band scanning fun.

There are a few shortcomings you should be aware of.
1=2E  Ihe receiver generates numerous image signals 900khz down.  Thus
much of the 6mhz band is repeated in an area where there are
potentially some interesting nonbroadcast catches.  Same goes for the
9mhz band generating images in the interesting 8.8 segment where
international aircraft may be heard.

2=2E  The usefuless of the 255 memories in the 1103 are compromised in 2
ways.  A. Degen decided to use hexadecimal numbering for it's memories.
While confusing to many, this scheme also means the keypad is useful
for only certain groups within the 255 memories.  B. The memory
retreival feature has a serious bug when used on FM and MW.  When a
stored channel is retreived from FM, the firmware also retrives the
highest numbered memory used for MW.  Likewise for retrieving MW
stations.  For those of us who flip between bands it means having to
continuall retune the other band.
3=2E  The signal strength meter for some reason does not work on FM as it
does on virtually every other multiband radio I'm aware of.

I've owned one for about a month now and do enjoy it.  It is not
perfect nor is it a replacement for the 7600 or the YB as some have
claimed.

BPL might be beaten, but it's going to be years in the fighting.
Many of us are going to be buried before victory over all
the money in this fight. In the mean time, we need a
work-around like that I proposed (and was rounded condemned for).
If you are one of the guys buried, I'd think a work-around
that allows you to continue using your equipment would be
a blessing, but I guess not.

> run a short ground wire too?

Per above, my 4:1 Balun/coax-feedpoint is already attached/connected
directly to a ground rod, not just near one. The radials will both be part
of common ground already, their tie-point at the same ground rod that the

feedpoint and Balun are attached to. Radials are normally shallow-buried, both for protection and to minimize pickup of yet more noise. It's a lot of work to bury long radials, so I will first just lay them out along the surface, then experiment with various coastal stations to determine if there is any gain from the radials.

Due to the lightning protection design at my station, any new ground radials also have to be bonded to the station ground and AC service entry ground, the entire system is common-bonded. Because it's winter time and small likelihood of lightning (we had a nearby strike during a snowstorm 2 weeks ago!) I will wait to add the bonding conductors until after the antenna is tested for any possible xmit/receive improvements. Those bonding connectors will  have to run 90 degrees from the end of each of the two new radials, and they may also alter the radiation pattern of the antenna. I'll let you know how that works out.

Jack

Don't be so sure, Tom.  At least 40% of the people in the South
lack the good sense to be a "red" person.  That's more than enough
money to keep Franken(stein) and (hot)Air America turning up,
like a bad penny, for years to come.

Then, for SW digital broadcast radio to be successful, the listeners will
still have to accept the unreliability of SW.

Reliable communications have never been cheaper, and they will get much
cheaper yet.  I think the day will soon come when SW radio won't be the
first choice for any business or government worldwide communication.

The SW spectrum will only be useful for emergency communications and radio

hobbyists.  Ideally, SW would be administrated by an agency something like
the National Park Service.  Benign neglect would also be OK.

I'm not convinced the average radio listener cares much about fidelity.
Neither AM nor FM stations normally approach their fidelity limits, but
those stations seem to be attracting listeners just fine.  Satellite's
appeal seems to be it's wide range of programming.  Digital radio might
support a larger number of channels for the terrestrial broadcasters.  I
think Clear Channel might be thinking that all those IBOC channels they plan
to install can be used as a sort of super-SCA scheme, if IBOC radio falls
flat.

George Bush's War of Choice on Iraq is a totally unnecessary war.
Every life lost, every limb lost, every disfigurement, every
disability caused there is more blood on George W. Bush's hands,
and on the hands of everyone who voted for George W. Bush.
The more you know, the less likely you were to vote for Bush.

Actually, the more one knew, the more likely they were to vote for Bush.

Statistically, Democrats are not very well educated. Go look it up 'tard boy.

I was able to get about half way through reading this and had to stop.

There are people that are of real help and there are those that are
not.

The UN and news crews are not there to help people. The UN people are
there out of self importance and living off the backs of others. The
news crews are there to record and broadcast the devastation as a way
to make a living.

Both groups should never have been allowed on military ship as their
support base. The only time either group should be on board is in
support of the ships mission not the other way around.

I downloaded and installed RecAll Pro. It has what appears to be a standard level sensing VOX switch. Unless I am missing something.

One implementation, in hardware, can be seen at: http://www.qsl.net/kc7bum/hf_squelch.html This is a very usefull device, but I am looking for a way to do it in software.

Subject:  Voice detection software?

Lou,

Voice squelches for HF are typically "syllabic squelches". They do not react on noise but on the pattern of the signal. Simple hardware based ones try to detect the presence of voice (low frequency syllabic variations associated with voice). Although not perfect, these types of squelch circuits are fairly common on commercial and military HF equipment.

Noise based squelches are practically unusable on HF as they are triggered by any random noise... and as we all know, HF-AM/SSB sure isn't FM ;-)

However, I agree that it would be an interesting project if someone

created
a software-based syllabic squelch application that can be used with any
radio... any takers? ;-)

Bruno,

At a former job we HAD to receive WWV (10 or 15MHZ).
It was winter and icy, so all I was willing to do was "toss"
a wire on our flat roof. We were in the old university gym,
with a large, flat roof. About 100'X200'. I ran the wire
lengthwise. The roof was wood, covered by several
layuers of tar, paper and gravel. The antenna worked
well enough to "get by" but the first  day the roof was clear,
I errected a better antenna, by elevating the wire on 10'
EMT sections. It was a difference like night and day.
The only change was the elevation. So, while an antenna
will work laying on the roof, it will work much better up in the
air over that roof. The electric shop was very unhappy to
have to install 2 ~60' wire to 8' ground rods.
Whne we took the antenna down 12 years later, internet
time services made WWV old hat, I scavenged the wire,
ground were and rods and the EMT and fittings. I was told to
remove that "old stuff" and "throw it away". It went into my
car. I used (and still use) the ground rods and heavy copper
ground wire,  and still have the antenna wire rolled up. I hope
to errect it after I retire and "move to the country". We bought
the good, heavy hard cooper wire and they paid big bucks to
get it there the next day.

well, there's some bull shit there!

The only objection I have to the 1103 ergonomics is the volume control. Yep, it can be a pain, but otherwise the radio is really fun to use. I never curse the 50 odd bucks I paid for it.

The 7600's ergonomics are fine, but a far cry from superb. Where's that tuning knob again?

You probably can't get a Degen repaired. You probably don't want to pay Sony to fix your 7600; they'll charge you as much as you paid for it and you'll probably have to send it back a few more times for them to do it right. I've had nothing but bad luck with Sony service. You'd feel a lot worse throwing your $150 Sony away than the $50 Degen. Anyway, both are pretty reliable.

Sony doesn't seem to want to be in the manufacturing business any more; they'd rather make the big bucks selling content.
They treat their product customers like crap, and that's not what I want to pay for!

Search up Scanner Recorder or ScanRec.

It's a freebie and works great,.

David <rickets@knac.com> wrote in
news:faoqv0lacm1h30n3bbkpraoc0qk34o2su7@4ax.com:

Perhaps my lunacy is showing, but personally I think that this is the sole reason that the U.S. Government is pushing so vehemently for BPL. Since connections to the power receptacles will allow your computer to communicate with the world, so too would the same connection allow any device, if so designed, to communicate. Your TV and clock radios will be spying on you. In theory, to a limited degree (TV's and Cable Boxes), cable ISPs would also offer this feature, but even though not everyone has cable, virtually (with the exception of the Amish), everyone has electricity.

If you have followed the debate, FEMA originally opposed BPL due to the possible interference with emergency level communications, but they later changed their mind (or had it changed for them).

BPL is an answer looking for a problem.

Soliloquy.

The 7600GR operating controls ARE superb compared to the Dingy.

>

Unfortunately for you, there are very competent independent repair avenues
for most Sony SW portables.
Even those that have been discontinued for years.

> You'd feel a lot
> worse throwing your $150 Sony away than the $50 Degen. Anyway, both are
> pretty reliable.

"Made in Japan" Sony products are very reliable.
There is no such thing as Zero defects in the manufacturing business.

>
> Sony doesn't seem to want to be in the manufacturing business any more;

I would to if I had to compete with slave labour from a communist country.

> They treat their product customers like crap,  and that's not what I want
to
> pay for!

And how does the Dingy company treat you?  Oh, you don't know, huh?
Because you can't unless you speak Chinese - LOL!

BTW:  Please name me one Chinese designed and manufactured SW radio product
by Dingy that introduced a first inovative feature?

Go ahead, contribute to the CCP coffers, then don't complain about Iraq.

Please read the thread.
I am not after a level sensing VOX,
I am after a program that only responds
to human voice.
ScanRec is a great program.
And on a FM comm system,
with decent radio squelch performs
very nicely.
But I am after a Voice Operated as
opposed to signal operated squelch.

Terry

I suppose so, although I think it's safe to do that, in many areas, the reliability is a very slowly changing function (i.e., dependent much more on something like the sunspot cycle rather than local atmospheric conditions).

The bottom line is that digital broadcasting can make SW more reliable than it is now.  True, it will never approach the 'realiability' of a local broadcaster, but presumably the typical use of SW (excluding hobbyists for a moment) is when the local broadcasts are either unavailable or considered to be too heavily influenced by the local government.

> Reliable communications have never been cheaper, and they will get much
> cheaper yet.  I think the day will soon come when SW radio won't be the
> first choice for any business or government worldwide communication.

Yes.

> The SW spectrum will only be useful for emergency communications and radio
> hobbyists.

I'd wager that the users of the HF spectrum for free e-mail services such as Winlink 2000 won't go away any time soon either. :-)

> I'm not convinced the average radio listener cares much about fidelity.

I think they care a lot about fidelity, but not how you'd typically measure it.  To the average person, static or fading is far more annoying than heavy compression artifacts (that abount on XM and Sirius) or even short dropouts.

> Satellite's

"The Degen is made in China by a Communist Party owned factor=ADy.
The 7600GR is made in Japan by a free enterprise company."

What possible significance is there to one radio being made in China vs
one made in Japan.  The Japanese must be concerned about the quality
and pricing of chinese goods because they are dropping out of the
shortwave market and are outsourcing more of their production in China.
And, just so that we fully understand what you mean please tell us what
a free enterprise company is.

Hi Telamon,

"Telamon" <telamon_spamshield@pacbell.net.is.invalid> wrote in message
news:telamon_spamshield-FB353F.12561630012005@newssvr13-ext.news.prodigy.com...
> I have not seen a poll of SW listeners who have compared DRM to analog.
> What poll are you referring too?

I don't.  I said, 'I bet...' but that doesn't imply I actually have any proof. :-)  It's just my opinion.

> The majority of the SW broadcasters are not for profit national arm of
> their respective governments so this has nothing to do with private
> companies or the profits they make.

Fair point.  Still, in -- most -- countries the government respects the will of the people to some reasonable degree, and as such the broadcast content will change similarly.

> If you take a careful look of the DRM system, you will understand that
> the first order benefit is a reduction in electrical costs to the
> broadcaster.

I'm thinking that the same effective range can be achieved for less power, OR one can keep the same (average) output power and increase their range a skosh.

> This transmission mode is not supposed to require as much power as analog for good reception. The result will be lower signal levels at the listeners radio. This will make the transmission more difficult to decode with good quality.

It's a digital mode with plenty of error correct, so the quality of reception will fall off VERY rapidly with a dropping signal to noise ratio. Again, for the _same_ power, DRM will provide _better_ reception quality for the listener.

> The big picture is even worse when you consider that the listeners radio must now be more complex

Yes, although it all gets boiled down into an IC or two these days anyway.

> require more power to operate.

Not at all necessarily.  As I mentioned last time, the processing requirements are not so great that it isn't reasonable to figure that --after a couple of generations of receiver chipsets-- the decoding power requirements will be negligible compared to speaker amplifier requirements, so the power 'issue' then only becomes a potential problem for Walkman-style radios.

(BTW, satellite radio in the US -- XM and Sirius -- are on about generation #3 of receiver chipsets now, and they've just started introducing would-be Walkman-style radios.  They're not much to write home about yet, but give'em another year or two and I think they'll have it.)

> New radio
> receivers will cost more

Not necessarily.  Digital processing is a lot cheaper to implement than analog processing -- besides performance, there's a cost reason that good car stereos now digitize at IF and 'do the rest' digitally, and cell phones have always tried to push the digital processing as close to the antenna as possible.

> and will cost more to operate.

Only if they use more power...

> Almost all the
> existing radios from the beginning of SW broadcasting to now will be
> obsolete and the rest converted at no small cost.

Yes, although it's not like that's going to happen overnight.  In the USA, HDTV is taking decades to surplant the old NTSC system, and the same is surely going to be true of digital radio broadcasts (although perhaps not _quite_ as long, as radios cost a lot less than TVs to replace).

> The listener will not benefit in any way over analog if the broadcast power is reduced so that the broadcaster will be able to derive the only real benefit of the DRM system. The signal that could have been clearer and free from interference will degrade and instead of being noisy on an analog receiver will cut in and out on a digital unit.

If the broadcasters choose to cut their power, that's a possibility.  But I don't see why the broadcasters would tend to do that?

> Under any but the ideal conditions of very good signal to noise the DRM receiver will cut in and out. This behavior is much worse to most individuals than the analog fading on current receivers so this is just an example of different tradeoffs in the system design instead of DRM being a better system.

Digital transmissions finally cut out well after an analog transmission is completely undecipherable.  I think most people prefer brief 'cut outs' to, e.g., fading and static crashes, but I suppose that's largely a matter of personal preference and I don't have a very large sample size.

> I could go on and on about the pros and cons of DRM to analog but the end result is no better or actually worse for the listener.

OK. :-)  I guess we'll see how it plays out... you tend to make certain assumptions about broadcasters' and listeners' behaviors that are different from mine.

[a bunch of somewhat repetitious stuff deleted, not that I think it's invalid, but rather I don't have the time to address it right now]

> All that said the thing that ticks me off about the DRM consortium is that they lie about the system. The claim that the encoding, decoding system is open is as false as the real benefit will turn out to be if DRM is implemented as envisioned.

I'd agree with you there.  Unfortunately the same thing has happened on the amateur radio bands -- digital modes such as Pactor III just barely squeek by the FCC definition of being 'documented,' yet trying to implementing the decoding/encoding algorithms onesself is nigh impossible.

Where does this particular model fall into the scheme of things?  Today I picked one up at my local flea mkt for $25.  It works but all switches and knobs are extremely scratchy.  Needs some TLC and is missing the AM/SSB knob but works otherwise.  Also picked up a Drake SSR-1 in XLNT condition that works amazingly well.  The guy wanted $30 but I talked him down to $20.  He thought it was a CB radio. LOL  For an analog readout, this Drake is spot on.  I have lots of other boatanchors and have never seen one with such accuracy.  With the way it tunes, I suspect that it is a "Wadley loop" type radio.  BTW, I thought Drakes were made in Ohio.  This SSR-1 has "Japan" stamped in the metal case...

I came in late on this--
Would you repost the links for the 365 pf air caps?
Any "links" for cat whiskers also (Germanium Xtals)
Thanks---
Ron

I did not want this thread to be overly long but it is getting there. I
think that most of your replies are assumptions on the progress of
silicon being generated specifically for DRM receivers and that is going
to cost money. Even with the Asicss for the horse power to all the work
in a DRM receiver it seems likely to me that it will require more power
than an analog set. It is not reasonable to assume otherwise.

The DRM consortium is not playing straight with the public and this
makes any claims suspect in my eyes, certainly the ones that imply
slight of hand techniques like the power reduction on the broadcaster
side and at the same time maintain that reception will be better. I do
not believe it. I will need proof and so far, it is not forth coming.

It's good to see that you have finally decided to do it right.

The wire's measured impedance at the opperating frequency was about 100
ohms. 10 watts at 100 ohms gives less than half an amp. I wouldn't be to
concerned on an asphalt roof.

And so you're promoting Communism?

<hjsjms@cs.com> wrote in message
news:1107137412.899418.181950@z14g2000cwz.googlegroups.com...
"The Degen is made in China by a Communist Party owned factor�y.
The 7600GR is made in Japan by a free enterprise company."

What possible significance is there to one radio being made in China vs
one made in Japan.  The Japanese must be concerned about the quality
and pricing of chinese goods because they are dropping out of the
shortwave market and are outsourcing more of their production in China.
And, just so that we fully understand what you mean please tell us what
a free enterprise company is.

I started thinking about this tonight. I was tuning around with a Lowe HF-150, comparing it with some other receivers, and was struck by how quiet the 150 is--and by what an advantage this is when it comes to resolving weak AM signals.

So, just out of curiosity, what's the quietest receiver you've used and/or owned?

Hi all,

Can anyone recommend a person or service center in the US that can repair/align a Sony ICF-2001/2010 that is aging?  I have visited the Sony site and they have nothing there that even refers to it, so I doubt they'll be much help.

It's almost 10 years old, bought in Hong Kong way back when.

I'd really appreciate any help!

Thanks

ASA Lives!

the DX-394 is very quiet yet pretty sensitive. after I have modded one it is
a very nice receiver !

I too like my 150, but the current receiver I am building- loosley based on
a W7ZOI design is quieter, probably due to the gain distribution and the
fact that Wes designed the AGC such that it does not kick in until
about -90dBmV; unlike some of today's radios where you can actually see band
noise on the S meter.
Still under construction, with a 1980's theme:
http://www.parelectronics.com/pics/w7zoi9.jpg

The AM detector is an NE602 used in a squaring circuit - wonderful A.M.
recovery.

Too bad we wasted 250B and 1400 lives for Iraq freedom. What a cluster F. And for what? To avenge 3000 deaths in NY? We lose more than that from smoking every month and car accidents. The terrorists have won it all. Everything's about terror. Can't ride my bike next to the military base after 9/11 - trails closed - too risky. Can't bring my scissors on a plane - too risky. Have to stand in long lines all over the damn place - EVEN a damn minor league hockey game - a church, and museums for the sake of security. I have to take my damn shoes off and get my socks inspected at a damn tractor pull! My God. They've won it all. We're cowards. I say fcuk 'em. The other day some dude parked his truck on the tracks and killed a bunch of people. Do you think the article in the paper talked about it being some sick dude or a real tragedy or something like that? No - they said it highlights the vulnerability of trains to terrorist attacks!

What a sick bunch of scared pukers!  What kind of sick journalist thinks like that?  The terrorists have us right between their towelheaded balls - we're scared and running.   We're eating, breathing and shitting terror all day long.   It's all about them  - not us.   And now - we're breedin them terrorists like rabbits in Iraq.  Yea - we've got ourselves in one big damn mess and my towns lost a couple of our guys/gals.  We handed it all to the towelheads. And all for Republican pride and patriotism.   Well I'm here to tell ya - Iraq ain't God's work and it's about as far from patriotic as kosher food is from pork rinds.   flip

Ignoramus.

--
 George Bush's War of Choice on Iraq is a totally unnecessary war.
  Every life lost, every limb lost, every disfigurement, every
 disability caused there is more blood on George W. Bush's hands,
   and on the hands of everyone who voted for George W. Bush.
 The more you know, the less likely you were to vote for Bush.

A church where you *HAVE* to make reservations just to attend, can't just walk in....And a preacher who has guards to intercept a handshake (just in case there's a summons or legal papers hidden)....Who scammed people for money to do one thing (on the air) and then did something else with that money....Sorry, I just can't be sorry for him.....He was good for a laugh years ago, even went to see him in Oakland once (in the basement of a church) and was *searched* before I could enter (we're talking 25 years or so ago). Man he was/is *paranoid*.

Let's face it, he IS a huckster......and a successful one at that. But I won't morn him.

Hi Greg.

Do you have metal screens on your window?
My wife and I lived in a condo with antenna restrictions.
So I used a piece of hook up wire to the window screen.
I love it, antenna right in their face and they did not know.
Worked great @ 7mhz  my favorite band.
PEACE
Dana

Preposterous! Mister Gates is a man of honour and will do what he said. He's taking ME to Disneyland right after he helps out the Easter Bunny with the Egg deliveries and makes Windows secure.

Received a Radio Taiwan International "Night Market in Keelung" QSL card for a broadcast on 11 December 2004 on 9610 KHz, 0800-0900 UTC in English beamed to Australia and New Zealand. SINPO 44444. Received in 6 weeks via air for a postal mail report. Also received a copy of "Taiwan Journal", Programme and Transmission schedule and a very nice looking unused First Day cover and stamp featuring the "Inauguration of the Eleventh President and Vice President". No Reply Postage required.

Receiver: Winradio WR-1000i.
Antenna: VHF/UHF discone about 6 metres above ground level.

Station Address

Radio Taiwan International

David wrote:

> Big Brother would like each home to have broadband.

Yes. The TCP-IP business makes tracing all your communications much easier. Your fingerprint is on everything coming and going. With shortwave, they don't know who the listeners are. Only troublemakers listen to shortwave, right? Eliminate the medium by effectively jamming it via 'inadvertant' interference.

There is a major problem with powerline transmission anyway. If the lines go down, you lose more than the power. With people increasing using telephones over the net (easily traceable/monitored via the packets with NO court decree needed) they will lose that too.

Too many eggs in one very public basket.

mike

>

Democracy doesn't exclude any Party.
What it excludes is their ability to hijack a political process by giving
the
People the power to vote them out.

That is something NO existing Communist Party presently in control of
countries like China and N.Korea could survive.  That is why the Communist
Party strongly oppose democracy.

If a country like Iraq can successfully pull off any resemblance of a
democratic election

it sends an extremely strong signal  to Communist nations such as China.

I can read the minds of the populace in China right now upon hearing the
election news
in Iraq - "If Iraq can do it why not us?"

What is so hypocritical of the Democrats is that Bush lost by far smaller
margins
than Kerry in states such as Wisconsin and, I believe, Washington as well as
a couple other
states.

Be careful what you ask for, should be the Democratic Party mantra in
regards to disputed
Kerry votes.

> Can anyone tell me the differences, opinions... between that receivers
> (Degen DE1103 and Sony ICF-SW7600GR)?

The Degen is made in China by a Communist Party owned factory.
The 7600GR is made in Japan by a free enterprise company.

The Degen ergonomics S.u.c.k.s. which will make you curse every penny you spent on it every time you attempt to operate it.
The 7600GR ergonomics are superb.

Repairs or replacement parts are non-existent for the Degen.
Sony parts and repair and relatively easy to acquire.

A technical manual does not exist for the Degen
Sony technical manuals are easily obtained.

If the Degen breaks toss it in the trash. Spend more money for another receiver.
The Sony 7600GR is relatively well built and is repairable.  But is less likely to need repair.

You get what you pay for!

I was left here wondering why they'd hold a memorial service for the Kursk in July anyway. It did go down in August of that year as I recall.

The best bang for your buck with this radio is to buy a dozen and
then send them all to "anybody" in North Korea.

I would like to add that I have the greatest respect for those who leave their
homes and go down to sea as many have done in the past. I have even greater
respect for those who leave their homes and actually go under the sea.

May those who perished onboard RNS Kursk always rest in peace.

maybe this will help

base unit one farad
millifarad = 1/1000 farad  or a thousands of a farad (seldom used for capacitors)
microfarad = 1/1,000,000 farad  or a millionth of a farad

unfortunate the mixup of the prefixs "m"

In some measurements such as current
.001 amp is expressed as one mA   m meaning milli
.000001 amp is expressed as one uA  u meaning micro

So back to your original question -  you need to ascertain the use of  m
A 50,000 millifarad is a whopping capacitor and not likely
So it was probably 50,000 microfarads

Hope that helps

--
Caveat Lector

Its a very primitive dialect jd and no translation is possible. Thank God
```

these primates have limited reproduction because of their habit of dragging
their women by the legs causing them to fill up with dirt and thus blocking
the reproductive organs.

I have several problems with what you posted.

I have not seen a poll of SW listeners who have compared DRM to analog.
What poll are you referring too?

The majority of the SW broadcasters are not for profit national arm of
their respective governments so this has nothing to do with private
companies or the profits they make.

--------------------------------

If you take a careful look of the DRM system, you will understand that
the first order benefit is a reduction in electrical costs to the
broadcaster. Like any anything though there is a down side even to this
main and as far as I can tell only real benefit to either broadcaster or
listener and that is that the broadcaster must then transmit at lower
power. This transmission mode is not supposed to require as much power
as analog for good reception. The result will be lower signal levels at
the listeners radio. This will make the transmission more difficult to
decode with good quality.

The big picture is even worse when you consider that the listeners radio
must now be more complex and require more power to operate. New radio
receivers will cost more and will cost more to operate. Almost all the
existing radios from the beginning of SW broadcasting to now will be
obsolete and the rest converted at no small cost.

The listener will not benefit in any way over analog if the broadcast power is reduced so that the broadcaster will be able to derive the only real benefit of the DRM system. The signal that could have been clearer and free from interference will degrade and instead of being noisy on an analog receiver will cut in and out on a digital unit.

Under any but the ideal conditions of very good signal to noise the DRM receiver will cut in and out. This behavior is much worse to most individuals than the analog fading on current receivers so this is just an example of different tradeoffs in the system design instead of DRM being a better system.

I could go on and on about the pros and cons of DRM to analog but the end result is no better or actually worse for the listener.

The listener will likely have to replace their current radio. The new radios will cost more money than the current radio. The current or new listener will have to spend more money for a radio and spend more money to operate it because it will consume more power. The listening situation will be different from analog where some aspects will be an improvement at the cost of different set of downsides. The net result will not be better then analog just different.

The broadcaster still has to buy the same size transmitters because the DRM system requires tremendous overhead capacity so that cost does not change. The transmitter modulation subsystem is more complex and a little more costly than analog. The engineering costs are a little greater because keeping all the transmitter parameters within very tight limits so it does not splatter across the band is more difficult to maintain then analog. The broadcaster has to transmit a weaker signal to reap the one real benefit of the DRM system where the listeners antenna and radio will have to deal with that weaker signal.

------------------------

All that said the thing that ticks me off about the DRM consortium is that they lie about the system. The claim that the encoding, decoding system is open is as false as the real benefit will turn out to be if DRM is implemented as envisioned.

By VOX I mean software that will only trip when a human voice
is recieved. I have a hardware unit, but software would be
a lot more usefull.

```

It looks like everyone on this thread has top posted so I will just so it continues to make sense. I did fix some of the broken formatting.

There is no problem laying the wire on the roof as long as it not near any significantly long conductors. The impedance of the wire will be a little lower than if it was hanging in mid air. The impedance of the wire will drop much lower if it and the roof are wet, which will not present a problem for receiving.

I would not use this as a transmitting antenna. It is a worse situation when the roof is wet but even dry you are heating your roof with the RF energy and this could start a fire if enough power is used.

> > Jack
>
> I've never tried ground radials but it's worth a try. Would you still run a short ground wire too?

If a ground wire is not short it will not behave as if it is connected to ground period.

The problem is that a wire has inductance. The value of inductance is based on the diameter of the wire or cross sectional area for other shapes over its length. The smaller the cross sectional area is or the longer the wire the is the higher the inductance of that wire.

The inductance of the wire will become a greater problem at higher frequencies and less of a problem the lower in frequency you want to operate on because the reactance of the wire always increases with frequency.

Since you want the wire to behave as a ground connection you have to calculate its self inductance and then its inductive reactance at the highest frequency you want it to behave as a ground connection.

If you don't want to calculate it then make it as short as practical. If the connection turns out to be more than a few inches in length then use three inch minimum width copper tape instead of wire.

I didn't say that. I sure hope it's not true, but I think it probably is. I'm just sick of "news" being spread around without people looking into it beforehand, and with every blurb written that makes "the other guy" look bad being accepted at face value. That goes for both sides of the aisle. Saying "spread it around" and -then- essentially saying "I wonder if it's true" is the kind of mentality that makes sites like scopes.com a necessity. That might not be quite what tianli meant, and I'm not trying to bust his chops here...just making a point. Look at all of the off-topic articles that are quoted in their entirety here, and then ask yourselves how much fewer of them we'd see if they were either vetted for accuracy or weren't simply opinion pieces. I'm admittedly over-sensitive about it today; in a related vein, I've got relatives that lately insist on sending me every freaking internet e-mail rumor in existence, despite all of my (to this point) polite efforts to get them to stop and think before they spam everyone in their address book with them. Believe it or not, there are still people out there that believe Bill Gates will send you to Disneyland if you help him track how e-mail spreads. <sigh>

sorry Terry.. i'm in western PA. about 20 miles
east of pittsburgh. second highest point on this
end of the state. i try to keep a rx on 6925 when
i'm home on the weekends. never know when a pirate
will pop up. always get a kick out of them, but i'm
not as lucky as some of the posters here. AND- i
always try to post a pirate as soon as i hear it, like
to give others a chance to catch it...
Drifter...

Hi Terry,

VOX is a key feature of RecAll Pro (and the standard RecAll program) =
found at www.sagebrush.com  The software allows for various =
configuration options of VOX, too.

It's an excellent, easy to use program that's very useful for scanner =
enthusiasts, DXers, and the like. In fact, RecAll Pro is the basis of my =
hard drive recording techniques article in February's Monitoring Times =
magazine.=20

I don't mention the VOX feature in my article, but other capabilities =
are discussed. I particularly like the running time/date stamp in RecAll =
Pro that allows it to be set to UTC.

Guy Atkins

I am very pleased with my 1103. I have owned three different 7600gr radios and I just wasn't impressed. The 1103 has a much better sounding speaker. Plus, the 1103 has a tuning knob but it still maintains the advantages of being a digital radio.

To me, I have arranged the memories on 1103 in sequential order: MW to SW to FM. When I need to access a particular frequency, I just give knob a spin or two and I'm there. I've never found a reason to access any memory directly, so it really doesn't matter to me if a memory is named 1c or 23.

A previous poster claimed that "the memory retrieval feature has a serious bug when used on FM and MW. When a stored channel is retrieved from FM, the firmware also retrieves the highest numbered memory used for MW."

That's not quite right on my 1103 anyway. What I have observed is that the radio remembers the last frequency tuned on each of its 12 bands. That means that when you switch from one band to the other, the radio tunes to the last station you listened to on that particular band. To me, that's a pretty nice feature.

Don't get me wrong. I don't think the 1103 is the best radio made. I have others that I like better, depending upon my mood. But for my needs and tastes, the 1103 comes closer to perfection than did the 7600gr.

I'm in agreement with these comments. My 1103 has very impressive performance for the price. It's the only portable I've ever used that could pull in CHU 3.330 MHz on the whip antenna alone, indoors, from here on the West Coast of the US. It's also delivered a handful of the 90 and 60 meterband Indonesians on the whip alone.

The Degen DE1103 Yahoo Group has lots of messages and information about this portable to help you make an informed choice.

For the money the DE1103 gives good performance.  Within major broadcast bands it delivers many signals and the dual filter helps in some situations. And is does a good job of retrieving hams signals too. It is quite compact and the ergonomics are good although not at the 7600 level. The tuning knob is a distinct plus for a radio in this price range and makes band scanning fun.

There are a few shortcomings you should be aware of.
1.  Ihe receiver generates numerous image signals 900khz down.  Thus much of the 6mhz band is repeated in an area where there are potentially some interesting nonbroadcast catches.  Same goes for the 9mhz band generating images in the interesting 8.8 segment where international aircraft may be heard.

2.  The usefuless of the 255 memories in the 1103 are compromised in 2
ways.  A. Degen decided to use hexadecimal numbering for it's memories.
While confusing to many, this scheme also means the keypad is useful
for only certain groups within the 255 memories.  B. The memory
retreival feature has a serious bug when used on FM and MW.  When a
stored channel is retreived from FM, the firmware also retrives the
highest numbered memory used for MW.  Likewise for retrieving MW
stations.  For those of us who flip between bands it means having to
continuall retune the other band.
3.  The signal strength meter for some reason does not work on FM as it
does on virtually every other multiband radio I'm aware of.

I've owned one for about a month now and do enjoy it.  It is not
perfect nor is it a replacement for the 7600 or the YB as some have
claimed.

Wrong. Bush supporters appeared to live in an alternative universe.

Friday, October 22, 2004
Bush supporters are wildly misinformed.

� 75% believe Iraq was providing substantial support to al Qaeda.

� 74% believe Bush favors including labor and environmental standards in agreements on trade.

� 72% believe Iraq had WMD or a program to develop them.

� 72% believe Bush supports the treaty banning landmines.

� 69% believe Bush supports the Comprehensive Test Ban Treaty.

� 61% believe if Bush knew there were no WMD he would not have gone to war.

� 60% believe most experts believe Iraq was providing substantial support to al Qaeda.

� 58% believe the Duelfer report concluded that Iraq had either WMD or a major program to develop them.

� 57% believe that the majority of people in the world would prefer to see Bush reelected.

� 56% believe most experts think Iraq had WMD.

� 55% believe the 9/11 report concluded Iraq was providing substantial support to al Qaeda.

� 51% believe Bush supports the Kyoto treaty.

� 20% believe Iraq was directly involved in 9/11.

The basic principles of progressivism are:

Social safety net
Those that work hard and play by the rules should receive a decent
standard of living, as well as freedom, security, and opportunity.
Democracy
Minimize concentrations of political, corporate, and media power so
that individuals have a stronger voice in their government. Publicly
finance elections to reduce the influence of wealth in the political
process. Improve public education, especially in civics and history so
that more citizens can take part in the political process. Bring
corporations under stakeholder control, not just stockholder control.
Larger role for government
Government provides public services that the private sector cannot or
is not doing effectively, or ethically. Government should promote and,
if possible, provide greater democracy, more freedom, a better
environment, broader prosperity, better health, greater fulfillment in
life, less violence, and the building and maintaining of public
infrastructure.
Ethical business sector
In the course of making money by providing products and services,
businesses should not adversely affect the public good, as defined by
the above values.

Foreign policy
The same values governing domestic policy should apply to foreign policy whenever possible.

Typical elitist, snobbish liberal take on anyone they disagree with.
"They don't agree with me because they are to stupid to understand
complex ideas."

Typical fare from Tom Betz, the talking ass of RRS.
----------------------
Hope is not a part of the Air America broadcasts.

Freedom means marching backward according to Air America.

Whether or not one agrees with the point of view expressed it was not
entertaining. Air america has sucked every time I tuned them in. Lame
humor and a rehash of tired, unrealistic, unworkable liberal ideas is
not entertaining in my view.

How on Earth does calling the United States ''my country'' mean that
I'm a ''liberal elitist''?

I do own it. As much as anyone else.

```

You have been brainwashed since childhood by corporate mindfuckers
into doing their bidding.  You have sold the country out.

There is nothing the least bit patriotic about defending megapirates
as they rob us blind, and it is quite patriotic to point out that we
are being robbed and lied to.

You wouldn't know a real conservative if you tripped over one.

Progressive is a term used by people of the liberal persuasion to
re-qualify unrealistic, unworkable and just plain dumb ideas as
something other than what they are.

After he bought it he must have eaten it. This might explain some of his
posts.

That's not what I see in most articles or catalogs.
1 F    is 1 farad
1 mF is .001 or 1x10^ -3  or 1 milli-farad
1 uF  is .000,001 or 1 x 10^ -6  or 1 micro-farad
1 nF  is .000,000,001 or 1 x 10^ -9  or 1 nano-farad
1 pF  is .000,000,000,001 or 1 x 10^ -12 or 1 pico-farad

Many capacitors are in mF in industrial power supplies. Got to get the
current step response down to < 20 Hz in some cases.

I have no respect for someone who spent his life scamming other people
out of their money by perverting the bible and other sources of
information.

"tianli" <look@china.org> wrote in
news:10vqecnh00fe74d@corp.supernews.com:

Personally, it was the choice between tweedle dee and tweedle dumb. What concerns me is that the possibility of actually having a decent candidate from either party making it to the primary is nil to none. All of the future elections will assuredly be determined years before the election.

I had to return some defective software recently, and I wrote to the company explaining my situation. They said to return it, and the would replace the defective disk, free of charge. Months later, I still hadn't received the replacement disk, I again wrote to them. They said that they had no record of receiving the disk and asked for my proof that I had mailed it to them.

I copied verbatim their instructions to me concerning returning the disk, and I e-mailed them again. No where in their instructions did they specify that I should obtain a receipt for the return mail. I also informed them that I had bought a couple of hundred dollars worth of software from them, as well as cables and the like. I also told them that I had to send multiple e-mails to them to get them even to respond. I added that the disk was defective (the drive spent 15 minutes reading and re-reading the disk, but it finally loaded), but that I had successfully loaded the program onto my system.

I went on to explain that I had a functioning program, was a good customer, had written multiple times about my problem, and that it wasn't part of a vast Right Wing conspiracy to obtain a disk from them that their records would clearly show that I already had. When they finally sent the replacement disk, the paperwork was initialed for every step of processing by a supervisor, to show that the disk was being sent without cost.

What is my fucking point, you are no doubt asking? My point is that we are being asked to vote by electronic methods using a system that gives no receipts. If a lousy $35 dollar disk caused so much problem for the lack of a receipt, why should something as serious as voting be done by a method that precludes serious challanges to the results. Bush received 3000 votes more (in Ohio) than Kerry in an area where only 800 people voted. When discovered, they said that the machine should have read 300 votes for Bush, not 3000, and corrected the, ahem, mistake. How many areas did this happen that no one noticed the discrepency?

Don't get me wrong, I work in heavy industry, and I tire of the Democratic mantra at election time of "vote early and vote often". Elections have been rigged before, but it would be nice to see the Citizens actually determine the results for a change. But people cannot make educated choices when we are spoon fed by the media.

................etc,

Soliloquy

I would say this whole idea has been sold by people more interested in
getting the money of ignorant investors that building a workable system. BPL
will likely die shortly after implemenation if it ever gets off the grond at
all. The cost is just to high for it to be viable.

Maybe some good news - I hear that BPL is showing up as
blips on radars.

A better radio will just allow you to here the interference better. An
external antenna, well away from the house, fed to the radio via shielded
transmission line would help.

Hlp pls. 1520-1648, Jan 29
Male presenter in vernacular (pakistani dialect) ID at 1558 clearly
says  Pakistan with sig 45444.  id at 1600 too fast to follow but
sounds like "Radio Aka ...(several words)... followed by female
presenter Several ID's by 1632 and still words too fast, Radio
Aka....or Ara .... Signal fades into bkgnd by 1648.

Really confused by one ID in vernacular near end out pops the words".
"P.O. Box 5077".
They have post office boxes in Pakistan?

ILG, WOR, CunbreDx, hard-core dx, etc., no clue at this freq.

I gotta set up my laptop to record.

thnx...jimg

>From the DRM website:

The DRM on-air system will propel the AM broadcasting bands below 30 MHz - short-wave, medium-wave and long-wave - to the next level.

DRM is the only universal, non-proprietary digital AM radio system with near-FM quality sound available to markets worldwide.

The quality of DRM audio is excellent, and the improvement upon analogue AM is immediately noticeable. DRM can be used for a range of audio content, including multi-lingual speech and music.

Besides providing near-FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receivers to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcast band plan, based on signals of 9 kHz or10kHz bandwidth. It has modes requiring as little as 4.5kHz or 5kHz bandwidth, plus modes that can take advantage of wider bandwidths, such as 18 or 20kHz.

Many existing AM transmitters can be easily modified to carry DRM signals.

DRM applications will include fixed and portable radios, car receivers, software receivers and PDAs. Several early prototype DRM receivers have been produced, including a software receiver. The DRM system uses a type of transmission called COFDM (Coded Orthogonal Frequency Division Multiplex). This means that all the data, produced from the digitally encoded audio and associated data signals, is shared out for transmission across a large number of closely spaced carriers. All of these carriers are contained within the allotted transmission channel. The DRM system is designed so that the number of carriers can be varied, depending on factors such as the allotted channel bandwidth and degree of robustness required.

The DRM system can use three different types of audio coding, depending on broadcasters' preferences. MPEG4 AAC audio coding, augmented by SBR bandwidth extension, is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

The robustness of the DRM signal can be chosen to match different propagation conditions.

Hi OM,

BPL suffers the same problem: "The Last Mile."  However, in rural America it is not 1000 customers in the last mile, it is the 3 customers in the last 10 miles.

BPL has all the smoke and mirror investment potential as a new
millennium dot.com.  WiMax will bury this fizzling comedy.

For a disparaging view of WiMax:
http://www.eweek.com/article2/0,1759,1668327,00.asp?kc=EWYH104039TX1B0000665
It is obvious that even the most restrained and pulled back design
wins hands down over BPL for BPL's proposed customer base.

I would only disagree with the assessment of Buchanan.

As for New Orleans becoming "Venice," the entire landmass south of Lake Pontchartrain including the New Orleans metro area has been sinking for decades -- possibly centuries.  Oddly enough, the other side of the lake is actually rising at the same rate.

It's a geological phenomena -- nothing from "global warming."  However, chances are that it will be a severe weather event that finally overwhelms the levee system in southern Louisiana and causes catastrophic flooding.

Presumably, it's a pun on John Coltrane's "A Love Supreme".

Sounds to me like you were hearing FEBA Radio directed to Afghanistan, in various languages. They might most likely be mentioning Pakistan during the broadcast or during the news. I'm not sure about the P.O. Box 5077 though.

It would help also if you gave a geographical region you are listening from.

I also find a listing for IBRA Radio around that time, same frequency, also directed to Afghanistan out of Russia.

So chances are it is either FEBA or IBRA. There may be some confusion as to who is actually scheduled there.

I did see it listed too as IBRA, but that may have been in error. If I recall, FEBA is more of a 'soft sell' regarding matters religious.

If you heard an interval signal, you might want to check on this page:

http://www.intervalsignals.net/

Not sure exactly which country FEBA might be listed under, so you might have to poke around a bit.

I heard this story on the radio today and I think this tragedy happened recently.

Bad guys robbing two couples. One lady interrupts robbers, saying "Leave us alone"
Bad guys say "Shut the hell up and give us your money"
Lady says "What you going to do shoot me?"
Boom

Note to self, when being robbed by angry robbers don't be an ass.

Scott's life's work was to enrich himself and live well. He certainly was a success at that. The theology he preached (if "preached" is the right word for the jokey riffing he performed) was weird to say the least and was often offensive to me, and I'm under no obligation to take it seriously, or respect him for it.

The media is the issue of the holocaust.

Where were they in 1939?

Why did the German people allow this to happen?

Yesterday I spotted an atomic clock at the Rite-Aid Drugstore chain. It's $9.95, and although it doesn't specifically say "atomic" or "atomic clock" on the package, it's certainly one. It's described as an "automatic setting" clock, never needing manual setting, and has a switch for various USA timezones on the back. I believe the manufacturer was listed as "Elite Group", if I recall.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to
you so that you will not sin. But if anybody does sin,
we have one who speaks to the Father in our defense
Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you
saved.

Please tell your family and friends, thanks!

Have a great day!

Ah, but the liberal fashion police will certainly have something to say about
it!

But I'd rather have them bitching about what the Vice President wears than actually trying to run anything any old day.

I did get a big kick out of the 'tard boy David trying to say that there were 'sub zero' temperatures in Washington on the day of the inauguration.

'Tard boy liberals never check their facts, they typically just run with whatever suits their agenda.

Yesterday I spotted an atomic clock at the Rite-Aid Drugstore chain. It's $9.95, and although it doesn't specifically say "atomic" or "atomic clock" on the package, it's certainly one. It's described as an "automatic setting" clock, never needing manual setting, and has a switch for various USA timezones on the back. I believe the manufacturer was listed as "Elite Group", if I recall.

Why laugh at them,instead buy a few items cheap and sell them to the idiots
yourself!!! Do what the sellers do on ebay.If they are stupid enough not to
price cheak locally before bidding then they deserve it lol

I agree completly John. I use to always price cheak locally before buying at
a little place in Carson City NV. Oh yea! It's spelled cheek. :)

B.H.

"Lucky" <Lucky@TheBotStopsHere.com> wrote in
news:10vmk0lgdntbi41@corp.supernews.com:

I downloaded it and am using it on and off. It's a little buggy. It crashed my system and I had to ctrl/alt/del the system to shut the process down. It also generated an "Exception Error" once, when I was attempting to use the tune up/down arrows below the tuning knob.

The crash happened when I was tuning the radio by hand despite being connected to operate via the program. Since then, I have ceased changing the radio settings while the program had control, I have had no more problems.

I wasn't expecting the ability to control the volume of the radio speaker from the program, a nice feature of this software. It can give you the impression that something is wrong with your radio when you realize that the radio volume knob is turned up, but no sound ensues. It took me a little longer than usual to get used to the program's features, but they look impressive.

I especially like the ability to "sound process" the signal that is sent to the PC speakers. This necessitates turning the volume down on the radio, since there is a slight delay between the radio speaker sound and the PC sound.

I did a post earlier in this group concerning a numbers station. I found it while controling the radio with this program, using the scan function, and was also impressed with the sound processor clearing up the signal.

Overall, very nice.

Thanks.

Excerpt from article: "The Texas state troopers were in B.C. as part of
an exchange program with the RCMP to spot and stop drug traffickers.
Called Pipeline Convoy, the program involves training officers to detect
people who are lying or trying to hide things from police, said RCMP Sgt.
John Ward."

Odd thing is, even more than the need to detect lying citizens, we need a
method to detect and hold liable lying police officers and politicians.

This is what America has become:

"Woman Considers Fighting Candy Bar Arrest. Washington (AP) - A woman who was handcuffed and jailed for eating a candy bar on a subway station escalator got her day in court Thursday, but didn't get much satisfaction.

Stephanie Willett was eating a Pay Day bar on an escalator in the Metro Center station on July 16, and received a warning from Metro Transit Police Officer C. Curry Hagler not to eat on transit system property. She stuffed the last bit of the bar into her mouth as she approached the turnstile.

After receiving a second verbal warning from another police officer, Willett said Hagler warned her she would be arrested if she continued eating. When she responded by telling Hagler she should "go looking for real crime," she was detained, searched, handcuffed and arrested on a charge of eating on a public transportation conveyance. After spending three hours in the District of Columbia Jail, Willett paid $10 to be released and waited for her court date."

http://www.news8.net/news/stories/1004/178462.html

She was no longer carrying the candy bar, simply chewing the remainder of what she alreay had. They honestly expected her to "spit out" the remaining candy, so as to be in compliance with the law. When she was further challanged, she said that they should "go looking for real crime." They arrested her for finishing a candy bar. These same transit police also cited a wheelchair bound boy that suffered from Cerebral Palsy for swearing when he was unable to find a working elevator to allow him to leave the subway station.

Do you think that any of these zealous officers ever speed, or park illegally, or make illegal turns on red, or cheat on their taxes, etc. We have no way to rein in their illegal activities, yet they can make everyone else a criminal by zealously enforcing even the slightest infraction of the law.

Your tax dollars at work. We haven't even seen the tip of the iceberg yet.

Soliloquy.

I bought a scientific hand held calculator at a wal fart store about seven years ago.I still haven't read the owners manual yet.I bought a Philips Automaic Audio/Video Selector With RF Modulator model PH6113 gadget for about $25.00 at a local wal fart store this afternoon.I have no idea of when I might  get around to hooking it up to that tv set I use for my DirecTV so I can hook up my so called "free" VHS/DVD cheap ass Apex player gadget that DirecTV company sent me a few weeks ago and somehow,I don't care either.What do I want to do? watch Girls Gone Wild?

Maybe you would care to explain how you inferred from my comments about
good radios being made in China that I'm promoting communism.  While
you are at it be sure to note which kind.

Moqtada Al-Sadr bribed by US on election day

This doesn't seem to have been reported anywhere else, but Geraldo Rivera mentioned something interesting late last night on the Fox News Channel overnight marathon coverage of the Iraqi "elections." Rivera said that Moqtada al-Sadr had been bribed, paid off, so that he would keep his forces from blowing stuff up during the voting.

Al-Sadr is the grand-mufti-type Shiite cleric who rules over a large, allegedly slummy, area of Baghdad known as "Sadr city."

Your tax dollars at work.

I spent over a year looking for a Europa.  The only one I found was at a dealer
in the Netherlands, but they wouldn't export to the USA.

While you could use a penlight, the back light is a convenience - less stuff to
keep track of.

I'm just get a bug for a radio and end up buying it even though I have a
bunch of radios already. I got a bug for the 150 and that's it. I hear about
everyone loving it and that it's built like tank. Plus it being manufactured
in England draws my attention too.

Lucky

wavelength sez:

"This doesn't seem to have been reported anywhere else, but Geraldo Rivera mentioned something interesting late last night on the Fox News Channel overnight marathon coverage of the Iraqi "elections." Rivera said that Moqtada al-Sadr had been bribed, paid off, so that he would keep his forces from blowing stuff up during the voting..."
___________________________________
Geraldo. He's a hoot, ain't he?

You sure can take anything he says as gospel.

However, Mucky kept his forces from blowing up stuff because Mucky was warned his fat ass was going to head off for moslem paradise if he opened his mouth one more time by his closest moslem pals.

These are the principles this country was fonded under.  They were
called ''unrealistic, unworkable and just plain dumb ideas'' back in
1783, too.

Yes, it's the same model. I just forgot to writ the 'SW'.

I wouldn't be overly concerned about drift unless I were buying a more more expensive receiver. The 7600 will be fine. It's the best in its class (at least in my and many other peoples' opinions).

As for not being able to hear certain kinds of broadcasts, there's no receiver that can hear all broadcasts. It will come with a reel type antenna that will improve reception, and you might consider buying the Sony active loop model AN-LP1. It works very well with the 7600GR.

What kinds of things do you want to hear? The 7600GR will be fine for the major broadcasters and, if you want to listen to hams from time to

time, it does surprisingly well on SSB for a radio of its size and
price.

Steve

The designer(also the main engineer of DE1103 & Grundig SAT800) now ask advise of the receiver function from BCLer, the DE1108 will be the high-end receiver of DE 110X series, it comes with a large dot matrix LCD display(128*64) two way speaker system, MP3 recorder, AM sync detector, SSB, dual conversion, the reference basis is SAT700, it should has better performance than sony 2001D, 7600G, SW77 even SAT700, the outline dimensions will be large than SAT700,pls post your thougts here, I will take the message to the design, thank you!

I was all set to buy a 150 Europa from a fellow, but just as he was about to sell it to me, he told me his primary receiver went on the blink and so he no longer wanted to sell. I was a little bummed about this. At the same time, I was also concerned about the 150 Europa, as some people reported that, in addition to its stronger front end, it was also a bit less sensitive than the standard 150.

In any event, I ended up getting a standard 150...actually, it's not entirely standard because it's one of the 'black case' 150s assembled by South Midlands Communications. These were among some of the very last 150s made. It has to take back seat to an R8B in my house, but it's a damned impressive little receiver just the same. The build quality is amazing and the tuning knob is wonderful...it's smooth, gentle action will rock you to sleep!

Steve

"=2E..but I can't seem to find a radio that doesn't have se=ADveral
negative reviews..."

As far as reading negtive comments on receivers, I would be aware of
them, but at the same time try to read the positive points about a
receiver as well.  I don't know about you, but I tend to focus on
negatives when reading a review and sometimes have to force myself to
read and possibly infer the good stuff too.  The Sony ICF7600, Degen
(Kaito) DE1103, and Grundig YB all will catch a lot of radio signals.

If I didn't already own a DE1103 I would probably consider the Sony
7600.

The R-390A gets my vote. Its phase noise figures are among the best, which helps the weak DX get through.

Among solid-state gear I've owned, I consider the AR7030 and ICOM 756Pro series receivers to be quiet, but not to the same degree as the R-390A.

I know that its quite a bit more, but any feelings on the Sony
ICF-SW07?  I've been in the market for a nice travel alarm clock,/radio
and could perhaps justify this radio if it has the same quality SW
reception as the 7600.

What would be the benefit of the DE1103 over the 7600?
If none, I'll probably order the 7600.

OK, here are a few thoughts on features I would like to see on the DE1108 portable:

1. Digital readout to a finer resolution than the Sony 2001D. A readout of 0.01 kHz would be very nice.

2. A passband tuning control (PBT) such as the Eton E1/Grundig Sat900 will have, useful to at least +/- 2 kHz range. If passband tuning cannot be included, then the AM synch detector should be a SELECTABLE SIDEBAND type, as with the Sony's. Ideally, the new Degen would have both of these features.

3. Sensitivity at least as good as the DE1103, which is a useful portable here on the West Coast of the USA where signals are weaker.

4. A comfortable, large tuning knob, without audio "chuffing" (muting) when tuning. The tuning knob on the DE1103 was a step in the right direction, except it couldn't be very big due to the small size of the radio itself.

Guy Atkins
Puyallup, WA USA

Definitely ICF-SW07 has the better reception performance than 7600GR,
As for DE1103, at least the DE1103 has a rotate tuning knob, 7600GR
hasn't it

```

I'm not familiar with the SW07. As Leowood indicated the tuning knob is a definite plus on the DE1103. I find that tuning a knob is much easier than punching up/down buttons for casual bandscanning. It just seems easier to move through a band and reverse directions with one thumb on a wheel.

I used and completely wore out a Sony ICF-2002 (7600D) which was the original version of the current 7600. My only complaint was all the button pushing to tune through a band.

I also used and partly wore out a Sony ICF-7700 which used a digital/analog display similar to the DE1103. While the 7700 had some performance limitations, it did use a tuning wheel and that made tuning the bands a breeze. It was fine for listening to major broadcasters and MW and FM stations.

My Lafayette KT-340 was pretty darned quiet, as were many tube radios.
It wasn't particularly sensitive though.

The quietest digital receiver I've owned is a Kenwood R-5000 and it is
sensitive

```

I'm planning on making my first trip in 5 years up to
Dayton, and I'm on a mission to go hunting for a
good boatanchor.  Hell, part of the reason why I've
been adding some lifting to my workouts has been
to haul one of those babies back to my car over at
the Salem Mall (or whatever the hell they call that
empty shell now).

Ideally, I'd like a Hammarlund HQ-180AC, which
I've used before for about 3-4 months, but I'm
realistic enough to know that with the demand for
one that I'm not probably going to land one.  My
big question, then, is what would be a good
alternative??  I'm not interested in the R390/A
(the demand thing again), or the SP-600 or SX-88
either.  I don't really know too much about the
50's-60's Hallicrafters models, and the only other
model I'm familiar with other than the HQ-160 is
the Hallicrafters S-20R Sky Champion.

I've thought about hunting for a Hallicrafters SX-100,
but that's about it.  Anyone have some models

that would be worth it to hunt for?? Once I get
a list, I'll go doing some online research and narrow
my choices down (starting with dxing.com, naturally).

I guess you could look for a nice HQ-150

I had an Sw-07.

It was a pretty good radio - especially when you consider it's size.

They come with a very good active loop antenna.

But the buttons were quite small, and I looked at it more as a neat
gadget than a radio I'd want to use on a regular basis.

It had a lot of features for a portable - but not as many as I'm used to
with my table top radios.

Not sure what all you are looking for or the age.  Here's a couple of
National Radio possibilities though:
Look for an HRO 60 (love that dial) or a 100ASD.

Wouldn't it make more sense to study up on old receivers,
sio you'd be able to choose among what you can find, rather than
```

trying to find a specific model?

Once you figure out the sort of receiver you want, then there are
bound to be many that fit that.  Obviously some would be better than
others in a given range, but with a good knowledge base you can
better decide whether receiver A at XX dollars is a good tradeoff with
receiver B with YY dollars.

There is a book or two that documents old receivers.  It might be
worth getting one of them (if they are still in print), giving you
not only a chance to look at all that was available at one time, but
you can take it with you in case something exotic comes along and
then comes into consideration.

128 x 64 dots?  Not large
I'd like a spectrum display, that is too small for effectiveness.

I heard the interview on local radio with the Eton manager and wonder
if it is to be too much for what it is, sw and sat radio, etc.   Seems too
much.

It's a long time since I've seen one go for less than $400.

Xref: g2news1.google.com rec.radio.shortwave:49914

Hello,

The radio should offer:

Dual or triple conversion with no less than excellent front-end selectivity.

Full coverage from at least 100 kHz to 30000 kHz AM (no gaps), 76-108 MHz FM, and possibly simple air band reception (118-137 Mhz).

4 or 6 rechargeable-NiMH "D"-cell operation with MANUAL switch on back to choose AC or Battery operation (so that AC Adapter need not be unplugged when on battery power).

Synchronous-selectable sideband reception is a MUST. Should be designed at least as well as that on the Grundig Satellit 800. Full passband tuning would be even better. Lock must be held as well as on AR7030 model and must automatically turn off when tuning and then re-lock when station is selected.

A good notch filter (with at least 50 dB depth) with range of 0.1 - 5 kHz.

At least 3 IF filters (bandwidths) (preferably 4) of 2.2 kHz, 4 kHz, 6 kHz (and possibly 1 kHz for data/CW); operation of these filters should be cascaded so that inexpensive ceramic filters will give much better performance than usual. (6 filter bandwidths would be ideal.) All shape factors should be less than 1:2.

All parameters should be fully adjustable independently in all modes of reception (except FM and the digital modes).

At least 200 memories. Tuning via knob (no "chugging" or muting), "slew" buttons (5 kHz on SW, 9/10 kHz on MW, 9 kHz on LW, and 100 Mhz on FM). Signal-scan automatic tuning. Memory scanning. Automatic memory sorting. Automatic station setup (as on Sangean models) for AM and FM memories.

Remote control operation possible with a CORDED detachable remote control (at least 6 feet in length or adaptable to an extension cord if user desires).

Dial illumination via LEDs, perhaps color-switchable (Red, Blue, Green).

Dial light scheme similar to Grundig Satellit 800. (Always on or always off with AC power, on for 15 seconds with any button push when using battery power, or always off with batteries, as desired by user.)

Line outputs for external speaker(s) and stereo system. Excellent sound quality is a must. Independent tone controls (Treble and Bass) should be incorporated. Internal mono speaker of high quality is preferable to mediocre stereo speakers.

At least two external antenna inputs for AM/SW (high and low impedence) as well as an FM antenna input.

Built-in antennas should be: a LONG (possibly detachable) whip (PLUS a shorter whip possibly optionally offered for travel); a LONG (at least 130 mm) internal ferrite antenna for MW and LW. External antennas to override internal ones.

IBOC reception (AM & FM) for the US. Canadian DAB. (Possibly European DAB.) Self-contained DRM (or a 12 kHz IF output to connect to a DRM-equipped computer).

Clocks should be RADIO-CONTROLLED (and operated independently from radio and powered via 2 AA or AAA batteries). Two times zones should be available, one of which should be UTC. Local time should be adjustable for daylight-savings time (via radio control) if required; UTC should NOT be affected by DST change. One of the clocks (including seconds) should ALWAYS be visible, radio on or off.

No LEDs (except for dial illumination and possibly button illumination). Properly calibrated digital bar graph S-meter of at least 12 segments.

A high-quality plastic cabinet or, preferably, a light-weight metal (aluminum or magnesium) cabinet.

ALL internal components to be of TOP-QUALITY (formerly known as MIL-spec).

Excellent sensitivity; a 3 or 4 step attenuator (or adjustable RF-gain control) should be incorporated.

All other specifications to be of Drake R8B/AOR AR7030 caliber, especially blocking, ultimate rejection, image rejection, and, most important, dynamic range. Excellent sensitivity (a 3 or 4 step attenuator would be of help).

A carrying case (nylon or leather) should be optionally offered; this should be able to carry AC adapter, batteries, and any other options, as well as fully protecting the radio.

Servicing is important. All service information should be made available on line.

Guy Atkins has made some important suggestions; his suggestions should be incorporated also.

A tall order? Yes. A "perfect" radio? Almost. There has never been anything like it! What should this radio sell for? I would pay $1000 or more for such a radio; could it be manufactured in China for $700? Since this is to be your top-of-the-line radio, it should be designed and made as perfectly as possible.

You make it, I'll buy it!

Joe

If you have one (in decent condition) that you'd like to sell for
around four hundred, just post something about it here. I don't think
you'll have ANY trouble making a sale!!

```

Believe me, I have.  But reading != actually listening
to them.  When I was last in Dayton, there was a guy
with a rental truck who had a ton of old boatanchors
for sale, so I figure that the smart thing is to try to
look for 5-10 models, since odds are good that at a
place like the Hamvention I'll find a couple of each.

> Once you figure out the sort of receiver you want, then there are

Well, since it's been several years since I've looked
for a boatanchor, I know that prices have changed
as well.  I'm shooting for keeping it under $300, but
we'll see.

> There is a book or two that documents old receivers.  It might be
> worth getting one of them (if they are still in print), giving you

Yeah, I've been rereading the Communications Receivers
The Vacuum Tube Era by Raymond Moore several times,
but the main thing on that one is the tubes and some basic
info, not too much on other details like sensitivity and extras.
I've the first edition of Fred Osterman's Buying a Used
Shortwave Receiver around, but it's rather limited on the
tube radios.

What I was hoping for was recommendations by folks
who've actually used some of them, because it gives
me a starting point.  Since I know that time flies when
you're having fun and there are a lot of models to hunt
down, it's nice to hear from folks who've actually used
some of the old rigs.

Yes, that would be the smart way to go, unless you're dead set on a specific model.  Since the OP doesn't appear to be, it'd be smart to get a copy of the book Shortwave Receivers Past & Present by Fred Osterman.  It's not only a good reference guide to just about every tabletop HF receiver out there, it's also interesting reading.  But reading up on the different models and studying their features along with pros/cons is a smart thing to do whether you're buying a new receiver or old one.

Dear JShorr,

There is NO short wave radio made which is perfect. ALL have some deficiency(s) which may be more or less important depending on the requirements of the user.

That said, the Sony ICF-SW7600GR (preferably used with its associated SW antenna the AN-LP1) will give a novice all the performance and construction quality for which he could wish. This radio has "staying power" as well. Even if you become a "seasoned veteran" like me, you will not "outgrow" it.

It is an excellent radio for listening at home on SW as well as MW and FM (it is particularly good on MW); it has a dedicated line output so the sound can be run through your stereo system if you desire; it also travels VERY well.

The radio can also be used as a travel alarm (with TWO wakeup times).

With its whip it has good sensitivity. You won't miss much! It is VERY stable. Its SSB reception is arguably the best of any currently-available portable radio. Its synchronous-selectable sideband circuitry is offered by NO OTHER small portable with the exception of the SW-07; note that the '7600/AN-LP1 combination is far less costly than the SW-07 and performance is comparable. Having experienced listening via synchonous selectable sideband circuitry, I shall NEVER buy ANY SW radio without it!. If you purchase the AN-LP1 antenna (which can be purchased separately sometime in the future), you will find this radio/antenna combination to afford excellent performance.

It is even VERY EASY on batteries; it you use NiMH rechargeables, your power costs will be extremely low. (You don't need to buy an AC adapter for this radio. It works better on the batteries, anyway.)

The Sony ICF-SW7600G radio can be purchased new from Amazon (the least costly dealer I have found), J&R Music World (they have low prices too, sometimes less than Amazon, but check shipping costs: Amazon's is generally "zero"), Universal, AES, and some other dealers. Check the prices, but make sure you buy from a reputable dealer. AES and some others sell the AN-LP1 antenna (AES's price is $89.95, less than the dealers on eBay!).

I wish you the best of luck. I personally own three of the 7600GR models and two of the predecessor 'G model (the 'GR is better). (I also now own five AN-LP1 antennas.) I have bought many other receivers which did not give me the satisfaction that this one does. I know that if you buy this Sony receiver you will never regret it.

Best,

Joe

> Hi Mike,

You are smart to rule out the SX-88. I did a full restoration on one a year
back and it went for $7500 on EBay- I have seen them as high as $9500.

I am always disappointed when I get a chance to play with the Hallicrafters receivers- except the SX-115. Hammarlund is a bit better, but both suffer from poorer calibration marks as you go higher in frequency.
You might be interested in one of the Drake 4 line receivers. These are exceptional, have the capability of adding additional filters, one of the best NB's  ever made, 1KHz resolution, low drift and their PBT is fabulous.
I have added a full set of crystals to my R-4C and find it to be a wonderful SW RX.  Sherwood has some very nice updates. Even more importantly, they are plentiful and a fraction of the weight of the BIG boys. You'll see lots of them at Dayton.

Thanks for the info.  I'm shooting for mid 50's-mid 60's,
mainly, so those two are definitely worth a look.

Do you think that the Honus moniker is queer? I did not really think about it but it is rather cute. I guess it could be a queer name. It could be queer as in funny or queer as in bisexual.

Now that you mention it, the name is kind of queer. Thanks for pointing that out.

UrS,

Inspite of the natural number sequence :
2200 > 2600 > 2800 > 2900
.
The Pansonic RF Series of Radios came out :
RF-2200 >  RF-2800 > RF-2900 > RF-2600
.
The RF-2600 was the last (best?) of the Panasonic
'portable' AM/FM Shortwave Radios that had Analog
Tuning with a Digital [Frequency Counter] Read-Out.
.
hth ~ RHF

I have been using it for like 1 year with no system crashes. If you want, find the Exe file for the program in the proper folder. Right click on the Exe file and go to the "compatibility" tab. Choose to "run this program in compatibility mode" then choose another operating system like windows 95 or to the OS you're using.

You can also download "pictures" with RXplus. That's SSTV which I'm not familiar with at all. I mean I never used it yet.

Oh it's great for audio. Once you get over the learning curve which is pretty simple, this is great software. I can use it with 3 of my radio collections so far.

1] Kenwood R-5000
2] Ten Tec 320-D
3] Icom R-75

I could use it with my JRC NRD-525 also but I need to buy the computer card for it from France.  It's really very compact and cheap at $80 compared to the other software on the market.  So, if you have more then one radio that this software works with, you really harvest all the benfits. I tried to convince Noel to give it away for free but it didn't work :)

Anyway keep working with it. There is a Yahoo group started by him just for his software. Address all bugs directly to him there since he supports it vigorously.

I just wanted to add I bought the remote control option for the R-75 and
it's fantastic.
It has features you don't have from the radio control panel itself!

I want to buy the UT-102 voice synthesizer so I can announce the frequency,
S-Meter strength, mode etc from the remote controller in the dark like a kid
:)

Lucky

The quietest receiver I ever owned was a Scott RX-200 (same radio as the Grundig S-350 or Tecsun BCL-2000) that I bought off of E-Bay.  It was very quiet as it was DOA.

In his auction text description, you are able to click on the different details of the radio like "s-meter", "rear panel" etc.  This format looks very familiar.......Universal Radio uses this format.

Knowing this, I right-clicked and looked at the properties of Mr. Martyn's detail pics......guess what......they were all lifted from Universal Radio's used equipment photo listings.  They are not actual pictures of his 7700. Look closely at the detail of the rear panel....the serial number was wiped out.

I think that someone should report this to Universal Radio....I don't think it's legal to use their photo's without permission.   Martyn wouldn't do that, would he?

This may be the same radio..........Universal sold this 7700 for $299

http://www.universal-radio.com/used/sold099.html

This is where he lifted the photo's.  Nice job, Universal.....you saved
Martyn alot of time on this one!

That Lowe 150 went for $465 and it didn't even have a US power supply. Was it worth that price? How much would it have been worth if you could find one with a keypad for it too??

Thanks
Lucky

OK I did some checking. I guess they go for about $50 or so.

BTW, is the Preselector for the 150 a very needed addition or are you good to go as long you take overload precautions??? I read the 150 overloads easily.

Lucky

I think it's more likely that he doesn't want other folks contacting his
bidder(s), clueing them in.

The Lowe preselectors are very rare in Europe. These are one of the best
preselectors ever made -except some military grade stuff- and worth
every cent.

Do any other preselectors work well with this radio? But, yes, that PS looks
nice too.

Lucky

The WinRadio G313i by far. Noise floor -138 dBm and the continuously adjustable IF filter let's you adjust the IF bandwidth to precisely match the bandwidth of the signal. No other receiver comes close.

Geoff

The "Braun" preselector. It's better and even more rare and pricey.
The Yaesu FRT-7700 works fine with my Sony 2001D/2010.
This discontimued item sells used for the price as it was new....

I just don`t know a really good preselector wich is still manufactured.

This is an extremely stupid statement to make.  You just destroyed any
credibility you might have had.

```

i was going to skip this topic. but, being bored here, waiting for my vary late flight, on poor wi-fi, at Pgh Int AP. i use a 100 ft of (i believe, been a few years sense i put this up), #26 ins. goes from the 4th bedroom/computer/radio room, (smallest-bedroom). from the mini-plug- around the ceiling-down the hall-into the dining room, and, around that ceiling. dining room has the most windows and faces west. i call it my storm antenna. and-as of this weekend- a Wellbrook ALA330s. not being home allot, and till the winter breaks- it's hanging from the fan- over the table by a small bungee cord. the 330s is one great loop. i own a few other loops; torus/sony/aor, etc. the wellbrook is great. if it was a little smaller, i would put it in the attic. i just got it sat morn, and only had 2 days to play with it. works good. nice and quiet. as Joe A. says, lower signals, but vary readable. #58 coax takes it to the AOR and the R8B. gotta go, but, as they say here, the antenna is more than half the setup. Good DX to all...

Drifter...

I've got one that doesn't work, does that count? No sound at all...

Seriously, though, I think the radio with the quietest noise floor is my Zenith Trans-Oceanic 3000-1. It has very little audio until you tune across a station. It's not unusual to blast yourself out because you turn up the audio, thinking there should be lots of static.

I have it too :-)

I have nodified it to feed an external antenna with BNC connector. So it makes a fine selective HF preamp. I've this thing cascaded with the FRT-7700.
It works fine with my Sony but it doesn't make anything better on my NRD-525.

Mike Maghakian offered one here for $425 a few weeks ago - that was a good deal.

My impression is the one on ebay closed around the middle of the range they normally do.

You can run it active with a 9 volt battery too.
But, the 150 has a built in preamp. But that's only for the whip right?
Still, you can clip a longwire to the antenna.

That's about the price I would have expected on Ebay. I've seen 'em go for less, but I've seen 'em go for more, too.

I know a couple of folks who use highpass filters on their 150's. My understanding is that, if you just suppress everything below 1700khz, then you won't need anything like the Lowe preselector. Others may have some first hand insights to offer here.

Also, as for the keypad, 150 owners might consider getting a remote control unit for the Lowe instead. I think this will prove more convenient and probably offer more in the way of functionality. Go to www.swl-remotes.com and take a look. (I have no connection to swl-remotes, other than being a satisfied customer.)

Steve

It also depends a lot on the condition of it since the radio is not very old
but it has enought years on it where you should be careful buying. I'm sure
Mike checks his stuff out good before he sells it.

Maybe, but it took thirty years for wideband FM to become competitive with
AM.  And FM didn't replace AM.  FM didn't start growing until there was a
market for additional stations.

Is there a receiver (sub 150$us) that is, far and a way, the best one
out there?  I would really like to start playing around with shortwave
radio, but I can't seem to find a radio that doesn't have several
negative reviews...

I would willing to pay a little more for one if it was in excellent cond
and the seller was superb. It's easy to get stuck with a bad radio nowadays.

This idea ist not that good for me. I like to feed the preamp with a sinal from the attic 6th floor (my appartment is on base floor) and not with computer noise :-) There are some unused chimneys I run some coax-feedlines through. Unfortunately I'm forbidden to go on top of the roof :-((

Do you find that you need a pre-selector where you are at due to high signal
levels from various sources or is there another reason why you need one.

I've never found a reason here to use an 'outboard' pre-selector.

For sure I don't need this on the NRD-525 as you dont need one on the
Drake-R8B...  :-)
But as I had the things available I gave it a try on the NRD too  :-)
On the Sony the external antenna with the FRA/FRT combo works wonders.
You can use them together to passbandtune for much more seletivity than
the Yaesu FRT-7700 preselector alone is giving. For sure you have to
fiddle on the knobs a lot. This may be another thing with other brands.

Well, years ago, when I got back into the shortwave hobby (circa 1982 or so) I did
eventually purchase a FRT-7700 for use with the FRG-7700 which I had at the time.

Check out the Sony ICF-7600GR. I think it's probably just what you're
looking for.

I'm pretty sure it's set up like the 7030.  The whip connects to the regular
antenna jack.  You can use the preamp with any antenna, but if it's a large one,
you should expect overloading.

Never bought a radio from Mike, but he does have a good reputation.

Besides condition, options will be a factor - some have backlights for the LCD,
others don't.

Two variants you don't see very often are the Marine and Europa versions.  The
Europa had improved specs and a stronger front end.  Not sure what the
difference was on the Marine one other than it was white.

Ok that's better. I'm spoiled by the preamps on the R-75.

Yes but I hear the Europa model is far and few between. I would buy a little
pen light for the original 150 at night. I bet it wouldn't be hard to hook
at a good LED right over the display.

Are there any drawbacks to this model?  I don't know what I'm talking
about here, but I've read about a problem on some receivers with drift
and also some receivers not being able to pick up certain broadcasts.
Does this have either of these problems?
Also, amazon carries the Sony ICF-SW7600GR -- is this the same model?

(he obviously missed his calling selling pre-owned cars
where he can make much more cash selling cars to suckers
instead of the tightwad ham op's)

Curious....look and see also that his current
High Bidder, by a -strange coincidence-, has his
user ID kept "private..."  What's this all about ?
Shill-bid the price of the item up to garner
maximum profit and publicity perhaps ???

Check the other auctions also. (all ham stuff with strangely
similar photos)  I wouldn't touch anything that this guy
is selling with a 20 foot pole.

Dear Jim,

"JTaylor" wrote in his reply to you that you should put "gloat" in the
title! THAT is an UNDERSTATEMENT regarding the price you paid for a
Hammarlund HQ-170! This radio is their top-of-the line ham-band only
radio of the time (early '60s). The general coverage equivalent is the
HQ-180 (for which I positively "LUSTED" when I was young; the '180 sold
for $429 in 1962; that was the price of a good used CAR!). The radio is
an absolute classic and I should recommend you inquire about having it

restored to like-new condition (when finances allow). While it picks up only the amateur bands, you will not find a radio that does so any better. These radios are the only "boat-anchors" which remain competitive today.

It's a triple-conversion radio and it was made for several years starting, I believe, around 1960.

Your radio sold for $359 in 1962, $369 if it is equipped with a clock. Hammarlund made a matching speaker, the S-200, which sold for $19.95 at that time. (I checked all this out in my 1962 Lafayette catalog. I couldn't afford a Hammarlund, so I bought a Lafayette HE-10 [$79.95] and its associated speaker, the HE-11 [$7.95]. I also bought a pair of Clevite "Brush" BA-200 headphones [$14.70]. I still have all of them! They still work as well as they did when new [and those headphones are still as uncomfortable as they were when new!]. The only "servicing" the radio has required over the years is a few tube replacements. Five or six times a year I "fire it up" for old-time's sake.)

While I personally do not collect old radios, I envy you owning this particular one and I wish you the best of luck with it!

Joe

While I do own many radios, and have seen prices on ebay,  I didn't think
what I paid for either of these radios was anything to "gloat" about.  If I
couldn't have gotten either seller to drop down to what I was willing to pay
I would have walked away.  I am genuinely curious about the Hammarlund
though as all I could find out about it was what I read on eham from a
couple people.

(someone needs to flag e-Bay Safe Harbor on all this malarkie goin on!)

FROM THE E-BAY SAFE HARBOR F.A.Q. :

"Shill bidding is the deliberate use of secondary
registrations, aliases, family members, friends,
or associates to artificially drive up the bid
price of an item. (This is also known as "bid padding.")
Shill bidding is strictly forbidden on eBay.
eBay members found shill bidding may receive
warnings or indefinite suspensions of their accounts."

Dear Jim,

As I stated, I never owned one. But having read "plenty" about the Hammarlund radios at the time (they were considered second only to Collins then), I know that this radio is a true work of art. In the early '60s it was considered one of the very best ham-band receivers.

Hammarlund always featured (according to contemporary reviews) stability second-to-none. Their dials were particularly well-calibrated also. They were, as you can see, constructed like a tank. Their sensitivity and selectivity were also top-notch. Internal speakers were not included in those "boat-anchors" mainly because there was no room for them! Yours is a particular "heavy-weight," both in mass and performance.

I can't answer any particular questions concerning this receiver as I never even had personal experience with one (though I sure wish I had!). But I think its reputation at the time and even now speaks for itself. Take good care of it and, if you ever do sell it, don't sell it cheap!

Best,

Joe

> tuning knob?

That depends. Some people actually prefer the 7600G/GR tuning key layout
to a Sangean-style tuning knob. That said, you're never as fast scanning
bands as with an analog set. But overall I don't think it's overly
dramatic. Reception wise the 7600GR is certainly still very good in its
class, with SSB being hard to beat due to Sony's "secret weapon"
CXA1376. I would certainly like to get my hands on a datasheet of that
IC, being a very curious nature in things like this. (I guess it would
be in Japanese, though.)

One thing I have long waited for -- a radio with USB flash drive support.
It would be great to record off the radio with different quality bit rates
(low to high) and transfer the files to my pc for CD archiving or vise versa
for playback on the radio.

Thanks Joe. Only amateur bands? :( That kinda sucks. Good thing I have others. I doubt I'll restore it. I have literally over 100 odd shortwave radios and after I buy them and play with them for a while they just sit and collect dust. I call them my "retirement fund" I'll probably put most of them up on ebay in 10 years or so and be accused of being a "capitalist pig" LOL

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message news:1107202722.056475.259340@c13g2000cwb.googlegroups.com...

> Dear Jim,
>
> "JTaylor" wrote in his reply to you that you should put "gloat" in the title! THAT is an UNDERSTATEMENT regarding the price you paid for a Hammarlund HQ-170! This radio is their top-of-the line ham-band only radio of the time (early '60s). The general coverage equivalent is the HQ-180 (for which I positively "LUSTED" when I was young; the '180 sold for $429 in 1962; that was the price of a good used CAR!). The radio is an absolute classic and I should recommend you inquire about having it restored to like-new condition (when finances allow). While it picks up only the amateur bands, you will not find a radio that does so any better. These radios are the only "boat-anchors" which remain competitive today.
>
> It's a triple-conversion radio and it was made for several years starting, I believe, around 1960.
>
> Your radio sold for $359 in 1962, $369 if it is equipped with a clock. Hammarlund made a matching speaker, the S-200, which sold for $19.95 at that time. (I checked all this out in my 1962 Lafayette catalog. I couldn't afford a Hammarlund, so I bought a Lafayette HE-10 [$79.95] and its associated speaker, the HE-11 [$7.95]. I also bought a pair of Clevite "Brush" BA-200 headphones [$14.70]. I still have all of them!

I think the R4-C was the only one of that lot that was capable of actually
adding filters to.

I believe the R4-B was actually the better receiver for SWBC IMHO.

With private auctions, you'll have a tough time proving shill bidding.

Ebay may be able to check to see if bids are coming from the same IP address as the seller.  This would probably be a better shot than asking them if gottahaveit1995 is bidding - as he was already caught shilling with that user id, and I doubt he'd repeat the mistake with the same user id.

He went to the private auction format when folks here started talking about warning his bidders about his practices.

Indeed, as soon as I asked him a few questions he stated that I was blocked as a bidder. Not that I was really interested anyway, but ask a few pertinent questions,
and you're done!

I am Leowood Wang from CHINA, the designer of DE1103 (also the same designer for Grundig SAT800) is my friend, pls check some interesting test record for DE1103 as follows

http://www.degen.com.cn/images/1103/1103-test.htm

also here is a Block Diagram
http://www.degen.com.cn/images/1103/de1103-box.jpg

Hi LW.

Thanks for the links and information regarding the coming DE1108.

Please be aware that at least one member of this group may not approve of the work you've done, and will say so. (They already have in previous threads) Their reasons for disapproving are political and could possibly involve other nefarious motives. Regardless of that, you are welcome here and we look forward to sharing shortwave radio feedback with you.

What you want is an HQ180A which has the 170's triple conversion, and
general coverage or an
SP600JX with Hammerlund HC-10 converter.  The 170 and 180 converted down to
455KC and
then had a tunable IF receiver that received 455KC + or - 5KC approximately.
It had a set
of sharp IF filters at 60KC and you could select either sideband and use a
bfo to boot. I really liked the receiver for the 1963-1970 period ham work.
I got to use a 180a and found it to be excellent as
well.
Ed, N5EI

to use a 180a later.

You guys got that shit right. If Iraq becomes free, It's going to affect
people all over the world. Now if we can find enough socks to stuff in the
naysayers traps we might just have an easier go of it.

B.H.

LW2,
.
Using the Sony ICF-2010 as a 'standard and
a Grundig Satellit 800 M as a Reference:
.
*  DRM = Digital Radio Mondiale Built-in DRM Signal Processor.
.
*  Radio Data System {RDS} Information Display
.
*  AM SYNC with Selectable SSB
-  Dual Side Band AM-Sync = 6 kHz
-  Selected USB/LSB Single Side Band AM-Sync = 3.4 kHz
.
*  Four AM Shortwave IF Band Widths
-  DRM Extra-Wide 12 kHz
-  AM Normal 6 kHz {AM Sync}
-  DXing Narrow 3.4 kHz {AM-Sync Selectable SSB}
-  SSB 2.4 kHz
.
*  Two FM IF Band Widths
-  Stereo/Local FM Normal = 210 kHz Wide
-  Mono/DX FM Distance = 130 kHz Narrow
.
*  RF Signal Input Control Three Position :
-  BOOST = Built-in 10 dB Pre-Amplifier
for the Whip and Ferrite Bar Antennas.
-  DX = Normal
-  LOCAL = Shortwave Only 2-30 MHz
Band Pass Filter with -20dB Attenuation
for both the AM/MW Band and FM Band.
.
*  Large Tuning Knob and Up & Down Tuning Buttons
with about 240 to 360 Memories.
.
*  Dual Tuning Steps: {Fast and Fine}
-  FM = 200 & 20 kHz
-  AM = 10 & 1 kHz {AM-BCB = 9/10}
-  SSB = 1 kHz & 100 Hz
.
Separate Antenna Inputs :
-  FM "F" / PAL Connector
-  AM/MW and Shortwave
- - HI-Z Dual Terminals {A&G}
- - LO-Z Jack SO-239
.
*  Speakers Three (2:1) for FM Stereo
-  One Rear Facing Bass {4.5" Sub-Woofer}
-  Two = Left and Right Front {3" Stereo}
-  Audio Output Selector Switch:
- - Mono Talk & News {Voice} Front Two

- - Mono Music all three speakers
- - FM Stereo - HiFi (2:1)
NOTE - Sort of like the Grundig Satellit 2400 Dual
Speakers put the Controls in the Center and the
Speakers on the the Left and Right Front Sides.
http://www.dr-boesch.ch/radio/grundig-sat2400.htm
.
*  Built-in "D" Size Rechargable Batteries with an
'external' AC>DC Power Adapter / Battery Charger.
Auto/Car DC>DC Power Adapter / Battery Charger.
.
*  The Right "Size" - About the Size of a Panasonic
RF-2600 'portable' AM/FM Shortwave Radio :
NOTE - Look at the Lay out of the Controls
and the Big Main Tuning Knob.

Yes, I picked one up not long ago. I wanted something that satisfied the following conditions:

1. Is compact enough to carry around on "mini-DXpeditions"
2. Will yield better performance than a high end portable
3. Is well-built
4. Is reasonably priced, but a good value for the money

I decided that an HF-150 would be a good way (though by no means the only way) to satisfy all these conditions. I'm enjoying it. I'm happy with the purchase and am enjoying the receiver.

Steve

Stumbled onto this one last night. 7.811 MHz, USB, originally heard the contact at 0440 UTC 01/31/05, I have it fairly clearly, the time being 2200 UTC. Mentions on the frequency have been made of the "Airforce" (the next word was garbled), but I found the following online:

From: http://www.dxing.com/dxr/dxld4179.htm Glenn Hauser's DX Listening Digest, from December 1, 2004

"** U S A. As noted in DXLD 4-178, I have heard the new AFN frequency presumably from Florida on 7811 USB //5446.5 USB with pop music, PSA's US Air Force news. at 0223 on Nov 29. Not //10320 USB which was carrying Monday Night Football game. Poor but clear (John Fisher, Kingston, Ontario, DX LISTENING DIGEST)

I was hunting for 7812.5 AFRTS per your recent World of Radio and found them Monday night on 7811.00 USB with Ricky Nelson's "Garden Party" and ID and Christmas greetings from clebs including that little yellow Bart Simpson // 5746.5 and 12133.5 from 0028z on Nov/30/04. Rock solid, clear S3 (Wells Perkins, N.J., Nov 30, DX LISTENING DIGEST)

7811 USB finally heard here, Dec 2 at 0140 when the AFRTS website was being given; but it was quite weak, audible only on longest antenna with some local noise sources turned off; seems 7507 was stronger (Glenn Hauser, OK, DX LISTENING DIGEST)"

They are playing NPR news at this time, and I am receiving it with an indoor antenna that goes around the ceiling of a small room, the radio is an Icom R-75.

Soliloquy.

While we are on the subject -- there is a lot more to a receiver than sensitivity -- MUCH MORE

Best read W8JI  pages to see what you really want to consider when selecting a receiver.

URL:
http://www.w8ji.com/receiver_tests.htm

BTW: The Ten Tec Orion is top rated.

Hmmm - now where is that spare  $3599.00 ???

Ten Tec Page URL:

Today mF most often means millifarad.
But in years past mF meant micro,
as in uF, farad.
Some diagrams as recent as the late 1990s
still used mF to equal uF.
Conversly, before the mid 1990s, no one but
the military EMP research labs had Farad or
milliFarad caps. I still remember when I saw

my first .47F capacitor. Kind of freaked me out.
I used a couple of 0.47 caps to replace the
lithium backup cells in my R2000 and my IC-28A.
If I had a few $100 to spare, I would be temtped to
buy one of the several Farad caps designed for the
automotive crowd. A cap that size would allow me
to coast through most power glitches.
Terry

I did the bulk of my dx'ing and QSL'ing with Drake!

And I didn't even have a computer at the time either.

leowood2000@msn.com schrieb:

> The designer(also the main engineer of DE1103 & Grundig SAT800) now ask advise of the receiver function from BCLer, the DE1108 will be the high-end receiver of DE 110X series, it comes with a large dot matrix LCD display(128*64) two way speaker system, MP3 recorder, AM sync detector, SSB, dual conversion, the reference basis is SAT700, it should has better performance than sony 2001D, 7600G, SW77 even SAT700, the outline dimensions will be large than SAT700,pls post your thougts here, I will take the message to the design, thank you!

Some points I can think of offhand:
* Use good quality IF filters, i.e. 6-element ceramics or such for AM. (If these should not be available, get inventive.) I'd combine these with a wider tail filter. I guess DSP usage is not an option? Some care when applying the 1st IF crystal filters may not hurt, to ensure good image rejection (as well as intermodulation characteristics). FM should use 3 cascaded filters with a medium bandwidth to match the Satellit 700, with 3 gangs (tuned front-end circuits) recommended.
* With a two way speaker system, make sure sound is as good as possible with the concept, and that not only to Chinese ears. Audio engineering has sadly been frequently neglected in the last 10...15 years or so. If some kind of EQ circuit (for speaker operation only) is needed, so be it, the radio makers of yore also used such tricks. (There should be an additional tone control, tastes in sound differ after all.) Some research in terms of vibration suppression or loudspeaker building in general and such may be of help. Given the sound is right, a simple line-level 3.5 mm (stereo) input for amplifying purposes might be a nice touch.
* Get the internal shielding right, particularly with a non-negligible digital section.
* Oscillator pulling by lighting LEDs (DE1102 in SSB) and other such funky stuff better be ironed out, along with operating kinks. Plain ol' analog volume control and paged decimal presets please.
* Front end selectivity for the AM ranges should be one filter for LW, one for MW and then several (~ octave) for shortwave, maybe further varactor-tuned. (The '700 had an electronically tuned preselector, though it seems alignment of the thing from the factory wasn't always that great.) Those living near MW transmitters (rather common in the US) are likely to appreciate a highpass filter for shortwave.
* A big receiver should offer sufficient space for a big ferrite rod antenna, for good LW/MW (and I'd also suggest low SW up to ~2.5 MHz or so, where telescopic antennas tend to be inefficient) sensitivity and directionality. Something rotatable � la RF-2200 might be worth considering; the bigger a receiver is, the more tiresome rotating the whole thing becomes.
* I suggest at least two different frequency steps, better 3 - usual frequency grid for the band, 1 kHz and then something smallish (maybe 100 Hz plus analog fine tuning, or <= 20 Hz without).
* Memory presets: With EEPROMs being rather inexpensive these days, a few hundreds with at least 8-digit name tags should be possible. But if MP3 recorder functionality (with commodity flash memory, I guess?)

is already present, one could also use the associated storage. If this should be removable, a simple file format like CSV could enable easy presets interchanging and PC based updating. (This might even include firmware updates, which certainly are not a bad idea.) The MP3 recording probably features adjustable sample rates, (average / variable, not only constant) bit rates and mono/stereo selection? (Shortwave recordings would probably require no more than 11025 Hz mono and thus a relatively low data rate, while FM stereo would best be recorded with 32000 Hz or 44100 Hz in stereo.)

* In spite of all possible complexity, the essential functions - tuning and frequency entering, tone control, basic preset saving and recalling - must remain simple and intuitive to use. If someone can figure these out without reading the manual, this is good. On a bigger set, placement of things like a tuning wheel requires some thought in order to avoid (arm related) fatigue during longer listening sessions.
* Any plans for DRM reception? (Provided some matching and not so power hungry ICs are already available. If not, a 12 kHz IF output derived from a suitable spot - maybe behind a 10...12 kHz filter normally improving ultimate rejection - is better than nothing. Reserving some space for an add-on DRM board may not hurt then.) What about RDS for FM?
* Dual balanced 1st mixers have been very similar in portables, and that for over 20 years now - how boring. Try some other circuit variants, maybe these give better results.
* For a receiver of this class, availability of servicing instructions is virtually a must.

I'm pretty sure build quality will not be an issue, given I see little reason to complain about this even on the little DE105 (I recently obtained a relabeled one). DEGEN certainly has the potential to become a major player in the mobile entertainment market.

In additional to the other features, how about a couple of wide IF bandwidths?

10 kHz for SW
20 kHz for AM and some digital modes

These bandwidths would allow users to take advantage of the full bandwidth that may be broadcast (5 kHz on SW and 10 kHz on BCB). It also facilitates bringing out the IF for DRM or other digital modes.

when using the selectable sync youare forced to use the 2.5 filter.
that is unacceptable.

the front end performance is not acceptable.

the IF filter options are very limited, TWO !

has no features to speak of, like bass and treble
short battery life

I don't remember some of the other issues

Me too.  I've got a great rf-2800 bought new in the 70's, but the antenna is broken.

I think the only solution is to buy another one on Ebay, and scrap it for the parts.

I hope I'm wrong.

It's a long story, but I'll try and keep it short. Back in the old days, when I called up a BBS for the very first time, I wasn't prepared when the software asked me for a handle. I looked around my office for some sort of inspiration, and lo and behold...my eyes fell upon some of my Honus Wagner baseball cards that I had  hanging on the wall. It was just a throw away sort of thing, I thought, but then I made friends there who invited me to other boards, and from there onto the Internet, and I just used the same old name so that they would know me when I showed up. I've been using it for nearly ten years now, it's almost like my own name since so many people know me by it, and I kind of like being able to say that I've never posted to Usenet under any other nym. That's it.

By the way...shame on you if you don't know who Honus Wagner was. Of course, you -are- in Canada...so we'll let it slide. ;)

Hi there!

For current program schedules, here's a good place:

www.primetimeshortwave.com

I also like this site: lots of good stuff for all SW listeners here:

www.radiointel.com

Have fun!

Jackie

Hi Brian,  Not sure where you came up with those damage assessments, but the hull steel on U.S. Submarines was made of HY-80, an extremely tough steel alloy that can withstand the kind of rock-collision that the USS San Francisco just survived. On my nuclear submarine, there was no aluminum in the pressure hull, or frames of the boat.

Here's a little tribute to my shipmates in the Silent Service:

http://members.cox.net/223bthp/subs.htm (Turn speakers up)

In EU maybe, but here in the states I have never had the 150 overload- even
when on a 4 element 20M yagi

> the IF filter options are very limited, TWO !
>
But those 2 are nice filters. AM sync with the narrow filter sounds fine -
still has lots of highs.
> has no features to speak of, like bass and treble
>
True- the SP-150 fills it out nicely, but they are not cheap. And having to
use it gets away from the portability.

 short battery life
Not an issue with the NiMH batteries- mine with backlight goes well over 12
hrs.>

```

I have an ICOM 737 and I'm about a 75% c.w. user.  It's been working
great with no problems - until I turned it on this evening.  The keyer
won't make dots.  The dash side is o.k.

I checked out continuity of the plug, cord and the keyer paddle.  When
I short the dash side conductor of the 3-conductor cable to the common
conductor, it makes dashes.  When I short the dot side of the
3-conductor to common, nothing happens.

When I hook up my bug to the jack and put the key switch in appropriate
position, the bug works o.k.  But when I go back to the keyer, still no
dots.

This leads me to the conclusion something is wrong with the jack on the
back of the rig, or the internal keyer circuitry in the rig.
Anybody had any experience like this??

Thanks and 73

George

The numbers vary depending on who you're talking to, but it's always between
50 and 70...and they're in widly varying conditions. Naturally, someone will
now go and find a site where they claim differently. <g>

> It said Brian Seigel has a good number of the T206

2.5 in AM????

Isn't that a tad narrow for AM???

Lucky

Given all the talk about grounding systems on this group in the past, I
think most of us here know that a good RF ground wire must be short to
avoid introducing too much inductance into the grounding system. I asked
the question because I wanted to know more about the relationship
between a good (short) RF ground wire and a ground radial system. Does
one work better than the other or should both be used together? Where's

John Doty when we need him? :-)

It seems the times are changing. 'Mfd' has always meant micro-farads in
the US but with the large capacitors being made now, 'uf' is becoming a
better notation so it's not confused with 'milli-farads' for the big

caps'.

The Sportcat is for VHF/UHF and the 7600 for HF (shortwave); totally different frequency ranges.  You won't receive police/fire/VHF-marine etc with the Sony so if that capability is important to you hold onto the scanner.  Of course, you could still give it to your nephew and replace it with a new scanner for yourself.

sdaniel13@nyc.rr.com wrote:

> Interesting thing happened tonight. For some time I've been using a speaker that's received plenty of criticism: the Drake MS8. Earlier tonight I heard VOIRI (Voice of the Islamic Rep. of Iran) on 6120 khz and the signal was incredibly strong and clear. I decided to sit back and listen, but the announcer's voice was just so bassy and 'muffled' sounding that it wasn't always easy to understand her.
>
> So, I decided to get an amplified Sony speaker out of my closet and hook it up to my R8B. The Sony speaker definitely produced a sound that was somehow 'smaller'. Even so, the announcer's speech was perfectly intelligible on the Sony, while it wasn't on the MS8. From now on, I think I'm just going to use the Sony speaker. I think there are still better speakers out there and when I find one I'll 'trade up'; but for now the Sony will do.
>
> I guess the lesson here is: Don't overlook the significance of your speaker!
>
> Steve

Good advice. You could replace the speaker inside the MS8 (box) with one that has a tweeter (coaxial) and probably achieve the same result. Then you would have an MS8 that sounds like a better speaker but still matches the R8B.

Are you saying the noise could also be heard on the Lowe but it was just lower?

```

You can buy scanners with complete frequency coverage (including shortwave), like 100-Khz to 1300-Mhz. One model is the Yupiteru-7100E. Costs about $300-US.

I wonder if it's really her radio. It would be very expensive in China.
I like the shovel triangle loop antenna. :-)

I guess I got the most enjoyment from my old Hallicrafters S20R many years ago. I heard more stations on that radio than any since, which shows that you don't need a high end receiver to have a lot of fun with shortwave. I also enjoyed the Sony-2010 because it was so far advanced for it's time, when it came out in the early 80's. I now enjoy the R8B the 'most'. :-)

[Last modified 12-Feb-03]

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA.  Includes broadcast bands used outside the USA.  Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary

(non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

### SHORTWAVE BROADCAST BANDS

| | |
|---|---|
| 2300 - 2495 | 120 Meters |
| 3200 - 3400 | 90 Meters |

# Phone line as SW antenna

Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

## WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

## INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

## HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
 Phone line                                    RF connector
    red          .01 uF     center cond.           / \
     or   o--------||------------------------------|-o |  To receiver
   green                                            \ /
                           50 ohm coax               |
   ground                                            |
     or   o------------------------------------------+
    N.C.                      shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
 Phone line                                    RF connector
    red         --------    center cond.           / \
     or   o----|        |--------------------------|-o |  To receiver
   green       |        |                           \ /
               | FILTER |  50 ohm coax               |
   ground      |        |                            |
     or   o----|        |----------------------------+
    N.C.        --------      shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul

Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
             }           }
             {           {
             }           }
-------------+-----------+----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

| | |
|---|---|
| 100 kHz | -120dB |
| 500 kHz | -68dB |
| 1000 kHz | -38dB |
| 1600 kHz | -15dB |
| 2100 kHz | -3dB |

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

| | |
|---|---|
| 100 kHz | -105dB |
| 500 kHz | -60dB |
| 1000 kHz | -35dB |
| 1600 kHz | -15dB |
| 2300 kHz | -3dB |

These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date:    22 Apr 92 08:59:33 GMT
From:    johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

```
            LOW-PASS FILTER  (Rejects FM, TV, etc.)

                    0.36 uH  0.42 uH   0.36 uH
   signal  -------+--UUU--+--UUUUU--+--UUU--+-------  signal
                  |       |         |       |
             82  ___  180___    180___     ___  82
             pF  ---   pF---     pF---     ---  pF
   shield         |       |         |       |         shield
    braid  -------+-------+----+----+-------+-------  braid
                               |
                         chassis ground
```

I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

## COIL WINDING

You can make the coils yourself using this formula:

$$L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)$$

$L$ is the inductance, in uH
$A$ is the length of the coil, in inches
$B$ is the mean diameter of the coil, in inches
$C$ is the diameter of the wire, in inches
$N$ is the number of turns

For small wire, you can assume $C = 0$.

## PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

| PART | DIGI-KEY PART NO. |
|---|---|
| 82 pF capacitor | P4023 |
| 180 pF capacitor | P4027 |
| 820 pF capacitor | P4184 |
| 1500 pF capacitor | P4187 |
| 0.33 uH inductor | M8007 |
| 0.39 uH inductor | M8008 |
| 2.7 uH inductor | M8018 |

The cost of these parts is less than $1 each.

```

Put the '170' back on Ebay and advertise it for Ham's. Then you can buy
another radio, like you need more! :-)

It's not a bad tiny portable for receiving strong stations, but don't expect great things with an external antenna. I found that with just a 20 foot wire that medium wave stations bleed into SW around 6000 khz.

SSB tuning is possible but not practical.

MW DX is okay but not great, but again, the radio is tiny.

Sangean ATS-803a so far is the best.

jimg wrote:

it's always important to keep the ground wire length well below 1/4 wavelength of the max freq your interested in. Assuming it's short enough to prevent distributed effects, the self inductance of a straight 16ga wire is about 0.33uH/foot...so 50' at 10MHz is about 1Kohm...thats a fair amount of impedance and is why you pick up all that noise.....

so what's the ground radial system do? in short, it provides the counter-poise to the wire strung in the sky. the antenna-ground system create the differential signal which is applied to your receiver's rf amp...the better the ground poise, the more 'sensitive' your antenna...is this some kind of linear relationship? like double the ground system and double the antenna sensitivity...nope , not that simple and there's not enuf room here to make all the variables clear...but the better the grounding system, the better your antenna will "work"...some ppl have a good enough conduction under the soil that a simple 10' ground rod intersects this "layer" and the dx cpmes rolling in...other ppl have rods sunk in the earth and buried in wild patterns all over the yard to get the same effect.....

so the simple answer(s) is: your ground wire length influences noise (what we call common-field) pick-up so shorter is better; the ground radial system improves the signal strength at the  receiver input...and i hate simple answers to a very complicated system...

jimg wrote:

first disconnect the antenna from both receivers and short the antenna terminals...turn up the rf gain and audio...both real quiet, i bet? good.

then it's from the antenna-ground-rf front end combo... are you using the 50ohm input on both, or the long wire input?

lets say, the long wire inputs....well, i doubt they have the same input impedance...if your not using coax and don't have a reasonable impedance match, then the antenna's are going to act very diffferently...( how are they grounded? tied together? hmmmm)

if your using the 50 ohm inputs, have a well designed antenna with good matching, then we have to discuss the reactive component at the antenna input...and even the selectivity of the first if stage.... you really want to know, we'd have to take 'em into a lab with very controlled conditions to trace out the diff...but it's not magik...just complicated

Dale,

which piece of equipment is deemed more important for the 150. The
preselector or the SP-150?  I was thinking for the money that those items
cost, one could buy a DSP unit for the 150 instead.

Lucky

I have been listening to them for a while now.
I live in Florida and two of the stations are down here in Key West Florida.
I was getting the frequencies in great a few months ago on 7507 USB. Then,
after all the hurricanes down here, I never got them in as good as I used
to. In fact, it got so bad I couldn't listen to them at all.

About 2 weeks ago things started to change for the better. I can now pick up
7811 USB very well most of the time. But there are times when it's just too
weak to make out. I really like this station though. Interesting to listen
to.

The other station I use is 5446.5

"Little brother"? Nothing little about that  bad boy! I heard that, at
one time, the R-392 was five feet tall and then someone dropped a
pallet of bricks on it and squished it down like that! ;) (I've had one

```
of those- great radio!)

Did you ever put D-sizes in the FRG-7?  I don't own one but a friend
does.  He's never put "D"s in but it is possible.

Some where i thought that I had read that
Tecsun GEM China (PRC) 'owned' or was
a major share holder in Degen.
? Now Is That True ?
```

.
i want to know ~ RHF

Actually Degen used to be a subsidiary of Tecsun several years ago, the main business is radio sales, aftermarket service and Electrical Design, no production line, some Tecsun's radio electrical designing was come from Degen, but now Degen was completely separated and independent, Degen has full capacity on receiver designing, mass production and has own sales channel, Degen become a powerful competitor of Tesun thus far , sure some Tecsun's shareholder has shares of Degen, but it absolutely not affect the competitive situation. once tecsun bring out a new model, then Degen has a similar one to compete, for example: Tecsun 9700DX~Degen 1107, Tecsun PL550~Degen 1103, Tecsun PL350~ Degen 1105, Tecsun PL200~ Degen 1102, now Degen are building the flagship of DE110* series , we would like to see what does the Tecsun bring to desk

Yes, it was possible but I don't recall the battery holder as being standard
equipment. I think it was offered as an accessory.

```

Thanks for all of the input guys.

Although the noise sounded like atsmopheric noise, part of me thought it might be something else...and I turned out to be right. After staying up half the night, I discovered a laser printer that had been left turned on in a different room. I turned the printer off, not really thinking that it would be the cause of the noise on the Drake. But when I then walked into the room where the Drake sits, it was on and there wasn't a trace of noise. Just for the heck of it, I had to turn the printer back on to see if the noise returned...and it did.

It's amazing to me that the Drake could have been affected so much more severely than the Lowe by the noise from this printer, but now I'm just glad that the noise is gone. Everything sounds the way it should now.
Steve

Yes, your group does look like a radio club.  Do you share loggings.
When your group is listening to radios while in the city, is signal
interference as big a problem there as it is here? Some of my neighbors
have very noisy power tools and appliances.

Probably my Yaesu FRG 7000 or FRG7, or DX-302.  I like all the knob turning
involved in dialing in a "Wadley loop" type radio.

Don't get your hopes up. It's queer as in unusual. And real names can
indicate sexual orientation in your book? I'm surprised at you. Or maybe I'm
not. Enigmatic, I know.

As an aside to sdaniel3's thread further down, what's the shortwave receiver that gave you the most "fun" while listening?

It doesn't have to necessarily be the best rig, just the one that was the most enjoyable to work with.

Mine is probably a Grundig S350 bought a few months ago. Definitely not a top performer, but great audio and portable.

Re the R4b vs. R4c ..
R4b .. no filters needed .. has 10 extra crystal sockets .. probably better audio on a stock 4b than on a stock 4c.

R4c .. need filters (InRads RULE ! ! ! ) .. has 15 extra crystal sockets. Audio not quite as sweet as on a well tuned R4b, but not shabby. And I'm sure there's a Sherwood mod that'll smooth it right out.

PLEASE .. do a nice job on the Sher-Mod or farm the work out to someone who can. ( I am the owner of a previously butchered 4c. ) (Repaired and restored by the author of Drake-Mods, so all is well.)

Re older radios - I recently came across a nice Sears branded Frog-7. Not shabby at all. Downright surprising, in fact. (Don't make me a/b it vs the R4c.)

Re Dayton - I've been the last 4 years - saw several real nice SX-100s, R4b/R4c's, But the pickin's seem to be getting slimmer as the years go by. (Last year there was a real nice / shiny Drake 1a there. Emphatically NOT FOR SALE said the owner.)

To everyone seeking a nice radio at Dayton this year - Good luck in the hunt.

There'll also be some keepers at Dalton, Huntsville and Shelby, as well as other fests, so if you can't make Dayton, don't despair.

It all depends on the card, naturally. <g> Mine aren't that special. But
what I'd give for a Wagner T206, in -any- condition. I've got one or two
from that series, but of course not The Big One.

My parents, God bless them both, bought me a Lafayette HA-230 as a Christmas gift when I was 10 years of age, in 1959. I had that rig for 13 years without a single problem in all that time.

I remember some very cold, Newark [NJ] winter nights sitting around that old glow-in-the-dark radio! Staying up all night listening to stations from around the world or amateur radio operators in the next state. Became friends with several of those "hams". Great bunch'a people.

Alain...WPE2OLR, the old Newark News Radio Club, circa 1960

Or/and a USB interface for computer control and audio to the PC for recording to hard disk or remote access. If you do this, please publish the full specifications so that others can write software - there are already some very good amateur packages that could easily be adapted. Bluetooth would be good! If a USB interface is included, it should optionally be able to charge internal batteries, like the iPod.

A noise blanker that is designed to cope with the modern urban environment of switch mode power supply, broadband and other interference. A form of diversity reception may help here.

Second IF brought out to a socket, for PC-based DRM reception.

Airband.

An intelligent memory system, that remembers mode, filter and other settings. It should be possible to easily set up groups of memories - not just '7 groups of 10'  - that can quickly be scanned through from the main dial, and also have a 'dump this frequency to first free memory' single button. If at all possible, get a usability expert or panel of active BCL listeners to provide feedback on the user interface design.

My Degen 1103........

Was listening to AM'ers on 3885 this last Saturday evening late.....All sigs were near full-quieting (dem boys do run high power and lots of iron).....using just the little whip while laying in bed.  I fell asleep listening and woke up to find the radio dead.....internal batteries died, darn.

Wife was sleeping....no action there either.

Turned over and dozed off.

Holy Sh-t! Yea I can't remember what mine were. Man that's a lot for a card.
How many in existence? It said Brian Seigel has a good number of the T206
series cards. Obviously the Wagner is the rarest.

B.H.

No one has mentioned an RF gain control.  I think that is one of the
biggest shortcomings of the Sat 800.  I would like to see that ahead of
notch filters, recording devices and a bazillion memories.

Mr. Spock's observations about the HF-150 are accurate. However, I
don't think there are very many people who've used the HF-150 who'd
want to criticize anything relating to its audio or synch detection. I
find both to be superb.

People like what they like, though. I really enjoy the 150 and I
appreciate its 'minimalist' design, but it won't be everyone's cup of
tea.

I just ordered the Sony, but had one last comparison question (I could do a return).

I just read an advertisement for the eton E10 and E100.  Anyone have thoughts on these two models as compared to the  ICF-SW7600GR?

I just purchased (though it hasn't yet arrived) my first SW radio, the Sony ICF-SW7600GR.

I currently use a little Uniden Sportcat to scan a couple of police/emergency and ham frequencies.  Would it be safe to give the SportCat to my little nephew, or are there things that it will pick up that the ICF-SW7600GR will not?

Also, I ordered a copy of Passport 2005 -- if you had to reccomend just one or two more books or websites (hopefully websites) what would you reccomend for the beginner?

How about being controllable from a PC, and also flashable memory banks that could hold program details and schedules for portable operation?  The schedule details could show on the screen when tuned in.  Flash memory is cheap now-a-days.

DRM support should be built-in, or at a 12 khz filter and firmware should be flashable to enable it (and future digital radio standards perhaps).

Also selectable LSB/USB, none of this forced LSB/USB of the DE-1102 and 1103 portables (below 10 mhz forces LSB, above USB).  Fine tuning should be like the ATS-909, in small steps, at the very least not with a tiny, hard-to-use thumbwheel.

And finally, provision for an add-on hardware board that perhaps could be used for XM or Sirius in the future or other Satelite radios.

It's interesting to note that during collisions with soviet subs, the US subs generally came away with more damage.  The reason is that the Russians often built their hulls out of titanium, since they sit on the bulk of the worlds reserves of the ore for that metal.  For the US, titanium is harder to come by although it is used for many of our fighter planes.  It's much stronger than the aluminum used for US sub hulls.

My Zenith Transoceanic, one of the older vacuum tube models, the G500.
By today's standards its big, like a suitcase. Glorious tone controlled
by several sound organ buttons. Off the huge SW whip it's still hot as
a firecracker sensitivity wise.

By the way, the detachable wave-magnet was supposed to be suction cupped onto the window of your commuter train or airliner. Can't you just imagine someone today boarding with such a mega boombox? :)

But around the home its more fun than all my modern rigs put together...

My Kenwood R-5000 has very good weak signal sensitivity.  The R8A and
NRD-535Db are not far behind.

Thanks Tom!

I'd appreciate it.  I work on a site with all the test equipment, and
if you could post the alignment procedures, it sure would be a help!

The Collins should win this contest hands down. Nothing, to my knowledge, ever had a lower noise floor. The story is that it was only limited by the Galactic background noise level. You can't do any better than that.

Before leaving the topic of noise and quiet receivers, I have a question. Tonight I was listening to a couple of Spanish language stations on 6185 and 6125 khz. On the Drake R8B, there was a background noise behind these signals and in fact behind most of the signals on this particular band. (It sounds like atmospheric noise--a vague, hissy sound that fades in and out a bit, just as the signal fades in and out). On the other hand, when I listened to these two stations on the Lowe HF-150, there was almost no trace of the noise. Both receivers were connected to the same antenna. I experimented with different power sources. Powering the R8B from it's internal power supply vs. an external power supply didn't have any effect on what I heard.

This noise isn't always there, although I've heard it before. What puzzles me is the Lowe receiver's failure to be affected by it. Why was it interfering with the Drake, but not the Lowe? The receivers were sitting right next to each other (I tried separating them, just for the heck of it, but it made no difference.)

Any thoughts?

Steve

Probably the most enjoyable as an armchair receiver was the Panasonic
RF-5000b.
It was Panasonic's luggable answer to the Zenith TO and Sony=AD World
Orbiter.  It was large, heavy around 22 pounds with an absolute=ADly
wonderful audio.  The polished metal and black case was wood=AD lined,
and the resulting sound was delightfully mellow.

It had four antennas, selectable filters (narrow was mechani=ADcal), agc
control, bfo, multiple bandswitches across the top and backl=ADighting
for individual bands as selected.  With a mortgage one could=AD power it
with batteries.  Otherwise a switchable voltage power supply=AD did the
trick.

It was no dx machine, but BBC symphonies sounded great.  Of =ADcourse
audio on AM and FM were superb.  With a bfo switch it was po=ADssible to
decode ssb.  Finding a specific station on the ham bands was
hit-or-miss and a challenge.  But the intent of this delight=ADful
monster was armchair listening to broadcast stations.

Sensitivity when new was not great by todays standards, and=AD 30 years had probably taken its toll on electronics.  Still it was a =ADjoy to use for 5 years.

Yeah, too few models equals too many dollars.

I rather figure that that's going to happen, but then
again, having another receiver around to verify
the signal helps too.

You know, I hadn't really considered an R-4 line receiver
much, maybe because the run for them was so long (into
what, the 80s?).  Considering that Dayton is practially
the heart of Drake country, I guess I ought to see plenty
of them around.  I'll have to keep an eye out for them.

On a similar note (not tube related, but about bargains
that can be had at Dayton), I passed on a Sony 2010
that someone was selling for $100 back in 2000.  I've
been kicking myself ever since I got back home...

There'll be no overlap.  Scanners are about VHF and UHF, while shortwave
is shortwave.  The scanners lower end would be where the upper end of
the shortwave receiver's tuning ends.

While once upon a time police was in the shortwave frequencies, well
technically medium wave since they were right above the AM broadcast
band pretty much any of those utilities that are now on the VHF and UHF
bands no longer use shortwave frequencies.

You will find some utility use in the shortwave bands, but it won't be
local like the scanner will receive.

  Michael

I know better, believe me.  I butchered a replacement
of an original speaker with a permanent one on an
old Hallicrafters S20R Sky Champion, and I've decided
if I'm going to fix things, I'm going to go slow and do
it right.

> Re older radios - I recently came across a nice Sears branded
Frog-7.

I won't.  Sears sold them??

Heh.  Wonder if he was putting it out to show off.

OTOH, I suspect that the pickings are getting slimmer
as eBay has worked it's way into the public conciousness.
That might change as some people (like me) prefer
to actually check the radio that I'm thinking of buying
out first.

One last thought.  If you don't mind going solid state boat anchor, the Kenwood R-300 is a blast to tune around using it's bandspread, xtal marker. It looks like it ought to have tubes, but the only comforting warm glow will be from the dial lights.

J: Definately return the Sony if the whip antenna will not rotate
smoothly, apparently its a very common problem. After extending the
base section of the whip straight up till you can see the bottom, it
will then be necessary to tug it up an inch or so more thus pulling out
the top of the mount it is connected to. It shold now rotate smoothly.
My old ICF SW7600 had a good antenna whip but I bent it up, it being
the only fragile thing on the radio which was bounced around off road
in a jeep for years, and still plays perfectly.

Hiya,

I have both the Sony 7600gr and the PL-550 which is the exact same radio as the E10.  The PL-550 is a nice radio, but the Sony 7600gr is the better performer in just about every category.  The only performance advantage that the PL-550 has over the Sony is audio quality.  The PL-550 has more defined and better sounding audio.  The Sony is way better for resolving signals.  The PL-550 in my experience  is also prone to overload and images.  The Sony is way more selective.  The ssb selectable AM sync on the Sony is also a great feature.  The PL-550 doesn't even have ssb capabilities.  The 7600gr is also a great radio for medium wave dx'ing.  Also... When I purchased my PL-550 brand new, I paid half of what the E10 is being sold for.  The PL-550 at $60.00 brand new is a TREMENDOUS value.  The E10 at $130.00 is not such a great deal considering it is in the same price range with a superior radio like the 7600gr.  I really love my PL-550, but I cant see how you'd want to pay for a new E10 over a new Sony 7600gr.  IMO, the 7600gr is the best of all the portables out there.  I even prefer it over the more expensive Sangean 909 for program listening.

Respectfully,

Michael

"Tom Sevart" <n2uhc.spam@yahoo.com> wrote in news:368726F4s39tgU1@individual.net:

I am mostly a broadcast SWLer, so I was thrown for a loop with this one. Very glitzy presentation, just like your local AM station (or FM) might be. I wasn't prepared for the USB aspect of the signal. I just happened to come across the frequency again the next day, and the signal was still good. I listened long enough to hear the "Air Force" mentioned on it, and from the pro-American stance on various topics, I figured that it had its origins here. A short search on the internet revealed more.

The software that I have been experimenting with permits rapid searching of a particular range of frequencies, ergo the contacts outside the range of my usual practices.

I believe that I logged Israel yesterday, an English language show. I was quite surprised. There is some irony in my logging though, the following:

"KOL ISRAEL OVERSEAS SERVICE SCHEDULE

From October 31, 2004 to March 26, 2005

Shortwave broadcasting is due to cease on March 31, 2005"

http://www.israelradio.org/sw.htm

Personally, I am not going to be lugging my laptop every where I go so that I can listen to streamed audio. It's unfortunate that the shortwave stations are falling like trees during a lumberjack competition.

I have had my fill with the lunatic Christian shows. Mind you (you'll think me insane), I am not speaking of Pastor Peters, but the plethora of bitter preachers that claim to be professing "the only" true word (Pastor Peters is comparatively sedate, though he can be crass). Even if you don't follow their preaching closely, they all offer contradicting beliefs, it maddening. It's like Gulliver's Travels, the one group of islanders that hates the other, since one side opens their hard boiled egg on the small end, the other group, the large end. It's still a freakin egg!

I can remember the all time classic just after 911, where one preacher claimed that any person that jumped out of the burning Trade Center buildings, that upon splatting on the ground, their souls continued on into hell (his words, not mine). I guess he viewed jumping from a burning building with no hope of survival was suicide, either that or he believed that since they likely didn't listen to his show, they must assuredly be destined for hell.

Anyway, I really enjoy shortwave, and am sorry to see broadcasters go every month. I have taken up listening to utilities, number stations, and waiting for Pirates to pop up. I shudder to think what may occupy the vacated frequencies. (see last 2 paragraphs).

Soliloquy

http://www.bookrags.com/notes/gt/PART2.htm

"The war between the two empires has gone on for six and thirty moons because of an edict starting by the king's grandfather on how to break an egg. According to Lilliputian law, people must break an egg by its small end. However, those who believe or desire to break an egg at its big end (the Big-Endians), continue to try, finding death or exile. Although Reldresal believes that it should be the prerogative of each individual Lilliputian on how to break an egg, he confesses that some 11,000 Lilliputians have lost their lives trying to change the law."
